1. What is a slide 'transition'?

Switching a presentation, or slide transition is the visual effect that occurs when you move from one slide to the next.

2. Why wouldn't you have your slides with different types of transitions?

When making transitions, you can choose one type only. If you use different transitions all the time, your presentation will look like it was made for a particular set of circumstances.

3. What is an Animation?

Adding life to any object in a program - graphics or text animation is all about.

4. What is the Animation Pane?

5. How many animation styles should be applied to a presentation? One style, 10 styles or 50 styles? Explain.

Just one will be the most effective as the range of animation. If you use a variety of animation, your presentation will look strange, clumsy and unprofessional.

6. What are Animations?

The PowerPoint animation feature lets you, the presenter, interact with your slides during a presentation. You can accomplish this by launching a presentation in Slide Show mode.
