Alfred Tarski Early Work In Poland Geometry And Teaching:

Alfred Tarski Andrew McFarland, Joanna McFarland, James T. Smith, 2014-08-11 Alfred Tarski 1901 1983 was a renowned Polish American mathematician a giant of the twentieth century who helped establish the foundations of geometry set theory model theory algebraic logic and universal algebra Throughout his career he taught mathematics and logic at universities and sometimes in secondary schools Many of his writings before 1939 were in Polish and remained inaccessible to most mathematicians and historians until now This self contained book focuses on Tarski s early contributions to geometry and mathematics education including the famous Banach Tarski paradoxical decomposition of a sphere as well as high school mathematical topics and pedagogy These themes are significant since Tarski s later research on geometry and its foundations stemmed in part from his early employment as a high school mathematics teacher and teacher trainer The book contains careful translations and much newly uncovered social background of these works written during Tarski s years in Poland Alfred Tarski Early Work in Poland serves the mathematical educational philosophical and historical communities by publishing Tarski s early writings in a broadly accessible form providing background from archival work in Poland and updating Tarski s bibliography A list of errata can be found on the author Smith s personal webpage

Alfred Tarski on Scientific Semantics David Hitchcock, Magda Stroińska, 2025-01-11 This book tells the story of the landmark event in modern logic whereby Alfred Tarski became the man who defined truth Alfred Tarski s classic monograph on truth became known internationally in 1935 when he presented its ideas in German at an international conference and collaborated in preparation of its German translation This book provides the first English translation of the Polish version of Tarski s conference paper which for purposes of comparison is printed side by side with a new exact English translation of the German version It offers for the first time a comprehensive and detailed analysis of the paper and for the first time a description and analysis of the discussion of the paper immediately after its presentation It discusses 22 substantive differences between the two versions The book also extracts from recently discovered correspondence about the German translation of the truth monograph how it was decided to produce such a translation the process of vetting and changing the translation changes requested by Tarski objections to the appeal to intuition in the Polish original supported by a list of those appeals with their replacements in the German and English translations other translational issues discrepancies other than those concerning appeals to intuition between the Polish original and its German translation the Keystone cops saga of Tarski s off prints and monetary matters It lists from

Tarski's journal his skiing mountaineering and tourist trips in 1935 and describes his companions on those trips An electronic supplement translates or summarizes the complete correspondence with comments and includes images from Tarski's journal of his itineraries of his 1935 trips with the editors explanatory comments

The Theory of Plane Area at the Crossroads Eduardo N. Giovannini, Edward Hermann Haeusler, Abel Lassalle Casanave, 2025-01-02 This book explores a cluster of philosophical historical and logical problems concerning the foundations of the theory of plane area in elementary geometry The motivation of this study is a notable geometrical proposition known as De Zolt's postulate which asserts that a polygon cannot be equal in area to a proper polygonal part The book is the first systematic investigation of the philosophical and foundational significance of this proposition which can also be described as the fundamental theorem of the theory of plane area This volume provides a comparative study of Euclid's development of the theory of area in the Elements and its modern reinterpretation in Hilbert's classical monograph Foundations of Geometry It connects the historical reflections on De Zolt's postulate with the nineteenth century program of providing a purely geometrical foundation for Euclidean geometry uncovering a rich array of intertwined conceptual problems It also shifts the perspective and provides a logical analysis of this geometrical postulate within an original development of the abstract theory of magnitudes called compatible magnitudes Finally it extends the previous formal treatment of De Zolt's postulate to the case of three dimensional geometry by producing a type system for polyhedral geometrical mereology The innovative combination of philosophical historical and logical perspectives results in a novel discussion of a fascinating problem at the crossroads of late nineteenth century geometry This volume will interest readers in the fields of history and philosophy of mathematics logic and formal philosophy

Development Of Mathematics Between The World Wars, The: Case Studies, Examples And Analyses Martina Becvarova, 2021-05-14 The Development of Mathematics Between the World Wars traces the transformation of scientific life within mathematical communities during the interwar period in Central and Eastern Europe specifically in Germany Russia Poland Hungary and Czechoslovakia Throughout the book in depth mathematical analyses and examples are included for the benefit of the reader World War I heavily affected academic life In European countries many talented researchers and students were killed in action and scientific activities were halted to

resume only in the postwar years However this inhibition turned out to be a catalyst for the birth of a new generation of mathematicians for the emergence of new ideas and theories and for the surprising creation of new and outstanding scientific schools The final four chapters are not restricted to Central and Eastern Europe and deal with the development of mathematics between World War I and World War II After describing the general state of mathematics at the end of the 19th century and the first third of the 20th century three case studies dealing with selected mathematical disciplines are presented set theory potential theory combinatorics in a way accessible to a broad audience of mathematicians as well as historians of mathematics
