Iteration Theory (Ecit 91) - Proceedings Of The European Conference J P Lampreia,Jaume Llibre,Christian Mira,Gyoergy Targonski,Jose Sousa Ramos,1992-12-18 The main theme of the ECIT conferences is Iteration Theory on the borderline between Dynamics and Functional Equations The aim is to foster symbiosis between mainstream dynamics and iteration theory treated in the style of functional equations theory The following topics are focused turbulence and iteration characterization of chaos kneading theory symbolic dynamics bifurcation periods of maps topological dynamics discrete retarded dynamical systems cellular automata as dynamical systems iterative roots of formal power series iterative roots of polynomials phantom iterative roots iterative groups and semigroups families of commuting functions algebraic aspects of iteration theory and functional equations *Iteration Theory (ECIT 91)*. Christian Mira,J. P. Lampreia,1991 **European Conference on Iteration Theory (ECIT 91)** ,1992 *European Conference on Iteration Theory (ECIT 91)* J. P. Lampreia,1992-01-01 **Chaotic Dynamics In Two-dimensional Noninvertible Maps** Alexandra Barugola,Jean-claude Cathala,Laura Gardini,Christian Mira,1996-07-29 This book is essentially devoted to complex properties Phase plane structure and bifurcations of two dimensional noninvertible maps i e maps having either a non unique inverse or no real inverse according to the plane point They constitute models of sets of discrete dynamical systems encountered in Engineering Control Signal Processing Electronics Physics Economics Life Sciences Compared to the studies made in the one dimensional case the two dimensional situation remained a long time in an underdeveloped state It is only since these last years that the interest for this research has increased Therefore the book purpose is to give a global presentation of a matter available till now only in a partial form Fundamental notions and tools such as critical manifolds as the most part of results are accompanied by many examples and figures Aggregating clones, colors, equations, iterates, numbers, and tiles Janos Aczel,2012-12-06 The journal *aequationes mathematicae* publishes papers in pure and applied mathematics and in particular articles on functional equations combinatorics and dynamical systems Its 50th volume appears in 1995 To mark this occasion we are publishing in book form a representative collection of outstanding survey papers assembled for our anniversary issue of *aequationes mathematicae* The articles by Quackenbush Targonski and Moszner discuss composition of functions from different points of view universal algebra dynamical systems iteration and functional equations The Ono Robbins Wahl and the Vince papers on number theory and tiles respectively are thematically linked by lattices Combinatorics in turn links the Vince paper with that of Tutte whose subject is chromatic sums its tools differential and functional equations The Paganoni Ratz and the Forti papers deal with conditional functional equations and with the related topic of stability Applications to the social and behavioral sciences in particular to aggregation and some theory are presented in the paper by J Aczel The aim of the collection is to survey selected fields of current interest We trust that it will be useful and informative for researchers teachers graduate and advanced undergraduate students of mathematics and for those interested in applications in related

Elaydi, G. Ladas, 2004-06-07 This volume comprises selected papers presented at the Sixth International Conference on Difference Equations which was held at Augsburg Germany It covers all themes in the fields of discrete dynamical systems and ordinary and partial difference equations classical and contemporary theoretical and applied It provides a useful reference text for graduates and researchers working in this area of mathematics **Iteration Theory (ECIT '06)** Gian Luigi Forti, 2007

Proceedings of the First International Conference on Difference Equations John R. Graef, Saber Elaydi, G. Ladas, 1995-12-01 The Eighth International Conference on Difference Equations and Applications was held at Masaryk University in Brno Czech Republic This volume comprises refereed papers presented at this conference Initially published in 2005 **Visions Of Nonlinear Science In The 21st Century** Wai-kai Chen, Jose L Huertas, Rabinder N Madan, 1999-07-03 Authoritative and visionary this festschrift features 12 highly readable expositions of virtually all currently active aspects of nonlinear science It has been painstakingly researched and written by leading scientists and eminent expositors including L Shilnikov R Seydel I Prigogine W Porod C Mira M Lakshmanan W Lauterborn A Holden H Haken C Grebogi E Doedel and L Chua each chapter addresses a current and intensively researched area of nonlinear science and chaos including nonlinear dynamics mathematics numerics and technology Handsomely produced with high resolution color graphics for enhanced readability this book has been carefully written at a high level of exposition and is somewhat self contained Each chapter includes a tutorial and background information as well as a survey of each area's main results and state of the art Of special interest to both beginners and seasoned researchers is the identification of future trends and challenging yet tractable problems that are likely to be solved before the end of the 21st century The visionary and provocative nature of this book makes it a valuable and lasting reference **Equadiff 95 - Proceedings Of The International Conference On Differential Equations** L Magalhaes, Carlos Rocha, L Sanchez, 1998-04-30 In this volume leading experts on differential equations address recent advances in the fields of ordinary differential equations and dynamical systems partial differential equations and calculus of variations and their related applications Chaos in Automatic Control Wilfrid Perruquetti, Jean-Pierre Barbot, 2018-10-03 Chaotic behavior arises in a variety of control settings In some cases it is beneficial to remove this behavior in others introducing or taking advantage of the existing chaotic components can be useful for example in cryptography Chaos in Automatic Control surveys the latest methods for inserting taking advantage of or removing chaos in a variety of applications This book supplies the theoretical and pedagogical basis of chaos in control systems along with new concepts and recent developments in the field Presented in three parts the book examines open loop

analysis closed loop control and applications of chaos in control systems The first section builds a background in the mathematics of ordinary differential and difference equations on which the remainder of the book is based It includes an introductory chapter by Christian Mira a pioneer in chaos research The next section explores solutions to problems arising in observation and control of closed loop chaotic control systems These include model independent control methods strategies such as H infinity and sliding modes polytopic observers normal forms using homogeneous transformations and observability normal forms The final section explores applications in wireless transmission optics power electronics and cryptography Chaos in Automatic Control distills the latest thinking in chaos while relating it to the most recent developments and applications in control It serves as a platform for developing more robust autonomous intelligent and adaptive systems

Iteration Theory - Proceedings Of The European Conference C Simo,Christian Mira,Gyoergy Targonski,Norbert Netzer,1991-07-22 The main topics of this proceedings stress the interactions between the theory of functional equations and the theory of dynamical systems A total of 38 invited lectures are included **Combinatorial Dynamics And Entropy In Dimension One (2nd Edition)** Luis Alsedá,Jaume Llibre,Michał Misiurewicz,2000-10-31 This book introduces the reader to the two main directions of one dimensional dynamics The first has its roots in the Sharkovskii theorem which describes the possible sets of periods of all cycles periodic orbits of a continuous map of an interval into itself The whole theory which was developed based on this theorem deals mainly with combinatorial objects permutations graphs etc it is called combinatorial dynamics The second direction has its main objective in measuring the complexity of a system or the degree of chaos present in it for that the topological entropy is used The book analyzes the combinatorial dynamics and topological entropy for the continuous maps of either an interval or the circle into itself **Annales Mathematicae Silesianae** ,1999 Probabilistic Normed Spaces Bernardo Lafuerza Guillen,Panackal Harikrishnan,2014-08-01 This book provides a comprehensive foundation in Probabilistic Normed PN Spaces for anyone conducting research in this field of mathematics and statistics It is the first to fully discuss the developments and the open problems of this highly relevant topic introduced by A N Serstnev in the early 1960s as a response to problems of best approximations in statistics The theory was revived by Claudi Alsina Bert Schweizer and Abe Sklar in 1993 who provided a new wider definition of a PN space which quickly became the standard adopted by all researchers This book is the first wholly up to date and thorough investigation of the properties uses and applications of PN spaces based on the standard definition Topics covered include The theory of PN spaces is relevant as a generalization of deterministic results of linear normed spaces and also in the study of random operator equations This introduction will therefore have broad relevance across mathematical and statistical research especially those working in probabilistic functional analysis and probabilistic geometry **Modern Techniques in Computational Chemistry: MOTECC-91** E. Clementi,1991-07-31 **Discrete Dynamics And Difference Equations - Proceedings Of The Twelfth International Conference On Difference Equations And Applications** Saber N Elaydi,Jose Manuel Ferreira,Henrique

Nonlinear Analysis and Variational Problems Panos M. Pardalos, Themistocles M. Rassias, Akhtar A. Khan, 2009-10-20 The chapters in this volume written by international experts from different fields of mathematics are devoted to honoring George Isac a renowned mathematician These contributions focus on recent developments in complementarity theory variational principles stability theory of functional equations nonsmooth optimization and several other important topics at the forefront of nonlinear analysis and optimization
