Book catalog of the Library and Information Services Division Environmental Science Information Center. Library and Information Services Division, 1977      **Representation Theory, Complex Analysis, and Integral Geometry** Bernhard Krötz, Omer Offen, Eitan Sayag, 2011-12-14 This volume targets graduate students and researchers in the fields of representation theory automorphic forms Hecke algebras harmonic analysis number theory      **Book Catalog of the Library and Information Services Division: Shelf List catalog** Environmental Science Information Center. Library and Information Services Division, 1977      **C-Projective Geometry** David M Calderbank, Michael G. Eastwood, Vladimir S. Matveev, Katharina Neusser, 2021-02-10 The authors develop in detail the theory of almost c projective geometry a natural analogue of projective differential geometry adapted to almost complex manifolds The authors realise it as a type of parabolic geometry and describe the associated Cartan or tractor connection A Kähler manifold gives rise to a c projective structure and this is one of the primary motivations for its study The existence of two or more Kähler metrics underlying a given c projective structure has many ramifications which the authors explore in depth As a consequence of this analysis they prove the Yano Obata Conjecture for complete Kähler manifolds if such a manifold admits a one parameter group of c projective transformations that are not affine then it is complex projective space equipped with a multiple of the Fubini Study metric

A. Akivis, B. A. Rosenfeld, 2011-07-14 This book describes the life and achievements of the great French mathematician Elie Cartan Here readers will find detailed descriptions of Cartan's discoveries in Lie groups and algebras associative algebras differential equations and differential geometry as well of later developments stemming from his ideas There is also a biographical sketch of Cartan's life A monumental tribute to a towering figure in the history of

mathematics this book will appeal to mathematicians and historians alike     *Connecting with Computability* Liesbeth De Mol, Andreas Weiermann, Florin Manea, David Fernández-Duque, 2021-07-01 This book constitutes the proceedings of the 17th Conference on Computability in Europe CiE 2021 organized by the University of Ghent in July 2021 Due to COVID 19 pandemic the conference was held virtually The 48 full papers presented in this volume were carefully reviewed and selected from 50 submissions CiE promotes the development of computability related science ranging over mathematics computer science and applications in various natural and engineering sciences such as physics and biology as well as related fields such as philosophy and history of computing CiE 2021 had as its motto Connecting with Computability a clear acknowledgement of the connecting and interdisciplinary nature of the conference series which is all the more important in a time where people are more than ever disconnected from one another due to the COVID 19 pandemic     Publishers' circular and booksellers' record ,1842     The Yang-Mills Heat Equation with Finite Action in Three Dimensions Leonard Gross, 2022-02-02 View the abstract     *Publishers' Circular* ,1842     **The Educational Landscape** ,2001     The Wild World of 4-Manifolds Alexandru Scorpan, 2022-01-26 What a wonderful book I strongly recommend this book to anyone especially graduate students interested in getting a sense of 4 manifolds MAA Reviews The book gives an excellent overview of 4 manifolds with many figures and historical notes Graduate students nonexperts and experts alike will enjoy browsing through it Robion C Kirby University of California Berkeley This book offers a panorama of the topology of simply connected smooth manifolds of dimension four Dimension four is unlike any other dimension it is large enough to have room for wild things to happen but small enough so that there is no room to undo the wildness For example only manifolds of dimension four can exhibit infinitely many distinct smooth structures Indeed their topology remains the least understood today To put things in context the book starts with a survey of higher dimensions and of topological 4 manifolds In the second part the main invariant of a 4 manifold the intersection form and its interaction with the topology of the manifold are investigated In the third part as an important source of examples complex surfaces are reviewed In the final fourth part of the book gauge theory is presented this differential geometric method has brought to light how unwieldy smooth 4 manifolds truly are and while bringing new insights has raised more questions than answers The structure of the book is modular organized into a main track of about two hundred pages augmented by extensive notes at the end of each chapter where many extra details proofs and developments are presented To help the reader the text is peppered with over 250 illustrations and has an extensive index     *Information Geometry and Its Applications* Nihat Ay, Paolo Gibilisco, František Matúš, 2018-11-03 The book gathers contributions from the fourth conference on Information Geometry and its Applications which was held on June 12 17 2016 at Liblice Castle Czech Republic on the occasion of Shun-ichi Amari's 80th birthday and was organized by the Czech Academy of Sciences Institute of Information Theory and Automation The conference received valuable financial support from the Max Planck Institute for Mathematics in the Sciences Information Theory of Cognitive Systems Group

Czech Academy of Sciences Institute of Information Theory and Automation and Universit degli Studi di Roma Tor Vergata

The aim of the conference was to highlight recent advances in the field of information geometry and to identify new research directions To this end the event brought together leading experts in the field who in invited talks and poster sessions discussed both theoretical work and achievements in the many fields of application in which information geometry plays an essential role

*Dirichlet Branes and Mirror Symmetry*, 2009 Research in string theory has generated a rich interaction with algebraic geometry with exciting new work that includes the Strominger Yau Zaslow conjecture This monograph builds on lectures at the 2002 Clay School on Geometry and String Theory that sought to bridge the gap between the languages of string theory and algebraic geometry presenting an updated discussion that includes subsequent developments The group of distinguished mathematicians and mathematical physicists who produced this monograph worked as a team to create a unique volume Its overall goal is to explore the physical and mathematical aspects of Dirichlet branes The narrative is organized around two principal ideas Kontsevich's Homological Mirror Symmetry conjecture and the Strominger Yau Zaslow conjecture The authors explain how Kontsevich's conjecture is equivalent to the identification of two different categories of Dirichlet branes They also explore the ramifications and current state of the Strominger Yau Zaslow conjecture They relate the ideas to active areas of research that include the McKay correspondence topological quantum field theory and stability structures The authors were not satisfied to tell their story twice from separate mathematics and physics points of view Instead theirs is a unified presentation offered in a way that both mathematicians and physicists can follow without having all of the foundations of both subjects at their immediate disposal

Handbook of Geometry and Topology of Singularities VII

José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2025-03-01 This is the seventh volume of the Handbook of Geometry and Topology of Singularities a series that aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research This volume consists of fourteen chapters that provide an in depth and reader friendly introduction to various important aspects of singularity theory The volume begins with an outstanding exposition on Jim Damon's contributions to singularity theory and its applications Jim passed away in 2022 and he was one of the greatest mathematicians of recent times having made remarkable contributions to singularity theory and its applications mostly to medical image computing The next chapter focuses on the singularities of real functions and their bifurcation sets Then we look at the perturbation theory of polynomials and linear operators complex analytic frontal singularities the global singularity theory of differentiable maps and the singularities of holomorphic functions from a global point of view The volume continues with an overview of new tools in singularity theory that spring from symplectic geometry and Floer type homology theories Then it looks at the derivation of Lie algebras of isolated singularities and the three dimensional rational isolated complete intersection singularities as well as recent developments in algebraic K stability and the stable degeneration conjecture This volume also contains an interesting survey on V filtrations a theory began by Malgrange and

Kashiwara that can be used to study nearby and vanishing cycle functors and introduced by Deligne Then we present a panoramic view of the Hodge toric and motivic methods in the study of Milnor fibers in singularity theory both from local and global points of view The Monodromy conjecture is also explained this is a longstanding open problem in singularity theory that lies at the crossroads of number theory algebra analysis geometry and topology This volume closes with recent developments in the study of the algebraic complexity of optimization problems in applied algebraic geometry and algebraic statistics The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook

**Geometric Inverse Problems** Gabriel P. Paternain, Mikko Salo, Gunther Uhlmann, 2023-01-05 This up to date treatment of recent developments in geometric inverse problems introduces graduate students and researchers to an exciting area of research With an emphasis on the two dimensional case topics covered include geodesic X ray transforms boundary rigidity tensor tomography attenuated X ray transforms and the Calder n problem The presentation is self contained and begins with the Radon transform and radial sound speeds as motivating examples The required geometric background is developed in detail in the context of simple manifolds with boundary An in depth analysis of various geodesic X ray transforms is carried out together with related uniqueness stability reconstruction and range characterization results Highlights include a proof of boundary rigidity for simple surfaces as well as scattering rigidity for connections The concluding chapter discusses current open problems and related topics The numerous exercises and examples make this book an excellent self study resource or text for a one semester course or seminar

Handbook of Geometry and Topology of Singularities V: Foliations Felipe Cano, José Luis Cisneros-Molina, Lê Dũng Tráng, José Seade, 2024-06-05 This is the fifth volume of the Handbook of Geometry and Topology of Singularities a series which aims to provide an accessible account of the state of the art of the subject its frontiers and its interactions with other areas of research Singularities are ubiquitous in mathematics and science in general and singularity theory is a crucible where different types of mathematical problems converge surprising connections are born and simple questions lead to ideas which resonate in other parts of the subject and in other subjects This Volume V focuses on singular holomorphic foliations which is a multidisciplinary field and a whole area of mathematics in itself Singular foliations arise for instance by considering The fibers of a smooth map between differentiable manifolds with singularities at the critical points The integral lines of a vector field or the action of a Lie group on a manifold The singularities are the orbits with special isotropy The kernel of appropriate 1 forms The singularities are the zeros of the form Open books which naturally appear in singularity theory as foliations with singular set the binding These important examples highlight the deep connections between foliations and singularity theory This volume like its companion Volume VI also focused on foliations consists of nine chapters authored by world experts which provide in depth and reader friendly introductions to some of the foundational aspects of the theory These introductions also give insights into important lines of further research The volume starts with a foreword by one of the current world leaders in the theory of complex

foliations The book is addressed to graduate students and newcomers to the theory as well as to specialists who can use it as a guidebook
