Positioning System Surveys and Geographic Information Systems **Growth Management for a Sustainable Future**
Gabor Zovanyi, 2001-03-30 Previous books on growth management in the United States favor balanced growth which
suggests that growth and environmental protection represent equally legitimate objectives Taking issue with the balanced
growth position this book argues that further growth is unsustainable and that growth management must focus on ensuring
ecological sustainability The book opens with the arguments supporting current global limits to growth and then shows that
the growth management movement in the United States represents an institutionalized form of ongoing growth
accommodation which is incongruous with sustainable behavior The book also documents the historical pro growth tendency
of the planning profession and contends that this bias is impeding the necessary transition to a sustainable future In addition
it presents the standards courts use to decide the legality of growth management programs and suggests that those
standards do not present insurmountable obstacles to stopping future growth In conclusion this book presents operational
measures of ecological sustainability and argues that the growth imperative currently driving the growth management
movement must be replaced by the imperative of ecological sustainability
