Name _____

- ✓ The final exam will be all multiple-choice. Come prepared with a pencil.
- ✓ Do not bring electronic devices to the exam (**other than a calculator**). This includes cell phones and mp3 players. If I see them I will take them.
- ✓ There will be no rest room passes until you are done with the test.
- ✓ I will provide a formula sheet (identical to one attached to this study guide) and a laminated periodic table.
- ✓ This study guide will be extra credit toward your final exam grade.
- ✓ **BRING A PENCIL AND A CALCULATOR!!!** Don't come to my final without these.
- ✓ The Chemistry Final Exam will count for 15% of your final semester grade. The exam will cover material from second semester. Some questions will require you to know material from first semester. Complete this review sheet on a separate sheet of paper. This review sheet covers all of the questions you will answer on the final exam, but be prepared to apply the knowledge on this study guide to other questions.

"Success is a state of mind. If you want success, start thinking of yourself as a success."

- ✓ Keys to success:
 - Complete this study guide.
 - Don't wait until Monday or Tuesday before finals to get help.
 - Start studying early. Remember, you have all summer to relax.
 - Be prepared.

Final exam topics:

representative of thousands of students who decisively improved their grades by acting on the advice described in this book. What is preventing your students from performing according to expectations? Sandra McGuire offers a simple but profound answer: If you teach students how to learn and give them simple straightforward strategies to use, they can significantly increase their learning and performance. For over a decade, Sandra McGuire has been acclaimed for her presentations and workshops on metacognition and student learning because the tools and strategies she shares have enabled faculty to facilitate dramatic improvements in student learning and success. This book encapsulates the model and ideas she has developed in the past fifteen years—ideas that are being adopted by an increasing number of faculty with considerable effect. The methods she proposes do not require restructuring courses or an inordinate amount of time to teach. They can often be accomplished in a single session, transforming students from memorizers and regurgitators to students who begin to think critically and take responsibility for their own learning. Sandra McGuire takes the reader sequentially through the ideas and strategies that students need to understand and implement. First, she demonstrates how introducing students to metacognition and Bloom's Taxonomy reveals to them the importance of understanding how they learn and provides the lens through which they can view learning activities and measure their intellectual growth. Next, she presents a specific study system that can quickly empower students to maximize their learning. Then, she addresses the importance of dealing with emotion, attitudes, and motivation by suggesting ways to change students' mindsets about ability and by providing a range of strategies to boost motivation and learning. Finally, she offers guidance to faculty on partnering with campus learning centers. She pays particular attention to academically unprepared students, noting that the strategies she offers for this particular population are equally beneficial for all students. While stressing that there are many ways to teach effectively and that readers can be flexible in picking and choosing among the strategies she presents, Sandra McGuire offers the reader a step-by-step process for delivering the key messages of the book to students in as little as 50 minutes. Free online supplements provide three slide sets and a sample video lecture. This book is written primarily for faculty but will be equally useful for TAs, tutors, and learning center professionals. For readers with no background in education or cognitive psychology, the book avoids jargon and esoteric theory.

Teaching General Chemistry Mansoor Niaz, 2008. The main objective of this monograph is to incorporate history and philosophy of science in the chemistry curriculum in order to provide students an overview of the dynamics of scientific research which involves controversies, conflicts, and rivalries among scientists that is the humanising aspects of science. A major thesis of this book is the parallel between the construction of knowledge by the students and the scientists. In looking for this relationship, it is not necessary that ontogeny recapitulate phylogeny but rather to establish that students can face similar difficulties in conceptualising problems as those faced by the scientists in the past. Given the vast amount of literature on students' alternative conceptions,

misconceptions in science it is plausible to suggest that these can be considered not as mistakes but rather as tentative models leading to greater conceptual understanding Just as scientists resist changes in the hard core of their beliefs by offering auxiliary hypotheses students may adopt similar strategies Conceptual change in science education can thus be conceptualised as building of tentative models that provide greater explanatory power to students understanding
