The *Vibration and Shock Handbook* is just such a reference. From its ambitious scope to its impressive list of contributors this handbook delivers all of the techniques, tools, instrumentation and data needed to model, analyze, monitor, modify and control vibration, shock, noise and acoustics. The Handbook's nine sections encompass fundamentals and analytical techniques, computer techniques, tools and signal analysis, shock and vibration methodologies, instrumentation and testing, vibration suppression, damping and control, monitoring and diagnosis, seismic vibration and related regulatory issues, system design, application and control, implementation and acoustics and noise suppression. The book also features an extensive glossary and convenient cross referencing, plus references at the end of each chapter. Brimming with illustrations, equations, examples and case studies, the *Vibration and Shock Handbook* is the most extensive, practical and comprehensive reference in the field. [Structural Engineering, Mechanics and Computation](#) A. Zingoni, 2001-03-16 Following on from the International Conference on Structural Engineering, Mechanics and Computation held in Cape Town in April 2001, this book contains the Proceedings in two volumes. There are over 170 papers written by Authors from around 40 countries worldwide. The contributions include 6 Keynote Papers and 12 Special Invited Papers. In line with the aims of the SEMC 2001 International Conference and as may be seen from the List of Contents, the papers cover a wide range of topics under a variety of themes. There is a healthy balance between papers of a theoretical nature concerned with various aspects of structural mechanics and computational issues and those of a more practical nature addressing issues of design, safety and construction. As the contributions in these Proceedings show, new and more efficient methods of structural analysis and numerical computation are being explored all the time while exciting structural materials such as glass have recently come onto the scene. Research interest in the repair and rehabilitation of existing infrastructure continues to grow particularly in Europe and North America while the challenges to protect human life and property against the effects
