Gil, 2023-04-13 This book offers a systematic study of control algorithms applied in the operation of solar membrane distillation SMD facilities After a short introduction to membrane distillation systems powered by solar energy it reports on the various stages of the development of a comprehensive operating strategy based on modelling control and optimization techniques which enables an improved operation of SMD plants helping the commercialization of the SMD technology A special focus of the research was to maximize the distillate production of the MD modules while reducing their thermal energy consumption being those two important weaknesses of the current technology as well as their minimizing operating costs The optimised operating strategies were tested in a real pilot plant located at Plataforma Solar de Almer a a dependency of the Centro de Investigaciones Energéticas Medioambientales y Tecnológicas CIEMAT of Spain All in all this thesis offers extensive information on control and modeling algorithms and on their practical applications in solar membrane distillation plants

Feature Papers Michael Henson, 2018-10-04 This book is a printed edition of the Special Issue Feature Papers that was published in Processes Transport of Water versus Transport over Water Carlos Ocampo-Martinez, Rudy R.

Negenborn,2015-06-03 This book aims at stimulating discussion between researchers working on state of the art approaches for operational control and design of transport of water on the one hand and researchers working on state of the art approaches for transport over water on the other hand The main contribution of the book as a whole is to present novel perspectives ultimately leading to the management of an envisioned unified management framework taking the recent advances from both worlds as a baseline The book is intended to be a reference for control oriented engineers who manage water systems with either or both purposes in mind transport of water transport of goods over water It highlights the possible twofold nature of water projects where water either acts as primary object of study or as a means The book is dedicated to comparing and relating to one another different strategies for operational management and control of different but strongly related systems in the framework of the water In that sense the book presents different approaches treating both the transport of water and transport over water It compares the different approaches within the same field highlighting their distinguishing features and advantages according to selected qualitative indices and demonstrates the interaction and cross relations between both fields It will also help to determine the gaps and common points for both fields towards the design of such a unifying framework which is lacking in the literature Additionally the book looks at case studies where the design of modeling control strategies of either transport of water or transport over water have been proposed discussed or simulated *Technological Developments in Education and Automation* Magued Iskander,Vikram Kapila,Mohammad A.

Intelligent Monitoring, Control, and Security of Critical Infrastructure Systems Elias Kyriakides, Marios Polycarpou, 2014-09-13 This book describes the challenges that critical infrastructure systems face and presents state of the art solutions to address them How can we design intelligent systems or intelligent agents that can make appropriate real time decisions in the management of such large scale complex systems What are the primary challenges for critical infrastructure systems The book also provides readers with the relevant

information to recognize how important infrastructures are and their role in connection with a society's economy security and prosperity. It goes on to describe state-of-the-art solutions to address these points including new methodologies and instrumentation tools e.g. embedded software and intelligent algorithms for transforming and optimizing target infrastructures. The book is the most comprehensive resource to date for professionals in both the private and public sectors while also offering an essential guide for students and researchers in the areas of modeling and analysis of critical infrastructure systems monitoring control risk impact evaluation fault diagnosis fault tolerant control and infrastructure dependencies interdependencies. The importance of the research presented in the book is reflected in the fact that currently for the first time in human history more people live in cities than in rural areas and that by 2050 roughly 70% of the world's total population is expected to live in cities.
