Role of Protein-Protein Interactions in Metabolism: Genetics, Structure, Function, 2nd Edition

Amit V. Pandey, Colin J. Henderson, Yuji Ishii, Michel Kranendonk, Wayne L. Backes, Ulrich M. Zanger, 2018-06-20 Genetic variations may change the structure and function of individual proteins as well as affect their interactions with other proteins and thereby impact metabolic processes dependent on protein protein interactions For example cytochrome P450 proteins which metabolize a vast array of drugs steroids and other xenobiotics are dependent on interactions with redox and allosteric partner proteins for their localization stability catalytic function and metabolic diversity reactions Genetic variations may impact such interactions by changing the splicing and or amino acid sequence which in turn may impact protein topology localization post translational modifications and three dimensional structure More generally research on single gene defects and their role in disease as well as recent large scale sequencing studies suggest that a large number of genetic variations may contribute to disease not only by affecting gene function or expression but also by modulating complex protein interaction networks The aim of this research topic is to bring together researchers working in the area of drug steroid and xenobiotic metabolism who are studying protein protein interactions to describe their recent advances in the field We are aiming for a comprehensive analysis of the subject from different approaches including genetics proteomics transcriptomics structural biology biochemistry and pharmacology Of particular interest are papers dealing with translational research describing the role of novel genetic variations altering protein protein interaction Authors may submit original articles reviews and opinion or hypothesis papers dealing with the role of protein protein interactions in health and disease Potential topics include but are not limited to Role of protein protein interactions in xenobiotic metabolism by cytochrome P450s and other drug metabolism enzymes Role of classical and novel interaction partners for cytochrome P450 dependent metabolism

which may include interactions with redox partners interactions with other P450 enzymes to form P450 dimers multimers
 P450 UGT interactions and proteins involved in posttranslational modification of P450s Effect of genetic variations mutations
 and polymorphisms on metabolism affected by protein protein interactions Structural implications of mutations and
 polymorphisms on protein protein interactions Functional characterization of protein protein interactions Analysis of protein
 protein interaction networks in health and disease Regulatory mechanisms governing metabolic processes based on protein
 protein interactions Experimental approaches for identification of new protein protein interactions including changes caused
 by mutations and polymorphisms
