

LIZARD EVOLUTION VIRTUAL LAB

Directions: Begin in the Introduction Tab. Read the Introduction and watch the Welcome to the Lizard Evolution Lab. Answer the following questions as you finish each module of the virtual lab.

Click on **Module 1: Ecomorphs** and follow the directions as you work through the information.

1. At the beginning of the virtual lab, you were asked to sort eight lizards into categories. What criteria did you initially use to make your groups? Did you revise your criteria later? Why?

I based my criteria off of the legs. I chose the size of the legs because I think that each of the different anoles had evolved based on their habitat. I did not revise my criteria.

2. An adaptation is a structure or function that is common in a population because it enhances the ability to survive and reproduce in a particular environment. Provide one example and an explanation of one adaptation in the Anolis lizards. One adaptation is the short legs on the sheplani hispaniola anolis lizard. I think this is because of the slim branches it was on. The shorter legs made it easier for the lizard to hold onto the slimmer branches.
3. Provide one evolutionary explanation for why lizards living in the same part of the habitat (i.e., grass) would have similar characteristics. Lizards in the same habitat would have similar characteristics because there are many ways to do something, however there is only one way that is the best for surviving. Basically, lizards in the same habitat have the characteristics that are most fit for survival, so most lizards in that habitat would exhibit those most fit characteristics.
4. What is an ecomorph? Provide one example from the virtual lab. Ecomorphs are species with similar body types and habitats. An example is how the sheplani Hispaniola and occultus Puerto Rico lizards both have short legs.

Lizard Evolution Virtual Lab Answers

Vincent Bels,Anthony Russell

A red circular graphic with a gradient, appearing as a partial circle or a thick curved line, located to the right of the authors' names.

Lizard Evolution Virtual Lab Answers:

New Scientist, 1994 **Behavior of Lizards** Vincent Bels, Anthony Russell, 2019-02-06 Key features Presents a contemporary snapshot of the mechanisms underlying the evolution and adaptation of behavior Explores how genetics epigenetics development and environment shape behavior Discusses a broad range of behavioral repertoires and responses including those related to thermoregulatory foraging predatory displaying social and escape strategies Examines physiological and sensory mechanisms Covers the effects of various aspects of global change on behavior with chapters that focus on the impacts of climate change on hydroregulatory behavior and behavioral responses to the effects of habitat alteration resulting from human mediated change and colonization by invasive species Lizards serve as focal organisms for many of biological questions related to evolution ecology physiology and morphology They are studied at multiple spatial and temporal scales from the individual to the community level This book authored by expert contributors from around the world explores behaviors underlying the evolution and adaptation of these organisms It covers conceptual empirical and methodological approaches to the understanding of the role that natural and sexual selection play in molding the behavioral traits of lizards This thorough illustrated reference should stimulate discussion of the conceptual and methodological approaches for studying the behavioral traits of these fascinating and highly diverse vertebrates

Reviewing **Lizard Evolution Virtual Lab Answers**: Unlocking the Spellbinding Force of Linguistics
