**QUESTION 4**

In the diagram below, the angle between line AB and the x-axis is  $\beta$ . The angle between line CD and the x-axis is  $\theta$ . A and D are the x-axis intercept points for lines AB and CD respectively. The coordinates of point B are  $(\sqrt{3}, 2)$ .

The intercept point E, of lines AB and CD lies on the y-axis.  $\angle EDC = 63,69^\circ$

**Language and Neoliberalism** Marnie Holborow, 2015-02-20 Language and Neoliberalism examines the ways in which neoliberalism or the ideology of market rule finds expression in language In this groundbreaking original study Holborow shows at once the misleading character of ideological meaning and the underlying social reality from which that meaning emerges In universities it is now the norm to use terms like entrepreneurial and business partnerships How have these terms become a core component of education and gained such force Markets have become metaphorically a power in their own right They now tell governments how to act and warn them against too much public spending Post crash the capitalist market continues to be crisis prone and in that context the neoliberal ideology remains contested Free of jargon and assuming no

models to elucidate key ideas and promote practical modelbuilding The book begins by illustrating the fundamentals of linear models such as how the model fitting projects the data onto a model vector subspace and how orthogonal decompositions of the data yield information about the effects of explanatory variables Subsequently the book covers the most popular generalized linear models which include binomial and multinomial logistic regression for categorical data and Poisson and negative binomial loglinear models for count data Focusing on the theoretical underpinnings of these models Foundations of Linear and Generalized Linear Models also features An introduction to quasi likelihood methods that require weaker distributional assumptions such as generalized estimating equation methods An overview of linear mixed models and generalized linear mixed models with random effects for clustered correlated data Bayesian modeling and extensions to handle problematic cases such as high dimensional problems Numerous examples that use R software for all text data analyses More than 400 exercises for readers to practice and extend the theory methods and data analysis A supplementary website with datasets for the examples and exercises An invaluable textbook for upper undergraduate and graduate level students in statistics and biostatistics courses Foundations of Linear and Generalized Linear Models is also an excellent reference for practicing statisticians and biostatisticians as well as anyone who is interested in learning about the most important statistical models for analyzing data

**Microbial Ecology in the North Pacific Subtropical Gyre** Samuel T. Wilson, Matthew J. Church, 2018-11-16 The microbial community in the oligotrophic North Pacific Subtropical Gyre is dominated by unicellular microorganisms less than a few micrometers in size Despite the persistent low nutrient concentrations phytoplankton growth rates appear near maximal sustained by the recycling of nutrients with plankton population sizes regulated by processes such as zooplankton grazing and viral lysis Seasonal pulses of particle export to the deep sea and increases in phytoplankton abundance occur during the summer months however the factors that result in these imbalances in growth and loss processes are not well understood Nonetheless as a result of persistent fieldwork and development of sensitive methodologies the biogeochemical and ecological dynamics occurring over timescales ranging from diel to interannual are being revealed This Research Topic covers multiple aspects of microbial oceanography in the oligotrophic North Pacific Subtropical Gyre including identification and isolation of microorganisms quantification of microbial biomass and turnover metabolism and physiological activities and microbial mediated biogeochemical cycling All of the papers use field data collected by either the Hawaii Ocean Time series HOT program the Center for Microbial Oceanography Research and Education C MORE or the Simons Collaboration on Ocean Processes and Ecology SCOPE These three programs have greatly increased our understanding of microbial ecology and biogeochemical
