He, 2022-03-29 Microbial Cross-talk in the Rhizosphere Benjamin A. Horwitz, Prasun K. Mukherjee, 2022-06-08 This book discusses the cross talk between plants and microbes in the rhizosphere The rhizosphere is the hotspot of microbial activities

that influence plant growth and crop yield The rhizosphere residing microbes include the nitrogen fixing rhizobia mycorrhizal fungi antibiotic producing bacteria antagonistic plant beneficial fungi and entomopathogens The three way cross talk among the plants the pathogens and other microbes involves signaling molecules metabolites and physical interactions The book also describes deleterious and beneficial aspects of this communication between plants and microbes Plants program the local microbiome near their roots and the microbial community has a profound influence on the functioning of the plant This complex communication makes the collection of chapters a timely one because the diverse subjects are linked by their focus on the molecular language of plant microbe cross talk This timely and informative book is useful for students and researchers in the fields of microbiology soil biology and plant pathology

Plant growth-promoting bacteria as key tool for future agriculture: agronomic, molecular and omics approaches José David Flores Félix, Reiner Rincon Rosales, Victor Manuel Ruiz-Valdiviezo, Clara Ivette Rincon Molina, 2023-11-15 Currently agriculture is at a crossroads similar to that experienced at the beginning of the last century The growing need to supply food to global markets and the incipient climate is expected to jeopardize the current agricultural systems This situation requires a rethinking of agricultural production systems and it is clearly necessary to incorporate new tools and agronomic practices that improve efficiency and sustainability A key factor can be identified in using resources or the competition of crops to resist biotic and abiotic stresses Plant growth promoting bacteria PGPB are of outstanding utility due to the multiple mechanisms with which they influence plant development It is fundamental at these crossroads to delve deeper into the mechanisms by which PGPB can improve the development of plants in the soil at the phenotypic level Biochemical methods incorporating genomic transcriptomic proteomic and metabolomic analyses can help us understand these interactions In addition omics techniques will make it possible to create a complete and complex vision using big data technologies spurring new strategies to achieve an agriculture with a greater degree of integration of the environment and greater efficiency of production with reduced risk to human

Periodic Mesoporous Organosilicas Chang-Sik Ha, Sung Soo Park, 2018-11-07 This book provides a comprehensive overview of the fundamental properties preparation routes and applications of a novel class of organic inorganic nanocomposites known as periodic mesoporous organosilicas PMOs Mesoporous silicas are amorphous inorganic materials which have silicon and oxygen atoms in their framework with pore size ranging from 2 to 50 nm They can be synthesized from surfactants as templates for the polycondensation of various silicon sources such as tetraalkoxysilane In general mesoporous silica materials possess high surface areas tunable pore diameters high pore volumes and well uniformly organized porosity The stable chemical property and the variable ability for chemical modification makes them ideal for many applications such as drug carrier sensor separation catalyst and adsorbent Among such mesoporous silicas in 1999 three groups in Canada Germany and Japan independently developed a novel class of

organic inorganic nanocomposites known as periodic mesoporous organosilicas PMOs The organic functional groups in the frameworks of these solids allow tuning of their surface properties and modification of the bulk properties of the material The book discusses the properties of PMOs their preparation different functionalities and morphology before going on to applications in fields such as catalysis drug delivery sensing optics electronic devices environmental applications gas sensing and gas adsorption biomolecule adsorption and chromatography The book provides fundamental understanding of PMOs and their advanced applications for general materials chemists and is an excellent guide to these promising novel materials for graduate students majoring in chemical engineering chemistry polymer science and materials science and engineering

Walker, Emmanuelle Jacquin-Joly, Sharon R. Hill, 2016-06-11 Olfaction and taste are of critical importance to insects and other animals since vital behaviours including mate food and host seeking as well as predator and toxin avoidance are guided by chemosensory cues Mate and habitat choice are to a large extent determined by chemical signals and chemoreceptors contribute accordingly to pre mating isolation barriers and speciation In addition to fundamental physiological ecological and evolutionary consideration the knowledge of insect taste and especially olfaction is also of great importance to human economies since it facilitates a more informed approach to the management of insect pests of agricultural crops and forests and insect vectors of disease Chemoreceptors which bind to external chemical signals and then transform and send the sensory information to the brain are at the core of the peripheral olfactory and gustatory system and have thus been the focus of recent research in chemical ecology Specifically emphasis has been placed on functional characterization of olfactory receptor genes which are derived from three large gene families namely the odorant receptors gustatory receptors and ionotropic receptors Spatial expression patterns of olfactory receptors in diverse chemosensory tissues provide information on divergent functions with regards to ecologically relevant behaviours On the

other hand characterization of olfactory receptor activation profiles or deorphanization provides complimentary data on the molecular range of receptivity to the fundamental unit of the olfactory sense The aim of this Research Topic is to give an update on the breadth and depth of research currently in progress related to understanding the molecular mechanisms of insect chemoreception with specific emphasis on the olfactory receptors
