Tribology of Abrasive Machining Processes Ioan D. Marinescu, W. Brian Rowe, Boris Dimitrov, Hitoshi Ohmori, 2012-12-07
This book draws upon the science of tribology to understand predict and improve abrasive machining processes Pulling together information on how abrasives work the authors who are renowned experts in abrasive technology demonstrate how tribology can be applied as a tool to improve abrasive machining processes Each of the main elements of the abrasive machining system are looked at and the tribological factors that control the efficiency and quality of the processes are described Since grinding is by far the most commonly employed abrasive machining process it is dealt with in particular detail Solutions are posed to many of the most commonly experienced industrial problems such as poor accuracy poor surface quality rapid wheel wear vibrations work piece burn and high process costs This practical approach makes this book an essential tool for practicing engineers Uses the science of tribology to improve understanding and of abrasive machining processes in order to increase performance productivity and surface quality of final products A comprehensive reference on how abrasives work covering kinematics heat transfer thermal stresses molecular dynamics fluids and the tribology of lubricants Authoritative and ground breaking in its first edition the 2nd edition includes 30% new and updated material including new topics such as CMP Chemical Mechanical Polishing and precision machining for micro and nano scale applications

Machining of Complex Sculptured Surfaces J. Paulo Davim, 2012-01-03 The machining of complex sculptured surfaces is a global technological topic in modern manufacturing with relevance in both industrialized and emerging in countries particularly within the moulds and dies sector whose applications include highly technological industries such as the automotive and aircraft industry Machining of Complex Sculptured Surfaces considers new approaches to the manufacture of moulds and dies within these industries The traditional technology employed in the manufacture of moulds and dies combined conventional milling and electro discharge machining EDM but this has been replaced with high speed milling HSM which has been applied in roughing semi finishing and finishing of moulds and dies with great success Machining of Complex Sculptured Surfaces provides recent information on machining of complex sculptured surfaces including modern CAM systems and process planning for three and five axis machining as well as explanations of the advantages of HSM over traditional methods ranging from work piece precision and roughness to manual polishing following machining operations Whilst primarily intended for engineering students and post graduates particularly in the fields of mechanical manufacturing or materials Machining of Complex Sculptured Surfaces provides clear instructions on modern manufacturing serving as a practical resource for all academics researchers engineers and industry professionals with interest in the machining of complex sculptured surfaces
