Human Rights in Language and STEM Education Zehlia Babaci-WilHITE, 2016-03-22. This volume explores the challenges of teaching and learning Science, Technology, Engineering, and Mathematics (STEM) subjects in local languages and local contexts in a range of countries around the world. Many countries around the world, including African countries, have been largely excluded from the transformation that is going on in STEM pedagogy in the USA, where the emphasis is on the importance of language choice and the development of English Language Learner (ELL) STEM subjects. In many parts of the world, STEM subjects have been taught in a global language, mainly English, rather than using a local language and local curriculum. This creates pedagogical challenges to the teaching of STEM. The contributions to this book review evidence and arguments for the teaching of STEM subjects in local languages, and several chapters make the case that this should be considered a human right, both in national educational programs and in development aid. Working across disciplines and domains has the potential to lead to new understanding and the removal of barriers to progress, with the ultimate goal of creating solutions to persistent problems in education. Cross-disciplinary work in science, language, and literacy has shown much promise and demonstrated the importance of developing language along

with disciplinary knowledge This volume provides a deep dive into this topic with articles by several scholars in the field of language in STEM Jaqueline Barber Director of the Learning Design Group at the Lawrence Hall of Science University of California Berkeley USA In an increasingly technological world STEM Education has become a priority on national agendas and in educational institutions Meaningful access to STEM education can enable or hinder young people from gaining entry into the world of work It is against this backdrop that the edited collection Human Rights and Language in STEM Education needs to be welcomed The various chapters tackle the big questions of access and many others This edited collection is required reading for all those working in STEM and for policy makers who tend to see language and STEM as binaries rather than as interdependent Zubeida Desai Professor and Dean of Education University of the Western Cape South Africa This volume by researchers from 10 countries provides a thought and action provoking multidimensional analysis of issues on the dignity of the use of STEM subjects in local education in the perspective of human rights This book is especially recommended to researchers and education policy makers in such areas as STEM Educational Theory and Praxis Human Rights Future sustainable Development Science and Technology Literacy May it inspire similar volumes in today s politically ebullient world Francisco Gomes de Matos Professor Emeritus of Linguistics human linguistic rights scholar Federal University of Pernambuco Recife Brazil
