

Barriers to Trade

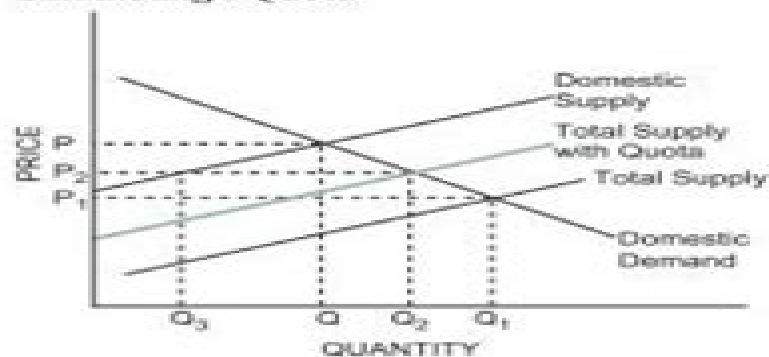

Part A

Quotas

1. Use Figure 51.3 to demonstrate what will happen to the domestic price, domestic production and the amount of imports if a quota is removed. The Domestic Supply and Total Supply curves on the graph are without any barriers to trade imposed. Be sure to show on the graph the supply curve with the quota. It is not on the graph now.

Figure 51.3
Eliminating a Quota

If there were a complete import ban, the equilibrium domestic price would be P and the equilibrium quantity would be Q with the commodity completely produced by the domestic industry. If there were a partial quota, the supply curve labeled Total Supply with Quota would be the relevant curve. The domestic price and quantity would be P_2 and Q_2 . The amount of the quota would be $(Q_2 - Q_3)$. Domestic production will be Q_3 . Removing the quota and moving to the free trade equilibrium, the domestic consumers will pay P_1 and purchase Q_1 . Removal of a quota has led to a decrease in price and an increase in the quantity consumed. In the case illustrated, there will be zero domestic production under free trade.

Advanced Placement Economics John S. Morton, Rae Jean B. Goodman, 2003 Principles of Macroeconomics, 9th Edition N. Gregory Mankiw, Ronald D. Kneebone, Kenneth J. McKenzie, 2023-02-01 Principles of Macroeconomics Ninth Canadian Edition breaks down concepts and emphasizes important themes for students. It is the most widely used economics textbook on the market, perfectly complementing instructor lessons. Students should expect to gain a solid understanding of economic theory through real world applications. While it prepares students for advanced economics studies, it also speaks to people in other fields. Mankiw stresses big picture ideas, ensuring learners are grounded in essential economic concepts and principles.

Modeling Economic Instability Michaël Assous, Vincent Carret, 2022-01-31 This book offers a fresh perspective on the early history of macroeconomics by examining the macro dynamic models developed from the late 1920s to the late 1940s and their treatment of economic instability. It first explores the differences and similarities between the early mathematical business cycle models developed by Ragnar Frisch, Michal Kalecki, Jan Tinbergen, and others, which were presented at meetings of the Econometric Society and discussed in private correspondence. By doing so, it demonstrates the diversity of models representing economic phenomena and especially economic crises and instability. Jan Tinbergen emerged as one of the most original and pivotal economists of this period, before becoming a leader of the macro econometric movement, a role for which he is better known. His emphasis on economic policy was later mirrored in the United States in Paul Samuelson's early work on business cycles analysis, which drawing on Alvin Hansen, aimed at interpreting the 1937-1938 recession. The authors then show that the subsequent shift in Samuelson's approach from the study of business cycle trajectories to the comparison of equilibrium points provided a response to the econometricians' critique of early Keynesian models. In the early 1940s, Samuelson was able to link together the tools that had been developed by the econometricians and the economic content that was at the heart of the so-called Keynesian revolution. The problem then shifted from business cycle trajectories to the disequilibrium between economic aggregates and the issues raised by the global stability of full employment equilibrium. This was addressed by Oskar Lange, who presented an analysis of market coordination failures, and Lawrence Klein, Samuelson's first PhD student, who pursued empirical work in this direction. The book highlights the various visions and approaches that were embedded in these macro dynamic models and that their originality is of interest to today's model builders as well as to students and anyone interested in how new economic ideas come to be developed.
