Essays on Roberto Gerhard Monty Adkins, Michael Russ, 2017-03-07 For much of the mid twentieth century Roberto Gerhard found himself an outsider He was airbrushed from much writing on contemporary music in Spain during the Franco regime and was known in England more for his commercial music for theatre film and radio than his concert works However his significance as a musical innovator in developing serial technique and in the field of electro acoustics is now being gradually recognised in both Spain and England as well as further

afield The volume explores an extensive range of Gerhard's work from the early Wind Quintet and the Spanish ballets Pandora and Don Quixote with their overt political overtones through to the late period Metamorphoses and a newly discovered chance based composition Claustrophilia written in response to a request by John Cage for his book Notations One of the key themes presented throughout the book is Gerhard's innovative use of serialism Gerhard's development of Schoenberg's technique led him to explore the serialization of both pitch and time This volume suggests evidence for the first time that situates Gerhard's idiosyncratic experiments alongside rather than after the total serialist works of his European counterparts Pierre Boulez Olivier Messiaen and Karlheinz Stockhausen *The Leptonic Magnetic Monopole - Theory and Experiments*, 2015-05-14 Advances in Imaging and Electron Physics merges two long running serials Advances in Electronics and Electron Physics and Advances in Optical and Electron Microscopy The series features extended articles on the physics of electron devices especially semiconductor devices particle optics at high and low energies microlithography image science and digital image processing electromagnetic wave propagation electron microscopy and the computing methods used in all these domains Contributions from leading authorities Informs and updates on all the latest developments in the field

Magnetic Resonance Imaging in Orthopedic Sports Medicine Robert Pedowitz, Christine B. Chung, Donald Resnick, 2008-12-01 This book grew from the commonsense notion that orthopedic surgeons and sports medicine clinicians need to understand the practical application and interpretation of magnetic resonance imaging MRI for the sake of their clinical practices while radiologists need broad clinical perspective in order to provide the best and most accurate MRI information upon which patient care decisions must be made As obvious as that notion might be relatively little emphasis was placed upon genuine interdisciplinary MRI education for practicing doctors especially at the early advent of MRI technology This need is now much better recognized evidenced by the growth of excellent lecture based educational opportunities Examples include interdisciplinary instructional courses taught by both radiologists and orthopedic surgeons at the Radiological Society of North America and the American Academy of Orthopaedic Surgeons over the last half decade What has been missing from the educational landscape has been a focused practical reference that would integrate the basic needs of radiologists and clinicians alike This was the impetus for the current book which has been an extraordinary cooperative venture by authors who were asked to bridge that gap in a single resource orthopedic surgeons and sports medicine specialists writing for the sake of their radiology colleagues and radiologists writing for the benefit of their clinician partners

The Spinning Magnet Alanna Mitchell, 2018-01-30 The mystery of Earth's invisible life supporting power Alanna Mitchell's globe trotting history of the science of electromagnetism and the Earth's magnetic field right up to the latest indications that the North and South Poles may soon reverse with apocalyptic results will soon change the way you think about our planet Award winning journalist Alanna Mitchell's science storytelling introduce intriguing characters from the thirteenth century French investigations into magnetism and the Victorian era discover that electricity and magnetism emerge from the same fundamental force to the latest research No one has ever told so eloquently how the Earth itself came to be seen as a magnet spinning in space with two poles and that those poles have dramatically reversed many time often coinciding with mass extinctions The most recent reversal was 780 000 years ago Mitchell explores indications that the Earth's magnetic

force field is decaying faster than previously thought When the poles switch a process that takes many years the Earth is unprotected from solar radiation storms that would among other disturbances wipe out much and possibly all of our electromagnetic technology Navigation for all kinds of animals is disrupted without a stable magnetic North Pole But can you imagine no satellites no Internet no smartphones maybe no power grids at all Alanna Mitchell offers a beautifully crafted narrative history of surprising ideas and science illuminating invisible parts of our own planet that are constantly changing around us

The Antarctic Dictionary Bernadette Hince, 2000-11-10 The world's most isolated continent has spawned some of the most unusual words in the English language In the space of a mere century a remarkable vocabulary has evolved to deal with the extraordinary environment and living organisms of the Antarctic and subantarctic Here for the first time is a complete guide to the origin and definitions of Antarctic words Like other historical dictionaries The Antarctic Dictionary gives the reader quotations for each word These quotations are the life blood of the dictionary more than 15 000 quotations from about 1000 different sources give the reader a unique insight into the way the language of Antarctica has evolved The reader will find out what it means to be slotted the shortcomings of homers the joys of a dingo and the hazards of a growler The Antarctic Dictionary has been meticulously researched and will appeal to all those who have been to the frozen continent or have ever dreamed of going there It will also appeal to those fascinated by the development of language With a forward by Sir Ranulph Fiennes
