Remanufacturing Initiation for Original Equipment Manufacturers Johan Vogt Duberg, 2024-04-29

Remanufacturing is an industrial process in which a core a used discarded or broken product is transformed into a product with a like new specification and condition However to this date remanufacturing activities on the market are few compared to manufacturing There are several types of remanufacturers the least common type is the original equipment remanufacturer an original equipment manufacturer that not only manufactures new products but also remanufactures cores of its own products Remanufacturing is potentially becoming a more widely used industrial process for original equipment manufacturers and increased remanufacturing activities can positively contribute to the environment The contribution comes from a reduction of raw material and energy consumption compared to manufacturing Therefore remanufacturing has the potential to decouple environmental impact from economic growth thus contributing to more sustainable societies However assessing the benefits of remanufacturing does not directly correlate to growth within the remanufacturing industry To encapsulate the environmental social and economic benefits of remanufacturing manufacturers need to be aware of how remanufacturing can be initiated and implemented in practice Therefore the objective of this dissertation is to develop support measures for original equipment manufacturers to initiate profitable remanufacturing This research takes a stand in case study and transdisciplinary research where the initiation of profitable remanufacturing is studied at two original equipment manufacturers The research study developed knowledge of how remanufacturing could be incorporated into existing operations at original equipment manufacturers In parallel financial assessments based on cost benefit analysis were

built to measure how well the case companies could perform remanufacturing For the case study research seven remanufacturing scenarios were developed ranging from centralised remanufacturing performed by the original equipment manufacturer to decentralised performed at multiple locations using a retail network Which scenario is preferable depends on for example risk consciousness cooperation between actors and volume targets However given ideal circumstances remanufacturing in house in a centralised scenario was shown to be the most beneficial for the investigated original equipment manufacturer since the fewer middle hands and economies of scale also potentially enable lower costs For the transdisciplinary research the remanufacturing initiation was business model centric meaning that the remanufacturing system was a consequence of a decision for a specific business model Here a scenario based analysis was developed to understand under which circumstances the business model with remanufacturing was more lucrative for the provider the original equipment manufacturer and less costly for the users the customers For this a systematic assessment approach was developed consisting of three steps 1 provide a cost overview for each business model 2 create scenarios by modifying the cost drivers and 3 combine scenarios to reach synergetic effects Based on the case study two sets of four prerequisites for initiating remanufacturing were derived These are divided into essential and supporting prerequisites and illustrated through a framework called the Remanufacturing Rocket The essential prerequisites highlight fundamental requirements to perform remanufacturing Should one of these four factors be missing remanufacturing cannot be successfully initiated The supporting prerequisites are valuable to enhance the effectiveness and efficiency of the process such as through streamlined operations organisational change or information exchange Hence to reach the fullest potential of remanufacturing both the essential and the supporting prerequisites are needed Furthermore the area of financial assessments was explored in a systematic literature review to identify insights for developing such assessments tailored for individual original equipment manufacturers in initiating remanufacturing For this six perspectives for framing financial assessments are proposed These cover the system boundaries for the assessments as well as the individual needs and visions of original equipment manufacturers Additionally a framework was developed to select financial assessment models for remanufacturing initiations based on ease of use and capability to handle complex datasets Conclusively it is proposed to apply the prerequisites for initiating remanufacturing together with a financial assessment in an iterative manner to investigate the profitability for original equipment manufacturers to initiate remanufacturing The essential prerequisites influence the first iteration of the financial assessment which then contributes to refinements of how the essential prerequisites should be aligned in an economically preferable way Once satisfactory another iterative process could be initiated between the supporting prerequisites and the financial assessment By using the proposed approach the prospects of profitable remanufacturing could be thoroughly investigated before attempting to initiate a process in practice thus reducing the number of resources spent in vain Additionally the iterative process was integrated into a 5 step Approach For Initiating Remanufacturing 5AFIR

transdisciplinär forskningsmetodik där initieringen av långsamt tillverkning studeras vid två originaltillverkare. Den utförda forskningen utvecklade kunskap om hur tillverkning kan integreras i en originaltillverkares befintliga verksamhet. Parallellt med detta utvecklades ekonomiska utvärderingsmetoder för att tillhandahålla ett mått på hur väl fallfretagen skulle kunna utföra tillverkning. För fallstudien utvecklades det sju tillverkningsscenarion som sträcker sig från centraliserad tillverkning som utförs av originaltillverkaren till decentraliserad som utförs vid flertalet platser inom ett territoriums ljusnätverk. Vilket scenario som var mest fördelaktigt berodde exempelvis på riskmedvetenhet, samarbete mellan aktörer och tillverkningsvolym. Men givet ideala förhållanden visades det att centraliserad tillverkning vore potentiellt mest fördelaktigt för fallfretaget eftersom förre mellanhanden och stordriftsfördelarna mottar en lägre kostnader. För det andra fallfretagets initieringen av tillverkning vid tillämpning av den transdisciplinära forskningsmetodiken var det ett affärsmodellsfokus vilket innebär att tillverkningssystemet var en konsekvens av ett beslut för en viss affärsmodell. I denna del av forskningen utvecklades en scenariobaserad analysmetod för att först under vilka förhållanden som affärsmodellen tillsammans med tillverkning vore mer lukrativ för företaget, originaltillverkaren och mindre kostsamt för användaren, kunden. För detta utvecklades en systematisk ansats för ekonomiska utvärderingar bestående av tre steg: 1. tillhandahålla en kostnadsverblick för varje affärsmodell, 2. skapa scenarion genom att modifiera kostnadsdrivarna och 3. kombinera scenarion för att uppnå synergieffekter. Med utgångspunkt i fallstudien utvecklades även faktorer för att forma krav för hur originaltillverkare kan initiera tillverkning. Dessa faktorer delas upp i grundläggande och stödjande kravställningar och de bygger tillsammans upp ett ramverk för samt tillverkningsraketerna. De grundläggande kravställningarna lyfter fram elementära krav vid utlandet av tillverkning och om en av de fyra skulle saknas kan tillverkning inte utföras på ett framgångsrikt sätt. De stödjande kravställningarna rör avseende på att förbättra tillverkningseffektiviteten genom exempelvis bekymmersfritt utbyte av processer, organisationsförändringar eller informationsutbytet. Därigenom för att nå den fulla potentialen av tillverkning behövs både de grundläggande och de stödjande kravställningarna. Dessutom utforskades om det för ekonomiska utvärderingsmetoder i en systematisk litteraturgenomgång för att identifiera insikter för att utveckla sådana metoder skräddarsydda för individuella originaltillverkare som initierar tillverkning. För närmare detaljer ses sex perspektiv för att forma ekonomiska utvärderingsmetoder. Dessa täcker såväl systemgränserna för utvärderingarna som individuella behov och visioner hos originaltillverkare. För att vidare stödja företagen utvecklades ett ramverk för att välja ekonomiska utvärderingsmetoder för initieringar av tillverkning baserat på användarvänlighet och förmåga att hantera komplexa data. Slutligen förslås det att tillämpa de framtagna kravställningarna tillsammans med ekonomisk utvärdering genom att iterativt undersöka möjligheterna för hur tillverkning kan initieras för originaltillverkare. De grundläggande kravställningarna influerar upplägget för den första iterationen av den ekonomiska utvärderingen vilken i sin tur nyttjas för att förfinas hur de grundläggande kravställningarna kan ligga samman på ett ekonomiskt fördelaktigt sätt. När en godtagbar nivå uppnåtts kan ytterligare en iterativ

process utföras mellan de st djande kravst lningarna och den ekonomiska v rderingen Genom att till mpa det f reslagna tillv gag ngss ttet kan m jligheterna f r tertillverkning unders kas p en detaljerad niv innan initieringsf rs k i praktiken och s ldes kan m ngden sl sade resurser minskas Ut ver detta integrerades det iterativa tillv gag ngss ttet med en 5 stegsansats f r initiering av tertillverkning 5AFIR *Freedom and Social Inclusion in a Connected World* Yingqin Zheng,Pamela Abbott,Jose Antonio Robles-Flores,2022-11-19 This book constitutes the refereed proceedings of the 17th IFIP WG 9 4 International Conference on Social Implications of Computers in Developing Countries ICT4D 2022 which was supposed to be held in Lima Peru in May 2021 but was held virtually instead due to the COVID 19 pandemic The 40 revised full papers presented were carefully reviewed and selected from 58 submissions The papers present a wide range of perspectives and disciplines including but not limited to public administration entrepreneurship business administration information technology for development information management systems organization studies philosophy and management They are organized in the following topical sections digital platforms and gig economy education and health inclusion and participation and business innovation and data privacy *Manual of Neurologic Emergencies* Andy S.
