Won-Kee Hong,2024-10-16 This book introduces an auto design based optimization for building frames using an artificial
neural network ANN based Lagrange method and novel genetic algorithm GA The work of great mathematician Joseph Louis
Lagrange and ANNs are merged to identify parameters that optimize structural frames of reinforced concrete prestressed
concrete and steel frames subject to one or more design constraints New features for enhancing conventional GA are also
demonstrated to optimize structural frames New features for optimizing multiple design targets of the building frames are
highlighted while design requirements imposed by codes are automatically satisfied Chapters provide readers with an
understanding of how both ANN based and novel GA based structural optimization can be implemented in holistically
optimizing designated design targets for building structural frames guiding readers toward more rational designs that is
consistent with American Institute of Steel Construction AISC and American Concrete Institute ACI standards ANN based
