Beyond Reductionism A Passion For Interdisciplinarity Routledge Studies In Ecological Economics:

Beyond Reductionism Katharine Farrell, Tommaso Luzzati, Sybille van den Hove, 2013-05-07 This is a book about the work of scientists in the era of the Anthropocene where human beings appear to have become a driving force in the evolution of the planet. It is a diverse collection of empirical, methodological, and theoretical chapters concerned with the practice of interdisciplinary social ecological systems research. The aim of the contributors is to give the reader an appreciation for the range and complexity of the challenges faced by researchers, research institutions, and wider communities trying to make sense of the causes and consequences of this new era of global environmental change. The tragedy of the Anthropocene of the large scale anthropogenic habitat destruction and planet wide impacts of anthropogenic climate change is not that science has failed humanity but rather that it has served humanity all too well, making possible in just a few hundred years volumes and scales of human activity far exceeding anything ever seen before. Coming to terms with that success was the aim of the 1969 Alpbach Symposium from which this book draws its name, where contributors including Friedrich Hayek and Ludwig von Bertalanffy asked themselves what theory, practices, and standards are required to move beyond reductionism. Like those from 1969, the answers presented in this collection are hugely diverse, ranging from PhD students concerned with research methods and institutional obstacles to mid-career scholars presenting their innovative beyond reductionism research methods to emeritus professors looking back over what has been achieved in the past 30 years and suggesting where things might go from here. All the contributors begin from the premise that the challenges of the Anthropocene can only be successfully met if interdisciplinary research effectively brings together social and natural sciences, the humanities, stakeholders, and decision makers. They conclude in unison that both the institutional and the methodological foundations needed to do this work are still sorely lacking. While this may seem a dismal position, the book is full of success stories such as the integrative approach of MuSIASEM (Multi Scale Integrative Assessment of Social Ecological Metabolism) developed by Mario Giampietro's group in Barcelona, Spain; the alternative perspectives of what Ariel Salleh calls the meta-industrial discourse in Ecofeminism; or the innovative trans-departmental status of the Stockholm Resilience Centre in Sweden. Putting both the theoretical and methodological challenges of moving beyond reductionism on the table for discussion, this text aims to help a growing community of passionate thinkers and actors better understand themselves and their work.

Transdisciplinary Perspectives on Transitions to Sustainability Edmond Byrne, Gerard Mullally, Colin Sage, 2016-06-17 Demonstrating how a university can in a very practical and pragmatic way be re envisioned through a transdisciplinary informed frame this book shows how through an open and collegiate spirit of inquiry the most pressing and multifaceted issue of contemporary societal unsustainability can be addressed and understood in a way that

transcends narrow disciplinary work It also provides a practical exemplar of how far more meaningful deliberation understandings and options for action in relation to contemporary sustainability related crises can emerge than could otherwise be achieved Indeed it helps demonstrate how only through a transdisciplinary ethos and approach can real progress be achieved The fact that this can be done in parallel to or perhaps underneath the day to day business of the university serves to highlight how even micro seed initiatives can further the process of breaking down silos and reuniting C P Snow s two cultures after some four centuries of the relentless project of modernity While much has been written and talked about with respect to both sustainability and transdisciplinarity this book offers a pragmatic example which hopefully will signpost the ways others can will and indeed must follow in our common quest for real progress **Smart**

Economy Malte Faber,Reiner Manstetten,2009-09-10 In today s world despite the dramatic anthropogenic environmental changes a proper understanding of the relationship between humanity and nature requires a certain detachment The pressing problems in their whole extent will only be fully understood and solved with comprehensive and patient analysis Accordingly this book develops new perspectives on fundamental questions of biology ecology and the economy integrated within a framework of a terminology specially devised by the authors By illuminating the epistemological backgrounds of ecological economic research the authors lay foundations for interdisciplinary environmental research and offer guidelines for practical action In close contact to the findings of present day biology and economics they demonstrate the fruitfulness as well as the shortcomings of modern science for the understanding of the proper place of humankind in nature Many of the book s central concepts are rooted in a tradition whose origins go back to European philosophy and literature of the 17th Century Frequently current problems in the fields of economics ecology politics philosophy and biology are discussed in a kind of dialogue with thinkers and poets like Bacon Quesnay Kant Goethe and Novalis This approach of the book known in Continental European Philosophy as hermeneutics offers a map rather than marking out a specific course On the other hand the book offers traits of the Anglo Saxon tradition of thought a precise analytical approach to theory and a pragmatic approach to action Both approaches are used by the authors complementarily Thus the authors lay the foundations for an ecological economical and political practice which is able to tackle concrete environmental problems on an encompassing and long term basis This translated volume will be of great use and interest to students of ecology economics and in particular environmental education sustainable development and environmental ethics

A History of Ecological

Economic Thought Marco P. Vianna Franco,Antoine Missemer,2022-08-01 Contributing to a better understanding of contemporary issues of environmental sustainability from a historical perspective this book provides a cohesive and cogent account of the history of ecological economic thought The work unearths a diverse set of ideas within a Western and Slavic context from the Renaissance and the Enlightenment to the late 1940s to reveal insights firmly grounded in historiographical research and of import for addressing current sustainability challenges not least by means of improving our grasp on how humans and nature can generously coexist in the long term The history of ecological economic thought offered in this volume is rich and diverse encompassing views that are bound by the observance of the tenets of the natural sciences but which differ significantly in terms of the role of energy and materials to cultural development and the normative aspects involving resource distribution social ideals and policy making Combining the approaches of independent scholarly figures and scientific communities from different historical periods and nationalities the book brings elements that are still missing in the scarce literature on the history of ecological economic thought and highlights the underlying threads which unite such initiatives The book brings a fresh look into the historical development of ecological economic ideas and will therefore be of great interest to scholars and students of ecological economics environmental economics sustainability science

interdisciplinary studies and history of economic thought **The Great Transition** Mauro Bonaiuti, 2014 Recent events including the financial crisis and the gradual lessening of the planet's natural resources have raised the fundamental question as to whether the capitalist market system can survive its own contradictions or whether we are witnessing the outset of a profound change in civilization By deploying the tools of the science of complexity alongside those of historical research Mauro Bonaiuti tackles this basic question posed against a backdrop of declining marginal returns where growth in the complexity of industrial military and bureaucratic institutional apparatuses is thought to have led to progressive increases in economic social and environmental costs In this framework the economic crisis we are traversing grave as it could be interpreted not as a simple cyclical crisis from which it is possible to escape by the traditional policies of supporting growth but as the outcome of a passage of civilization inscribed in the long term evolutionary dynamics of capitalism After the crisis that started in 2008 with millions of people unemployed with the failure of the economy to pick up and with the ever growing sense of precariousness and insecurity we are beginning to suspect that we are facing something more than a cyclical crisis Routledge Handbook of Ecological Economics Clive L. their natural environment but more fundamentally a way of organizing global human society From the very start it has been a global phenomenon which has intertwined political economic and environmental histories in complex and inequitable ways This book unravels these complex connections and rejects the widespread notion that technology will make the world sustainable Instead it suggests a radical reform of money which would be as useful for achieving sustainability as for avoiding financial breakdown It brings together various perspectives from environmental and economic anthropology ecological economics political ecology world system analysis fetishism theory semiotics environmental and economic history and development theory Its main contribution is a new understanding of technological development and concerns about global sustainability as questions of power and uneven distribution ultimately deriving from the inherent logic of general purpose money It should be of interest to students and professionals with a background or current engagement in anthropology sustainability studies environmental history economic history or development studies

Beyond Uneconomic Growth

Joshua C. Farley, Deepak Malghan, 2016 Daly's contributions to the still emergent field of ecological economics are constant references for our peers throughout the developing world as well as in the North His courageous tilting at the windmills of mainstream economic nonsense inspire us to continue questioning in whose interests do we continue on a perpetual search

for unlimited material satisfaction Daly's conception is not only of a world restricted by biophysical limits but also one in which poverty and deprivation are commonplace and where Sisyphean efforts to maintain accelerated economic growth only exacerbate inequitable distribution. His vision of sustainable economic welfare shed light on other aspects of our existence which make it worth living. Thanks to Farley Rees, El Serafy, Goodland and other fellow travelers we are bestowed with an excellent collection synthesizing Daly's contributions to our work which will inspire our youth and their children long after we too depart. Peter H. May, President Brazilian Society for Ecological Economics (ECOECO) Contributed by several eminent thinkers the chapters in this book herald the paradigm shift that is needed to save the scientific framework of economics. In spite of the conceptual inconsistencies GDP continues to be accepted by the nation states as the singular parameter to comprehensively describe the health of their economy. What gets easily hidden behind Market Failures is actually the success of cost shifting on the heads of the ignorant and marginalized people as price for economic growth. The chapters eloquently establish the need for moving beyond the religious faith on a paradigm that is facing fundamental conceptual challenges but has not addressed them with due seriousness. What is a greater contribution of this collection is the identification of the gaps in knowledge of economics that need to be filled up to arrive at some basic articulations of the new paradigm that can throw some light on what is ecologically and socially Sustainable Development. Jayanta Bandyopadhyay, Past President The Indian Society for Ecological Economics. The title *Beyond Uneconomic Growth* captures both the core of Herman Daly's key message and the linguistic mastery that makes his texts so enjoyable to read. The book forms a great tribute to the work of Herman Daly by gathering a distinguished set of contributors covering a wide variety of the topics that Daly has dealt with and pointing in new directions. Inge R. Pke, Aalborg University, Denmark. This engaging book brings together leading ecological economists to collectively present a definitive case for looking beyond economic growth as the sole panacea for the world's ecological predicament. Grounded in physics, ecology and the science of human behavior, contributors show how economic growth itself has become uneconomic and adds to a ravaging of both social and ecological cohesion. Guided by a clear moral vision that prioritizes sustainability and justice over profit, the authors provide a blueprint for an economy that replaces quantitative growth with qualitative improvement to enhance human welfare while restoring degraded ecosystems. They present solutions for many of today's challenges ranging from global climate change and biodiversity loss to natural resource depletion. This interdisciplinary work not only relates ecological economics theory to the most urgent predicaments of the contemporary world but also pays tribute to the work of Herman Daly, a leading pioneer of modern ecological economics. Researchers and faculty studying and teaching ecological economics and environmental studies will find value in this unprecedented book. It will also be of interest to practitioners working to solve a variety of global environmental issues.

Anarchism and Ecological Economics Ove Daniel Jakobsen, 2018-12-07 *Anarchism and Ecological Economics* A

Transformative Approach to a Sustainable Future explores the idea that anarchism aimed at creating a society where there is

as much freedom in solidarity as possible may provide an ideal political basis for the goals of ecological economics. It seems clear that it is going to be impossible to solve the problems connected to environmental degradation, climate change, economic crashes, and increasing inequality within the existing paradigm. The anarchist aims of reducing the disparities of rank and income in society and obtaining a high standard of living within environmentally sound ecosystems chime well with the ecological economists' goal of living within our environmental limits for the betterment of the planet and society. The book refers to the UN's sustainability development goals and the goals expressed in the Earth Charter, viewing them through an anarchist's lens. It argues that in order to establish ecological economics as a radical new economy right for the 21st century, neoliberal economics needs to be replaced. By connecting ecological economics to a solid philosophical tradition such as anarchism, it will be easier for ecological economics to become a far more potent alternative to green economic thinking, which is based on and supports the dominant political regime. Innovative and challenging, this book will appeal to students and scholars interested in economics and the politics surrounding it.

The Question of Limits Christian

Marouby, 2018-11-09 We have forgotten how to think about limits. Most philosophical approaches to the environment have focused primarily on the value of the natural world, the status of anthropocentrism, and the Anthropocene, and the largely ethical questions of our impact on the world. While fully acknowledging these concerns, this book emphasizes the centrality of the confrontation between the imperative of growth that has been present since the Enlightenment and our belated rediscovery of limits. The expression "Limits to Growth," the title of a famous book from 1972 by Donella H. Meadows et al., may have passed into a common discourse, yet the notion of limits itself remains insufficiently theorized or even reflected upon in the current movement of environmental advocacy. Sometimes it even seems as if there is an effort to avoid it. This book argues that on the contrary, we can only resolve the present global challenges by confronting the question of limits and making it central to our reflection. This entails discussing the long history of thinking about limits, in which Malthus is the most infamous figure, but which also includes such major participants as John Stuart Mill and Karl Marx. Ultimately, *The Question of Limits* contends that the value of embracing limits extends beyond the environment and offers the potential to become a transformative social good. *The Question of Limits* will be of great interest to students and scholars working at the intersection of environmental studies, economics, intellectual history, and philosophy.

Philosophy of Interdisciplinarity

Jan Cornelius Schmidt, 2021-12-27 Interdisciplinarity is a hallmark of contemporary knowledge production. This book introduces a Philosophy of Interdisciplinarity at the intersection of science, society, and sustainability. In light of the ambivalence of the technosciences and the challenge of sustainable development in the Anthropocene, this engaged philosophy provides a novel critical perspective on interdisciplinarity in science, policy, and research practice. It draws upon the original spirit of interdisciplinarity as an environmentalist concept and advocates an essential change in human nature relations. The author utilizes the rich tradition of philosophy for case study analysis and develops a framework to disentangle

the various forms of inter and transdisciplinarity Philosophy of Interdisciplinarity offers a foundation for a critical reflexive program of interdisciplinarity conducive to a sustainable future for our knowledge society and contributes to fields such as sustainable sciences social ecology environmental ethics technology assessment complex systems philosophy of nature and philosophy of science It injects a fresh way of thinking on interdisciplinarity and supports researchers as well as science policy makers university managers and academic administrators in critical reflexive knowledge production for sustainable development
