The first and foremost goal of this lecture series was to show the beauty, depth, and usefulness of the key ideas in computer science. While working on the lecture notes, we came to understand that one can recognize the true spirit of a scientific discipline only by viewing its contributions in the framework of science as a whole. We present computer science here as a fundamental science that, interacting with other scientific disciplines, changed and changes our view on the world that contributes to our understanding of the fundamental concepts of science and that sheds new light on and brings new meaning to several of these concepts. We show that computer science is a discipline that discovers spectacular, unexpected facts that finds ways out in seemingly unsolvable situations and that can do true wonders. The message of this book is that computer science is a fascinating research area with a big impact on the real world, full of spectacular ideas and great challenges. It is an integral part of science and engineering with an above-average dynamic over the last 30 years and a high degree of interdisciplinarity. The goal of this book is not typical for popular science writing, which often restricts itself to outlining the importance of a research area. Whenever possible, we strive to bring full understanding of the concepts and results presented.

The Asiatic Journal and Monthly Register for British and Foreign India, China, and Australia, 1835 **Privacy Is Hard and Seven Other Myths** Jaap-Henk Hoepman, 2023-10-03

An expert on computer privacy and security shows how we can build privacy into the design of systems from the start. We are tethered to our devices all day every day, leaving data trails of our searches, posts, clicks, and communications. Meanwhile, governments and businesses collect our data and use it to monitor us without our knowledge. So we have resigned ourselves to the belief that privacy is hard, choosing to believe that websites do not share our information for example and declaring that we have nothing to hide anyway. In this informative and illuminating book, a computer privacy and security expert argues that privacy is not that hard if we build it into the design of systems from the start. Along the way, Jaap-Henk Hoepman debunks eight persistent myths surrounding computer privacy. The website that claims it doesn't collect personal data, for example. Hoepman explains that most data is personal, capturing location preferences and other information. You don't have anything to hide. There's nothing wrong with wanting to keep personal information even if it's not incriminating or embarrassing. Private. Hoepman shows that just as technology can be used to invade our privacy, it can be used to protect it when we apply privacy by design. Hoepman suggests technical fixes, discussing pseudonyms, leaky design, encryption, metadata, and the benefits of keeping your data local on your own device only, and outlines privacy design strategies that system designers can apply now.
