Sensors Application in Agriculture Dimitrios S. Paraforos, Spyros Fountas, Francesco Marinello, 2020-11-06 Novel technologies are playing an important role in the development of crop and livestock farming and have the potential to be the key drivers of sustainable intensification of agricultural systems In particular new sensors are now available with reduced dimensions reduced costs and increased performances which can be implemented and integrated in production systems providing more data and eventually an increase in information It is of great importance to support the digital transformation precision agriculture and smart farming and to eventually allow a revolution in the way food is produced In order to exploit these results authoritative studies from the research world are still needed to support the development and implementation of new solutions and best practices This Special Issue is aimed at bringing together recent developments related to novel sensors and their proved or potential applications in agriculture

Beyond Digital Representation

Andrea Giordano, Michele Russo, Roberta Spallone, 2023-09-01 This book collects contributions which showcase the impact of new augmented reality AR and artificial intelligence AI technologies considered jointly in the fields of cultural heritage and innovative design AR is an alternative path of analysis and communication if applied to several fields of research in particular if related to space and artifacts in it This happens because the neural network development strengthens the relationship between augmented reality and artificial intelligence creating processes close to human thought in shorter times In the last years the AR AI expansion and the future scenarios have raised a deep trans disciplinary speculation The disciplines of representation drawing surveying visual communication as a convergence place of multidisciplinary theoretical and applicative studies related to architecture city environment tangible and intangible cultural heritage are called to contribute to the international debate The book chapters deal with augmented reality and artificial intelligence analyzing their connections as research tools for knowing the environment In particular the topics focus on the intersection between real and virtual world and on the heuristic role of drawing in the enhancement and management of cultural heritage in planning and monitoring the architecture the environment or the infrastructures Scientists involved in AR and AI research applied separately or together in the field of cultural heritage architectural design urban planning and infrastructures analysis as well as members of public and private organizations make up interdisciplinary groups that fuel the discussion focusing on the priorities and aims of the research related to the disciplines of representation

Applications of Small Unmanned Aircraft Systems

J.B. Sharma, 2019-10-18 Advances in high spatial resolution mapping capabilities and the new rules established by the Federal Aviation Administration in the United States for the operation of Small Unmanned Aircraft Systems sUAS have provided new opportunities to acquire aerial data at a lower cost and more safely versus other methods A similar opening of the skies for sUAS applications is being allowed in countries across the world Also sUAS can access hazardous or inaccessible areas during disaster events and provide rapid response when needed Applications of Small Unmanned Aircraft systems Best Practices and Case Studies is the first book that brings together the best practices of sUAS applied to a broad range of issues in high spatial resolution mapping projects Very few sUAS pilots have the knowledge of how the collected imagery is processed into value added mapping products that have commercial and or academic import Since the field of sUAS applications is just a few years old this book covers the need for a compendium of case studies to guide the planning data collection and most importantly data processing and map error issues with the range of sensors available to the user community Written by experienced academics and professionals this book serves as a guide on how to formulate sUAS based projects from choice of a sUAS flight planning for a particular application sensors and data acquisition data processing software mapping software and use of the high spatial resolution maps produced for particular types of geospatial modeling Features Focus on sUAS based data acquisition and processing into map products Broad range of case studies by highly experienced academics Practical guidance on sUAS hardware sensors and software utilized Compilation of workflow insights from expert professors and professionals Relevant to academia government and industry Positional and thematic map accuracy UAS curriculum development and workflow replicability issues This book would be an excellent text for upper level undergraduate to graduate level sUAS mapping application courses It is also invaluable as a reference for educators designing sUAS based curriculum as well as for potential sUAS users to assess the scope of mapping projects that can be done with this technology
