anticipation studies of science and technology **Prophets of the Posthuman** Christina Bieber Lake, 2013-09-30 *Prophets of the Posthuman* provides a fresh and original reading of fictional narratives that raise the question of what it means to be human in the face of rapidly developing bioenhancement technologies Christina Bieber Lake argues that works by Nathaniel Hawthorne Walker Percy Flannery O'Connor Toni Morrison George Saunders Marilynne Robinson Raymond Carver James Tiptree Jr and Margaret Atwood must be reevaluated in light of their contributions to larger ethical questions Drawing on a wide range of sources in philosophical and theological ethics Lake claims that these writers share a commitment to maintaining a category of personhood more meaningful than that allowed by utilitarian ethics *Prophets of the Posthuman* insists that because technology can never ask whether we should do something that we have the power to do literature must step into that role Each of the chapters of this interdisciplinary study sets up a typical ethical scenario regarding human enhancement technology and then illustrates how a work of fiction uniquely speaks to that scenario exposing a realm of human motivations that might otherwise be overlooked or simplified Through the vision of the writers she discusses Lake uncovers a deep critique of the ascendancy of personal autonomy as America's most cherished value This ascendancy coupled with technology's glamorous promises of happiness helps to shape a utilitarian view of persons that makes responsible ethical behavior toward one another almost impossible *Prophets of the Posthuman* charts the essential role that literature must play in the continuing conversation of what it means to be human in a posthuman world **Bioethics and Medicine** C. Ben Mitchell, 2025-09-01 In *Bioethics and Medicine A Short Companion* C Ben Mitchell challenges the prevailing view of bioethics as solely a matter of expert problem solving Instead he argues that the ethics of medicine is deeply rooted in an ancient profession with a rich moral heritage **Imagined Futures in Science, Technology and Society** Gert Verschraegen, Frédéric Vandermoere, Luc Braeckmans, Barbara Segaert, 2017-04-07 *Imagining forecasting and predicting the future* is an inextricable and increasingly important part of the present States organizations and individuals almost continuously have to make decisions about future actions financial investments or technological innovation without much knowledge of what will exactly happen in the future Science and technology play a crucial role in this collective attempt to make sense of the future Technological developments such as nanotechnology robotics or solar energy largely shape how we dream and think about the future while economic forecasts gene tests or climate change projections help us to make images of what may possibly occur in the future This book provides one of the first interdisciplinary assessments of how scientific and technological imaginations matter in the formation of human ecological and societal futures Rooted in different disciplines such as sociology philosophy and science and technology studies it explores how various actors such as scientists companies or states imagine the future to be and act upon that imagination Bringing together case studies from different regions around the globe including the electrification of German car infrastructure or genetically modified crops in India *Imagined Futures in Science Technology and Society* shows how science and technology create novel forms of

God's Light Bulb Muzella Hayes Ph.D, 2019-10-22 Earthly man does not always understand the revelations of the Word it is therefore sometimes necessary to use metaphors or parables as Jesus did when teaching the Jews about the kingdom of God In the same vein this dissertation uses the metaphor of a light bulb that can emanate light when plugged into an electrical source to the light that shines from God Going further with this metaphor the light bulb of God takes its energy from the Lord himself as it shines in the lives of everyone who believes in God Light is used to show the way as roads airport runways and stations are lit to facilitate easier traveling to humans Light as humans know it was only possible after electricity was discovered Caldwell stated that in New York by the late 1870 s electric light was no longer a novelty though the city didn't get its first consumer power grid until eight teen eighty two The city put electrical lights to good use as the New York Train System lit up the tracks twenty four hours a day this provided an indication of the way the train would go This was considered light that would guide the way for so many people travelling the city This train line pointing to the way people should go can be seen as a metaphor for The Way in a biblical sense There are people who do not know or believe that the first light was God's light

The Transhuman Antihero Michael Grantham, 2015-09-25 Advances in science and technology no longer change how we live they determine it In the not too distant future techno scientific developments may make individuals stronger smarter healthier and more productive but to what end Addressing this question speculative fiction has created an abundance of transhuman characters protagonists with extraordinary strength

intelligence or abilities. Often they are antiheroes, openly rejecting or rejected by society and acting on immoral or extreme principles that challenge readers to approve, condemn, excuse, or explain. This study explores the antihero of speculative fiction as a paradoxical blend of human and transhuman. These protagonists illustrate the dynamics of individual, technological, scientific, and societal norms and blur distinctions between human and machine, biology and technology, right and wrong. Fictional works covered include Mary Shelley's *Frankenstein* (1818), Olaf Stapledon's *Odd John* (1935), Alfred Bester's *The Stars My Destination* (1956), William Gibson's *Neuromancer* (1986), Alan Moore and Dave Gibbons' *Watchmen* (1986-1987), Richard Morgan's trilogy *Altered Carbon* (2001), *Broken Angels* (2003), and *Woken Furies* (2005), and *Black Man* (2007).
