*Immeasurable Outcomes* Gayle Greene, 2023-01-17 What is the purpose of education The answer might be found in a Shakespeare class at a small liberal arts college In this engaging account of teaching a Shakespeare class at a small liberal arts college Gayle Greene illustrates what is so vital and urgent about the humanities Follow along with Greene as she introduces us to her students and showcases their strengths needs and vulnerabilities so we can experience the magic of her classroom In *Immeasurable Outcomes* Greene's class builds a complex human ecosystem that pushes students to think more deeply and discover their own interests and potential all while recognizing the inherent dignity in other people's views and values Grounding her analyses in half a century of teaching Greene pushes back against the demand for measurable student learning outcomes and the standardization imposed on K 12 schools in the name of reform Instead she draws her conclusions about education directly from the students themselves Alumni testimonials describe the transformative power of a liberal arts education recounting how their experience of community and engagement has provided them the tools to navigate the uncertainties of a rapidly changing world while also inspiring the social awareness our democracy depends on *Immeasurable Outcomes* rejects claims that the liberal arts are impractical exposing the political agendas of technocrats and ideologues who would transform higher education into vocational training and programs focused only on profitability Greene reminds us that the liberal arts have been the basis for the most successful educational system in the world and provides a powerful demonstration that education at a human scale that is relationship rich and humanities based should be the model for education in the future

Arithmetic Counts! Paul Shoecraft,2025-01-24 Dr Shoecraft may be the only mathematician since the New Math in the 1960s to seriously analyze the lowly subject of arithmetic and how to teach it His breakthrough came when he experimented with teaching what needs to be understood instead of known memorized like teaching why addition problems until the algorithm they are using supposedly becomes cemented in their brains By teaching the essence of arithmetic in sensible ways and appealing to children s love of games songs and movement he s proven that virtually ALL children can learn arithmetic the foundation of algebra higher mathematics science technology and more even music When children understand arithmetic they own it It s no lonver just their teacher s math It s their math America s children are

being held back in math because of how arithmetic is drug out in elementary school Virtually every textbook based elementary school math program in use today is mind numbing in its repetitiveness from grade to grade The reason for the redundancy is to slow down the teaching of arithmetic so it can be memorized Research shows that the human brain is not designed to remember things learned by rote when no longer practiced That s acknowledged in the use it or lose it aphorism that states the obvious that we remember what we use and forget what we don t You know that to be true if you ve ever forgotten things you once knew as well as your own name things like an old address or a license plate number Every child can understand base ten numeration when taught hands on with arithmetic blocks Thereby every child can understand base ten arithmetic And every child can learn how to count out the number facts like 5 7 12 17 8 9 6 X 7 42 and 56 7 8 and if they forget one never have to guess and risk ridicule and bad grades if they guess wrong What matters in teaching arithmetic is not how much a child can remember but how much they can figure out if when they forget
