based approach to teaching and practical guidance on how to progressively implement it to strengthen the impact of their teaching. It demonstrates how they can integrate learning centered teaching into their classroom practice without sacrificing content and rigor and how to positively engage students in the process by demonstrating its impact on their mastery and recall of key concepts and knowledge. An added outcome given that learning centered teaching is correlated with improved student learning is the resulting assessment data that it provides faculty with the measures to meet the increased demands by accreditors, legislators and society for evidence of improved teaching and learning outcomes.

Phyllis Blumberg demonstrates how to use rubrics to not only satisfy outside requirements and accreditation self studies but more importantly for faculty to use for the purposes of self improvement or their teaching portfolios. She provides examples of how the rubrics can be used to ascertain whether college wide strategic plans for teaching excellence are being met for program review and to determine the effectiveness of faculty development efforts. The book includes the following features:

- Boxes with easy to implement and adaptable examples covering applications across disciplines and course types
- Worksheets that foster easy implementation of concepts
- Rubrics for self assessment and peer assessment of learning centered teaching
- Detailed directions on how to use the rubrics as a teaching assessment tool for individuals, courses and programs
- List of examples of use classified by discipline and type of course

Phyllis Blumberg offers Making Learning Centered Teaching Course Design Institutes and workshops on this and other teaching and assessment topics. Half day to multiple day modules. For more information or questions contact blumbergphyllis@gmail.com or IntegrateEd.com

Biophysical Chemistry Peter R. Bergethon, Elizabeth R. Simons, 2012-12-06. Biophysical Chemistry: Molecules to Membranes is a one semester textbook for graduate and senior undergraduate students. Developed over several years of teaching, the approach differs from that of other texts by emphasizing thermodynamics of aqueous solutions, by rigorously treating electrostatics and irreversible phenomena, and by applying these principles to topics of biochemistry and biophysics. The main sections are:

1. Basic principles of equilibrium thermodynamics
2. Structure and behavior of solutions of ions and molecules. The discussions range from properties of bulk water to the solvent structure of solutions of small molecules and macromolecules.
3. Physical principles are extended for the non homogeneous and non equilibrium nature of biological processes. Areas included are lipid water systems, transport phenomena, membranes and bio electrochemistry.

This new textbook will provide an essential foundation for research in cellular physiology, biochemistry, membrane biology, as well as the derived areas: bioengineering, pharmacology, nephrology and many others.

Photosynthesis : G. Garab, 1998-12-15. Photosynthesis is a process on which virtually all life on Earth depends. To answer the basic questions at all levels of complexity from molecules to ecosystems and to establish correlations and interactions between these levels, photosynthesis research perhaps more than any other discipline in biology requires a multidisciplinary approach. Congresses probably provide the only forums where progress throughout the whole field can be

overviewed The Congress proceedings give faithful pictures of recent advances in photosynthesis research and outline trends and perspectives in all areas ranging from molecular events to aspects of photosynthesis on the global scale The Proceedings Book a set of 4 or 5 volumes is traditionally highly recognized and intensely quoted in the literature and is found on the shelves of most senior scientists in the field and in all major libraries
