Neuroinflammation, Neurodegeneration and Metabolic Disease: From Molecular Mechanisms to Therapeutic Innovation Fawaz Alzaid, Mohammed Al-Onaizi, Ayman ElAli, 2024-09-05 Neuroinflammation manifests as changes to cognition or behavior or as altered function in peripheral tissues Patients with metabolic diseases e g diabetes obesity are more likely to suffer with neuroinflammation since the disrupted metabolism and chronic low grade inflammation that accompany metabolic diseases extends to the nervous system Neuroinflammation will then lead to functional impairment and progressive loss of neuronal structure with neurodegeneration being the end result Factors like chronic hyperglycemia dyslipidemia and insulin resistance are candidate drivers of neuroinflammation and neurodegeneration The effects on the nervous system also contribute to worsening insulin resistance and a further loss of metabolic function and homeostasis in innervated peripheral tissues e g liver adipose tissue Persistent metabolic stress predisposes patients to peripheral neuropathies cognitive dysfunction and development of neurodegenerative diseases e g Alzheimer s disease Multiple associations link metabolic disease to neuropathology targeting neuroinflammation to preserve neuronal integrity holds promise for managing metabolic diseases and associated neurological complications Research on Neuroinflammation Neurodegeneration and Metabolic Disease From Molecular Mechanisms to Therapeutic Innovation is necessary to address several critical gaps in our understanding and treatment of metabolic diseases and of neuropathology Firstly while the role of systemic inflammation in metabolic diseases has been extensively studied the specific impact of nervous system inflammation neuroinflammation and resulting neurodegeneration on these conditions is still an emerging field Investigating the mechanisms by which neuroinflammation and neurodegeneration contribute to metabolic diseases can provide valuable insights into the pathogenesis and progression of these conditions

Range, Expression and Evolution William B. Walker, Emmanuelle Jacquin-Joly, Sharon R. Hill, 2016-06-11 Olfaction and taste are of critical importance to insects and other animals since vital behaviours including mate food and host seeking as well as predator and toxin avoidance are guided by chemosensory cues Mate and habitat choice are to a large extent determined by chemical signals and chemoreceptors contribute accordingly to pre mating isolation barriers and speciation In addition to fundamental physiological ecological and evolutionary consideration the knowledge of insect taste and especially olfaction is also of great importance to human economies since it facilitates a more informed approach to the management of insect pests of agricultural crops and forests and insect vectors of disease Chemoreceptors which bind to external chemical signals and then transform and send the sensory information to the brain are at the core of the peripheral olfactory and gustatory system and have thus been the focus of recent research in chemical ecology Specifically emphasis has been placed on functional characterization of olfactory receptor genes which are derived from three large gene families namely the odorant receptors gustatory receptors and ionotropic receptors Spatial expression patterns of olfactory receptors in diverse chemosensory tissues provide information on divergent functions with regards to ecologically relevant behaviours On the other hand characterization of olfactory receptor activation profiles or deorphanization provides complimentary data on the molecular range of receptivity to the fundamental unit of the olfactory sense The aim of this Research Topic is to give an update on the breadth and depth of research currently in progress related to understanding the molecular mechanisms of insect chemoreception with specific emphasis on the olfactory receptors **Municipal Index**, 1929 Conservation Issues
