Darling-Hammond, Frank Adamson, 2014-06-16 Performance assessment is a hot topic in school systems and educators continue to analyze its costs benefits and feasibility as a replacement for high stakes testing Until now researchers and policymakers have had to dig to find out what we know and what we still have to learn about performance assessment Beyond the Bubble Test How Performance Assessments Support 21st Century Learning synthesizes the latest findings in the field and not a moment too soon Statistics indicate that the United States is in danger of falling behind if it fails to adapt to our changing world The memory and recall strategies of traditional testing are no longer adequate to equip our students with the skills they need to excel in the global economy Instead teachers need to engage students in deeper learning assessing their ability to use higher order skills Skills like synthesizing information understanding evidence and critical problem solving

are not achieved when we teach to multiple choice exams Examples in Beyond the Bubble Test paint a useful picture of how schools can begin to supplement traditional tests with something that works better This book provides new perspectives on current performance assessment research plus an incisive look at what s possible at the local and state levels Linda Darling Hammond with a team of leading scholars bring together lessons learned new directions and solid recommendations into a single readily accessible compendium Beyond the Bubble Test situates the current debate on performance assessment within the context of testing in the United States This comprehensive resource also looks beyond our U S borders to Singapore Hong Kong and other places whose reform mindedness can serve as an example to us

TAYFUN TUTAK,2022-09-16 **Science Publications** Albert Piltz,1963 *Research in the Teaching of Science* ,1962 US educational achievement on international assessments Ben Dalton,2011-05-23 The debate about the performance of US students on international assessments of educational achievement routinely fails to account for one consistently stark result US achievement is bifurcated between a group of high performing Asian and white students and an exceptionally low performing group of black and Hispanic students By summarizing results across 20 major international tests conducted since 1995 this research paper shows that when US racial and ethnic groups are separately compared with other countries Asian and white students regularly perform at or near the top of international rankings while black and Hispanic students typically rank at or near the bottom Furthermore the United States has a substantially larger minority population than all other developed countries and minority status is not synonymous with internationally comparable factors such as socioeconomic level or immigrant status The fact that overall US scores are disproportionately influenced by race and ethnicity suggests that researchers and reformers must reconsider how they use and interpret the results of international achievement tests The research paper recommends providing and analyzing cross national data separately by ethnic groups to inform approaches to improving education for all students
