countries such as Belgium and Germany legal frameworks already allow for DHA integration into standard care and their prescription and uniform reimbursement via the patient's health insurance. In many other European countries and the USA such a process is still in development. DHAs are primarily used by patients themselves but also in consultation with physicians, therapists or other healthcare providers. They offer the potential for improved health outcomes and increased access to health services especially in rural areas and may lead to an overall improvement in the quality of care. The validity of studies on the effects of DHAs on patients and health care systems in general is currently limited since study methods applied do often not allow for drawing causal relationships and most studies focus only on patient outcomes but do not assess how traditional care processes need to be adapted so that DHAs can be effective. Therefore unambiguous evidence on which patient relevant outcomes can be improved specifically as a result of integrating DHA into the process of care is currently lacking.

Smart and Sustainable Engineering for Next Generation Applications Peter Fleming, Beatrys Margaretha Lacquet, Saeid Sanei, Kalyanmoy Deb, Andreas Jakobsson, 2019-05-08 This book reports on advanced theories and methods in two related engineering fields: electrical and electronic engineering and communications engineering and computing. It highlights areas of global and growing importance such as renewable energy power systems, mobile communications security and the Internet of Things (IoT). The contributions cover a number of current research issues including smart grids, photovoltaic systems, wireless power transfer, signal processing, 4G and 5G technologies, IoT applications, mobile cloud computing and many more. Based on the proceedings of the Second International Conference on Emerging Trends in Electrical, Electronic and Communications Engineering (ELECOM 2018) held in Mauritius from November 28 to 30, 2018, the book provides graduate students, researchers and professionals with a snapshot of the state of the art and a source of new ideas for future research and collaborations.

An app for fishers Mallalieu, K. I., Suraj, A., 2017-08-18 A mobile application called mFisheries was developed by the Department of Electrical and Computer Engineering at the University of the West Indies with support from development agencies such as the International Development Research Centre (IDRC) and the Technical Centre for Agricultural and Rural Cooperation (CTA). To use the app, fishers need a smartphone with global positioning capabilities. While the app will work on any suitable Android phone, it is best to have one that is waterproof and shock resistant so it can survive the knocks and splashes that are unavoidable on a pitching boat. The mFisheries team recommends phones such as the RugGear RG600 which have large screens, a long battery life and rugged construction.
