Machine Intelligence and Emerging Technologies Md. Shahriare Satu, Mohammad Ali Moni, M. Shamim Kaiser, Mohammad Shamsul Arefin, 2023-06-10 The two volume set LNICST 490 and 491 constitutes the proceedings of the First International Conference on Machine Intelligence and Emerging Technologies MIET 2022 hosted by Noakhali Science and Technology University Noakhali Bangladesh during September 23-25, 2022. The 104 papers presented in the proceedings were carefully reviewed and selected from 272 submissions. This book focuses on the theoretical/practical state of art applications and research challenges in the field of artificial intelligence and emerging technologies. It will be helpful for active researchers and practitioners in this field. These papers are organized in the following topical sections: imaging for disease detection, pattern recognition and natural language processing, bio signals and recommendation systems for wellbeing, network security and nanotechnology and emerging technologies for society and industry. *Spectrum Sharing in Wireless Networks* John D. Matyjas, Sunil Kumar, Fei Hu, 2016-11-17 *Spectrum Sharing in Wireless Networks: Fairness, Efficiency, and Security* provides a broad overview of wireless network spectrum sharing in seven distinct sections. The first section examines the big picture and basic principles explaining the concepts of spectrum sharing, hardware/software function requirements for efficient sharing and future trends of sharing strategies. The second section contains more than 10 chapters that discuss differing approaches to efficient spectrum sharing. The authors introduce a new coexistence and sharing scheme for multi-hop networks, describe the space-time sharing concept, introduce LTE-U and examine sharing in broadcast and unicast environments. They then talk about different cooperation strategies to achieve mutual benefits for primary users (PUs) and secondary users (SUs). The third section explains how to model the interactions of PUs and SUs using an efficient calculation method to determine spectrum availability. Additionally, this section explains how to use scheduling models to achieve efficient SU traffic delivery. The subject of the fourth section is MIMO-oriented design. It focuses on how directional antennas and MIMO antennas greatly enhance wireless network performance. The authors include a few chapters on capacity rate calculations as well as beamforming issues under MIMO antennas. Power control is covered in the fifth section, which also describes the interference-aware power allocation schemes among cognitive radio users and the power control schemes in cognitive radios. The sixth section provides a comprehensive look at security issues, including different types of spectrum sharing attacks and threats as well as corresponding countermeasure schemes. The seventh and final section covers issues pertaining to military applications and examines how the military task protects its data flows when sharing the spectrum with civilian applications. **The AOPA Pilot**, 1964 General Catalogue of Printed Books British Museum.
