

Convex Rearview Mirror

Your car has a convex outside right-hand mirror. (A convex mirror has a curved surface.)

- Use care when judging the size or distance of a vehicle or other object seen in this convex mirror - such objects will **LOOK** smaller and appear farther away than when seen in a flat mirror.
- Use your inside mirror (or glance rearward) to determine the size and distance of objects seen in the convex mirror.
- Adjust the mirror so you can just see the side of your vehicle.

VISOR VANITY MIRROR

The optional visor vanity mirror is located on the upper surface of the right-hand sun visor. Swing the sun visor down for access to the mirror.

SUN VISOR ADJUSTMENT

- Grasp the visor by the rear edge and pull downward to position the visor in the upper portion of the windshield.
- Remove the visor from its retainer (if equipped), pull the bottom edge down, and swing the visor to one side to position at the side window.
- Adjustment of the screw at the pivot point will loosen or tighten the visor on its shaft.

MANUAL SEAT ADJUSTMENT

The front bucket seats may be adjusted forward or rearward by moving the control lever at the front of the seat. Move the lever toward the left side of the car to release the locking mechanism; then exert slight body pressure to move the seat to the desired position. Release the control lever to lock the seat in the desired position.

Adjust Driver Seat While Parked

CAUTION: Do not adjust a manually operated driver's seat while the car is moving. The seat could move suddenly and cause the driver to lose control of the vehicle.

After adjusting a manually operated seat, push it back and forth to be sure it will not move. Take the car to your dealer for service if either seat adjuster does not latch.

On models with optional manual adjustment seats, the following controls are provided:

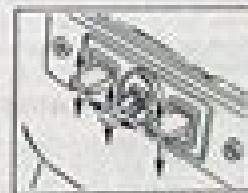

- The knob on the left-hand side of the seatback adjusts the support of the seatback to the contour of the back of the person in the seat. While leaning forward in the seat, turn the knob counterclockwise to increase support or clockwise to decrease support.

- The knob on the right-hand side of the seatback adjusts the outer portions (wings) of the seatback to the person in the seat. To adjust the outer portions of the seatback (holster), turn the knob clockwise to move the wings inward or counterclockwise to move them outward.
- The knob on the outboard side of the seat cushion controls the inward and outward position (holster) of the outer portions of the seat cushion for individual comfort. Turn the knob counterclockwise for inward adjustment or clockwise for outward adjustment.
- A thigh support is provided at the front of the seat cushion. Pull the handle at the front center of the seat cushion up and toward the front of the car to increase thigh support. To decrease support, pull up slightly on the handle, move the handle toward the seat cushion and push the handle down (to engage the detent) when the thigh support reaches the position desired.

POWER SEAT ADJUSTMENT

The six-way power seat control switch is located on the driver's seat left side panel. The seat can be operated as follows:

1. The front control provides up and down movement of the front of the seat.
2. The center control provides forward and backward movement and up and down movement of the entire seat.
3. The rear control provides up and down movement of the rear of the seat.

RECLINING SEAT

The multi-position reclining front seats can be tilted forward or rearward of the normal position by lifting the control lever at the outboard side of the seat cushion and exerting rearward pressure on the seatback.

Release the control lever to lock the seatback in place. Lifting the lever with no pressure on the seatback will allow it to return to any of its forward positions.

Seatback Position When Moving

CAUTION: To reduce the risk of sliding under the lap belt during a collision, an occupied reclining seat should not be reclined any more than needed for comfort. The seatback and seat belts provide best restraint only when the rider is sitting well back and straight up in the seat. (The lap belt is designed to spread the force of a collision over the hips. If you are reclined, the lap belt may slide past your hips and apply restraint forces directly to the abdomen. Therefore, in the event of a frontal collision, the risk of personal injury may increase with increasing recline of the seatback.)
