project management disciplines to maintain their principal strengths and combining them in a pragmatic way on the basis of an integrated architecture This book goes beyond descriptions of management disciplines found elsewhere in its treatment of the architecture integration necessary to interlink product process and resources data Only with this connectedness can the interoperation of the management essentials yield maximum efficiency and effectiveness Commercial Aircraft Projects Managing the Development of Highly Complex Products proposes an integrated architecture and details step by step how it can be used for the management of commercial aircraft development projects The findings can also be applied to other industrial sectors that produce complex hardware based on design inputs *ARBA Guide to Subject Encyclopedias and Dictionaries* Susan C. The Design of Aircraft Landing Gear Robert Kyle Schmidt,2021-02-18 The aircraft landing gear and its associated systems represent a compelling design challenge simultaneously a system a structure and a machine it supports the aircraft on the ground absorbs landing and braking energy permits maneuvering and retracts to minimize aircraft drag Yet as it is not required during flight it also represents dead weight and significant effort must be made to minimize its total mass The

Design of Aircraft Landing Gear written by R Kyle Schmidt PE B A Sc Mechanical Engineering M Sc Safety and Aircraft Accident Investigation Chairman of the SAE A 5 Committee on Aircraft Landing Gear is designed to guide the reader through the key principles of landing system design and to provide additional references when available Many problems which must be confronted have already been addressed by others in the past but the information is not known or shared leading to the observation that there are few new problems but many new people The Design of Aircraft Landing Gear is intended to share much of the existing information and provide avenues for further exploration The design of an aircraft and its associated systems including the landing system involves iterative loops as the impact of each modification to a system or component is evaluated against the whole It is rare to find that the lightest possible landing gear represents the best solution for the aircraft the lightest landing gear may require attachment structures which don't exist and which would require significant weight and compromise on the part of the airframe structure design With those requirements and compromises in mind The Design of Aircraft Landing Gear starts with the study of airfield compatibility aircraft stability on the ground the correct choice of tires followed by discussion of brakes wheels and brake control systems Various landing gear architectures are investigated together with the details of shock absorber designs Retraction kinematics and mechanisms are studied as well as possible actuation approaches Detailed information on the various hydraulic and electric services commonly found on aircraft and system elements such as dressings lighting and steering are also reviewed Detail design points the process of analysis and a review of the relevant requirements and regulations round out the book content The Design of Aircraft Landing Gear is a landmark work in the industry and a must read for any engineer interested in updating specific skills and students preparing for an exciting career

[AIRBUS: HOW SILENT RIVALRY WITH BOEING SHAPED ADVANCEMENTS IN AVIATION](#) MAX EDITORIAL, 2025-04-15 The Beginning of Two Giants The aviation industry has always been marked by innovation technical challenges and fierce rivalry Two giants dominate the sector Airbus and Boeing While both have played crucial roles in the development of modern aviation the rivalry between these companies goes far beyond market competition It is a quiet but intensely strategic battle that has led to technological advances and changes in the way we travel around the world Airbus was founded in 1970 as a European consortium to challenge the dominance of Boeing which was already an established power in the commercial aircraft market While Boeing already had decades of experience and a robust aircraft portfolio Airbus emerged with an innovative proposal the creation of a line of large high capacity aircraft with a focus on integrating new aviation technologies However the rivalry between the two companies did not emerge as just an economic competition It was fueled by different design philosophies engineering approaches and of course a very different vision of the future of aviation US based Boeing had already dominated the market with its 707 series aircraft and later the iconic 747 On the other hand European based Airbus sought to innovate by creating aircraft that were more fuel efficient and comfortable for passengers One of the early milestones in this quiet rivalry was the development of the Airbus A300 the first commercial

airliner to be designed and manufactured by Airbus The A300 was a moderate success but its true significance was the way it challenged traditional notions of aviation design Boeing up until then felt unchallenged However this initial challenge would trigger a series of breakthroughs that would change the industry forever Practical Example In the late 1960s Boeing dominated the market with the 747 the first jumbo jet However with the launch of the Airbus A300 in 1972 Airbus introduced the idea of a wide body aircraft that could compete with the Boeing giant This spurred Boeing to evolve rapidly resulting in the development of the 767 a wide body aircraft that would debut on the market in 1982 The challenge of a growing rivalry forced Boeing to think outside the box and accelerate its own technological advances *Readers' Guide to Periodical Literature* ,1919
