

AIR DISTRIBUTION CONTROL

Air distribution on the IHKA E39 is controlled through five stepper motors and a bowden cable. The five stepper motors include:

Of the five stepper motors, the fresh air motor is operated as on the E38 system in a conventional manner. The other four are controlled through the M Bus with a micro processor on each motor.

STRATIFIED AIR

The stratified face vent function is adjusted with a bowden cable as on the E36 IHKA system. The stratified air output is only possible at the center face vents. The system operates the same as the stratification flap on the E36 - IHKA system.

The cable manipulates the stratification flap in the IHKA housing allowing cold air to flow into the face vent air ducts mixing with heated air.
