system for growing plants by fertilizing them with the waste water from fish in a sustainable closed system. A combination of the best of aquaculture and hydroponics, aquaponic gardening is an amazingly productive way to grow organic vegetables, greens, herbs, and fruits while providing the added benefits of fresh fish as a safe, healthy source of protein. On a larger scale, it is a key solution to mitigating food insecurity, climate change, groundwater pollution, and the impacts of overfishing on our oceans. Aquaponic Gardening is the definitive do-it-yourself home manual focused on giving you all the tools you need to create your own aquaponic system and enjoy healthy, safe, fresh, and delicious food all year round. Starting with an overview of the theory, benefits, and potential of aquaponics, the book goes on to explain system location considerations and hardware components. The living elements—fish, plants, bacteria, and worms—putting it all together, starting and maintaining a healthy system. Aquaponics systems are completely organic. They are four to six times more productive and use 90 percent less water than conventional gardens. Other advantages include no weeds, fewer pests, and no watering, fertilizing, bending, digging, or heavy lifting. In fact, there really is no downside. Anyone interested in taking the next step towards self-sufficiency will be fascinated by this practical, accessible, and well-illustrated guide. An excellent primer for anyone considering home-scale aquaculture. Peter Bane, publisher, Permaculture Activist and author, *The Permaculture Handbook*. [Two Percent Solutions for the Planet](#) Courtney White, 2015. *Two Percent Solutions for the Planet* profiles fifty innovative practices that soak up carbon dioxide in soils, reduce energy use, sustainably intensify food production, and increase water quality. The two percent refers to the amount of new carbon in the soil needed to reap a wide variety of ecological and economic benefits: the percentage of the nation's population who are farmers and ranchers and the low financial cost in terms of GDP needed to get this work done. As White explained in *Grass Soil Hope*, a highly efficient carbon cycle captures, stores, releases, and recaptures biochemical energy, mitigating climate change, increasing water storage capacities in soil, and making green plants grow. Best of all, we don't have to invent anything new; a wide variety of innovative ideas and methods that put carbon back into the soil have been field-tested and proven to be practical and profitable. They're mostly low-tech, too, relying on natural resources such as sunlight, green plants, animals, compost, beavers, creeks, and more. In *Two Percent Solutions for the Planet*, White expands what he calls the regenerative toolbox to include holistic grazing, edible forests, biochar, weed-eating livestock, food co-ops, keyline plowing, restoration agriculture, bioenergy, aquaponics, animal power, Farm Hack, bees, bears, wildlife corridors, rainwater harvesting, native seeds, and various other projects from across the United States as well as in Canada, Europe, and Australia. These short, engaging success stories will help readers connect the dots between diverse, exciting, and pragmatic practices and inspire them to dig deeper into each individual story and concept, energized by the news that solutions do exist.

*Urban Agriculture and Community Values* Lisa Newton, 2020-03-18. This book addresses the evolving crisis in agriculture and sketches the community economy that grounds agricultural enterprise more accurately than the industrial model. In its current practice, agriculture is in the United States but increasingly in the rest of the world, unsustainable and destructive.

The most immediately unsustainable feature of industrial agriculture is its dependence on the products of petroleum as feedstock for fertilizers herbicides and pesticides and as fuel for the farm machinery and transport of agricultural products into the cities The problems of agriculture and in general the food systems to which it is attached range from the vulnerability of monocultures to new and stronger pests to the emerging medical problem of obesity The need for agricultural reform is widely acknowledged one part of the new work being done suggests that food production in the cities may solve several of its problems at once This book is suitable for both undergraduate and graduate students in agriculture and environmental studies
