Complications in Surgery Michael W. Mulholland, Gerard M. Doherty, 2012-11-13 *Complications in Surgery* Second Edition offers authoritative recommendations for preventing and managing complications in all current general surgery procedures The opening sections discuss institutional risk management issues and risks common to all operations such as wound healing problems infection shock and complications in immunosuppressed patients Subsequent sections focus on complications of specific procedures in thoracic vascular gastric endocrine breast and oncologic surgery as well as organ transplantation and pediatric surgery This edition includes new information on surgical quality assessment and patient safety and updated information in the organ specific chapters Fundamentals of General Surgery Francesco Palazzo, 2018-06-26

This book provides a comprehensive guide to the surgical skills required during general surgery. General Concepts are covered with descriptions of basic terminology, the logic behind specific approaches, limitations of specific skills, technical and practical considerations, and safety of using specific approaches and skills. More advanced topics including gastro intestinal anastomosis, exploring a patient after a major trauma, and managing crisis situations are also discussed, as well as current controversies and future directions within general surgery. *Fundamentals of General Surgery* is relevant to trainees in general surgery and its subspecialties and aims to give them an easy to access resource that contains real life examples, iconography, and recommended further reading.

Surgical Education Heather Fry, Roger Kneebone, 2011-08-29. *Surgical Education: Theorising an Emerging Domain* delineates surgical as opposed to medical education as a new and emerging field of academic enquiry. This reflects profound changes in healthcare training and practice on an international basis. As such, this book introduces, examines, and explores the contribution of selected concepts and theories to surgical learning and practice. The first four chapters consider core facets of surgical education such as simulation, while subsequent chapters take a key idea, often well known in another field, and examine its relevance to surgical education. Of course, performing invasive procedures is no longer the exclusive preserve of traditional surgeons. Boundaries between surgery and the interventional specialties, radiology, cardiology, intensive care, are becoming increasingly blurred, especially as technology continues to expand. Changing work patterns and explosive technological development mark this out as a major growth area. New educational approaches, e.g. the use of simulation, are emerging. And all clinical practice is a team activity where clinicians from many specialties, medicine, nursing, allied professions, come together with shared goals. For all the above groups and their patients, education, teaching, training, learning, and assessment is of crucial importance. Yet the unique characteristics of surgical education have not previously been addressed from an educational perspective, nor have its possibilities as a new research domain been mapped. The domain needs to be theorised and its epistemological foundations established. There is thus both a need and a market for a definitive work in this area, aimed at surgeons, other clinicians, non-clinicians, educators, and others interested in this new domain.

Anatomy of a Tumour Sudhansu Mohanty, 2013-07-01. The patient is Sudhansu Mohanty, an Indian civil servant in his early fifties. His scourge is the carcinoid tumour, which unknown to him, he has been carrying around for some time. Mohanty's introduction to this scourge was gradual, starting with an almost continuous fatigue, followed by intermittent diarrhoea, a loss of appetite, enhanced perspiring, especially while eating, and a wasting away of muscles. He ignored them all; he lived in denial. Before he knew it, he was overtaken by nemesis in the form of a sharp drop in his haemoglobin. The cause is carcinoid, a rare form of cancer, rare in terms of appearance, hard to detect in its nascent stages, and therefore all the more deadly. In Mohanty's case, it was suspected early, post colonoscopy, thanks to the perspicacity of his gastroenterologist, who most unusual for a physician, pronounced, 'I consider this malignant. I want to go in and see.' The author takes the reader on his four year long odyssey with carcinoid, the rogue cancer. He touches lightly on his back to back
