searched for text digitization projects increasingly strive to create digital text which can be searched and otherwise automatically processed in addition to facsimiles Indeed the emerging field of digital humanities heavily relies on the availability of digital text for its studies Together with the increasing availability of historical texts in digital form there is a growing interest in applying natural language processing NLP methods and tools to historical texts However the specific linguistic properties of historical texts the lack of standardized orthography in particular pose special challenges for NLP This book aims to give an introduction to NLP for historical texts and an overview of the state of the art in this field The book starts with an overview of methods for the acquisition of historical texts scanning and OCR discusses text encoding and annotation schemes and presents examples of corpora of historical texts in a variety of languages The book then discusses specific methods such as creating part of speech taggers for historical languages or handling spelling variation A final chapter analyzes the relationship between NLP and the digital humanities Certain recently emerging textual genres such as SMS social media and chat messages or newsgroup and forum postings share a number of properties with historical texts for example nonstandard orthography and grammar and profuse use of abbreviations The methods and techniques required for the effective processing of historical texts are thus also of interest for research in other domains Table of Contents Introduction NLP and Digital Humanities Spelling in Historical Texts Acquiring Historical Texts Text Encoding and Annotation Schemes Handling Spelling Variation NLP Tools for Historical Languages Historical Corpora Conclusion Bibliography   Introduction to Critical Care Nursing E-Book Mary Lou Sole,Deborah Goldenberg Klein,Marthe J. M. Tobias,Angela Hickman,2017-01-12 Coding and Documentation Compliance for the ICD and DSM provides professionals professors and students with a logical and practical way of understanding a difficult topic in healthcare for the clinician coding Established professionals will find the tools they need to comply with the ICD series HIPAA and integrated care models Professors and students will appreciate having a systemized standardized approach to teaching and learning the more complex aspects of ICD compliance The interplay between the ICD and DSM manuals is also explicated in clear terms *Molecular Architecture and Dynamics of Meiotic Chromosomes* Ricardo Benavente,Mónica Pradillo,Pedro A. San-Segundo,2024-03-11 Meiosis is a special type of cell division that allows the generation of haploid gametes and is a key process for sexual reproduction of animals plants and fungi Haploidization requires that meiotic cells undergo a series of unique processes

namely pairing synapsis recombination and segregation of homologous chromosomes This involves profound meiosis specific changes in the protein composition and architecture of homologous chromosomes as well as of the condensation and folding of chromatin that require a critical timing and regulation Despite this enormous complexity different organisms may achieve haploidization through common molecular mechanisms A major goal of this article collection is to provide an overview of how meiotic chromosomes and their components are critically involved in the mechanisms of haploidization and how dynamic protein complexes yield important structural intermediates and temporal regulation to this process We welcome submissions of original articles mini reviews and review articles dealing with the composition architecture function and regulation of meiotic chromosomes of animals plants and fungi using microscopic biochemical molecular genetic and or omic techniques
