*Beyond Greed and Fear* Hersh Shefrin, 2002 Even the best Wall Street investors make mistakes No matter how savvy or experienced all financial practitioners eventually let bias overconfidence and emotion cloud their judgement and misguide their actions Yet most financial decision making models fail to factor in these fundamentals of human nature In *Beyond Greed and Fear* the most authoritative guide to what really influences the decision making process Hersh Shefrin uses the latest psychological research to help us understand the human behavior that guides stock selection financial services and corporate financial strategy Shefrin argues that financial practitioners must acknowledge and understand behavioral finance the application of psychology to financial behavior in order to avoid many of the investment pitfalls caused by human error Through colorful often humorous real world examples Shefrin points out the common but costly mistakes that money managers security analysts financial planners investment bankers and corporate leaders make so that readers gain valuable insights into their own financial decisions and those of their employees asset managers and advisors According to Shefrin the financial community ignores the psychology of investing at its own peril *Beyond Greed and Fear* illuminates behavioral finance for today's investor It will help practitioners to recognize and avoid bias and errors in their decisions and to modify and improve their overall investment strategies

**Theory of Zipf's Law and Beyond** Alexander I. Saichev, Yannick Malevergne, Didier Sornette, 2009-11-04 Zipf's law is one of the few quantitative reproducible regularities found in economics It states that for most countries the size distributions of cities and of firms with additional examples found in many other scientific fields are power laws with a specific exponent the number of cities and firms with a size greater than  $S$  is inversely proportional to  $S$  Most explanations start with Gibrat's law of proportional growth but need to incorporate additional constraints and ingredients introducing deviations from it Here we present a general theoretical derivation of Zipf's law providing a synthesis

and extension of previous approaches First we show that combining Gibrat's law at all firm levels with random processes of firm births and deaths yield Zipf's law under a balance condition between a firm's growth and death rate We find that Gibrat's law of proportionate growth does not need to be strictly satisfied As long as the volatility of firm sizes increase asymptotically proportionally to the size of the firm and that the instantaneous growth rate increases not faster than the volatility the distribution of firm sizes follows Zipf's law This suggests that the occurrence of very large firms in the distribution of firm sizes described by Zipf's law is more a consequence of random growth than systematic returns in particular for large firms volatility must dominate over the instantaneous growth rate

**The Good Life Beyond Growth** Hartmut Rosa,Christoph Henning,2017-08-15 Many countries have experienced a decline of economic growth for decades an effect that was only aggravated by the recent global financial crisis What if in the 21st century this is no longer an exception but the general rule Does an economy without growth necessarily bring hardship and crises as is often assumed Or could it be a chance for a better life Authors have long argued that money added to an income that already secures basic needs no longer enhances well being Also ecological constraints and a sinking global absorption capacity increasingly reduce the margin of profitability on investments Efforts to restore growth politically however often lead to reduced levels of social protection reduced ecological and health standards unfair tax burdens and rising inequalities Thus it is time to dissolve the link between economic growth and the good life This book argues that a good life beyond growth is not only possible but highly desirable It conceptualizes the good life as a fulfilled life that is embedded in social relations and at peace with nature independent of a mounting availability of resources In bringing together experts from different fields this book opens an interdisciplinary discussion that has often been restricted to separate disciplines Philosophers sociologists economists and activists come together to discuss the political and social conditions of a good life in societies which no longer rely on economic growth and no longer call for an ever expanding circle of extraction consumption pollution waste conflict and psychological burnout Read together these essays will have a major impact on the debates about economic growth economic and ecological justice and the good life in times of crisis
