Introducing the IB Diploma Programme Marc Abrioux, Jill Rutherford, 2013-02-14 Schools wishing to introduce the IB diploma programme are faced with major investment in terms of time effort and money in order to become authorised This manual is a resource for schools already offering the diploma as well as for prospective diploma schools

Pseudomonas Aeruginosa, Biology, Genetics, and Host-pathogen Interactions Dara W. Frank, 2012-02-02 The opportunistic pathogen *Pseudomonas aeruginosa* offers a rich variety of biologically relevant topics to explore and serves as a model system to understand the interactions of Gram negative bacteria with human hosts The organism adapts readily to most environments It has a large and variable genome with a great deal of metabolic potential *P. aeruginosa* encodes a variety of regulatory systems to fine tune gene expression and integrate environmental signals This organism can infect both plants and animals and produces a plethora of enzymes and factors that can overcome host defenses Moreover it has the ability to change between the states of a sedentary colonizer to an invasive and highly motile organism Clinically the bacterium is resistant to many antibiotics making it difficult to treat and impossible to eradicate from the lungs of patients with cystic fibrosis Intrinsic antibiotic resistance combined with an armamentarium of tissue degradative enzymes makes it imperative to possess a comprehensive understanding of the biology genetics and pathogenesis of this organism so that novel therapeutics based on virulence product neutralization can be designed and implemented This Research Topics issue will be devoted to updating the current understanding of *P. aeruginosa* systems as they relate to its different lifestyles in different environments The underlying theme is to provide broad overviews and to integrate protein structure function and gene regulation as it relates to the biology of this bacterium

Media Exposure During Infancy and Early Childhood Rachel Barr, Deborah Nichols Linebarger, 2016-11-24 This book discusses the burgeoning world of young children's exposure to educational media and its myriad implications for research theory practice and policy Experts across academic disciplines and the media fill knowledge gaps and address concerns regarding apps eBooks and other screen based technologies which are being used by younger and younger children and content delivery and design Current research shows the developmental nuances of the child as learner in home school and mobile contexts and the changes as parenting and pedagogy accommodate the complexities of the new interactive world The book also covers methods for evaluating the quality of new media and prosocial digital innovations such as video support for separated families and specialized apps for at risk toddlers Highlights of the coverage The role of content and context on learning and development from mobile media Learning from TV and touchscreens during early childhood Educational preschool programming How producers craft engaging characters to drive content delivery The parental media mediation context of young children's media use Supporting children to find their own agency in learning

Media Exposure During Infancy and Early Childhood is an essential resource for researchers clinicians and related professionals and graduate students in diverse fields including infancy and early childhood development child and school

psychology social work pediatrics and educational psychology **Mesenchymal Stromal Cells** Peiman Hematti, Armand Keating, 2013-01-16 Mesenchymal Stromal Cell MSC biology has been studied for more than 4 decades and the cells have been investigated for potential clinical applications for more than 15 years Progress has become exponential over the past decade due mainly to the broad therapeutic potential of these cells However MSC studies have also been subject to controversy and increasing scrutiny as new mechanisms of action are reported and ever expanding therapeutic applications pursued In this book leading authorities from all over the world who are actively involved in this field provide state of the art knowledge of the basic biology translational requirements and latest clinical experience with MSCs This cutting edge book is the ideal resource for scientists and clinicians interested in pursuing an important and rapidly developing field of research that will eventually help patients and address urgent unmet medical needs Features include Coverage of the biology of MSCs latest understanding of mechanisms of action and role in tissue homeostasis and regeneration Identifying the potential of MSCs in proceeding from bench to bedside from regulatory GMP production ethical and safety aspects Critical analysis of clinical studies and the potential of MSCs to treat a wide variety of human diseases and tissues *Anthropology and Cryptozoology* Samantha Hurn, 2016-11-03 Cryptozoology is best understood as the study of animals which in the eyes of Western science are extinct unclassified or unrecognised In consequence and in part because of its selective methods and lack of epistemological rigour cryptozoology is often dismissed as a pseudo science However there is a growing recognition that social science can benefit from engaging with it for as social scientists are very well aware scientific categorisation and explanation represents just one of a myriad of systems used by humans to enable them to classify and make sense of the world around them In many cultural contexts myth folk classification and lived experience challenge the truth expounded by scientists With a reflexive anthropological approach and drawing on rich empirical and ethnographic studies from around the world this volume engages with the theoretical and methodological issues raised by reported sightings of unrecognised animals Bringing into sharp focus the anthropological value and challenges for methodology posed by beliefs about unclassified creatures Anthropology and Cryptozoology Exploring encounters with mysterious creatures will be of interest to anthropologists sociologists and geographers working in the fields of research methods anthrozoology mythology and folklore and human animal interaction **Legal Methods of Mainstreaming Climate Change Adaptation in Chinese Water Management** Xiangbai He, 2016-01-29 This book addresses why whether and how the existing legal framework on water management in China could make climate change adaptation a mainstream issue The book uses a table to illustrate the distinctions and similarities between IWRM and water centered adaptation to analyze the possibilities of mainstreaming adaptation The new water planning processes and EIA are also illustrated in the form of figures showing the differences after factoring in adaptation considerations Interviews with water managers to obtain their perception and attitudes towards climate change adaptation offer new perspectives for readers The adaptation mainstreaming approach which finds a way to

balance various interests and tasks will arouse the interests of those readers who argue that climate change is only one of the issues challenging water management and that poverty reduction environmental protection and living standard improvement are even more important Readers will also be interested to discover that the adaptation mainstreaming approach could be applied in water management institutions such as water planning and EIA In addition the book offers a clear explanation of the challenges of adaptation to the existing water related legal framework from a theoretical perspective and provides theoretical and practical recommendations

Changing Global Perspectives on Horseshoe Crab Biology, Conservation and Management Ruth H.

Carmichael,Mark L. Botton,Paul K.S. Shin,Siu Gin Cheung,2015-11-09 This book reports significant progress of scientific research on horseshoe crabs including aspects of evolution genetics ecology population dynamics general biology and physiology within the recent 10 years It also highlights the emerging issues related to world wide conservation threats status and needs The contributions in this book represent part of an ongoing global effort to increase data and concept sharing to support basic research and advance conservation for horseshoe crabs Orphan Crops: Breeding and Biotechnology for

Sustainable Agriculture, Food and Nutrition Simon E. Bull, Jill Margaret Farrant, Rita Hogan Mumm, Zerihen Tadele, 2024-01-18 Orphan crops play an important role in food and nutrition security especially in growing economies where small holder farmers produce the majority of food Despite their importance in global agriculture and their often remarkable nutrient content and adaptation to challenging environmental conditions orphan crops have received limited attention by the scientific community and industry However the diversity of neglected plant species provides a large genetic resource that could significantly contribute to broadening the biodiversity of trait desired crops for novel value chains sustainable development and food security The uptake of new plant breeding techniques notably genome editing as well as omic tools are now accelerating translation of basic research and facilitating the exploration of orphan crops These advancements also give rise to public and politic engagement discussions to maximize socio economic impact Given that the greatest need for food and nutritional security is in growing economies issues of food sovereignty and sustainability of their food systems become front and centre There is now an exceptional opportunity to tackle some of the major current challenges in agriculture including climate change sustainable cropping systems food quality and nutritional security through broadening research in wild relatives of crops and on orphan species This Research Topic seeks to showcase research on neglected plants using advanced molecular technologies e g genome sequencing omics etc and new plant breeding approaches methods and tools This Research Topic will also discuss the challenges and opportunities arising when modern breeding techniques are applied for translational research

The biology and ecology of ticks shape the potential for the transmission of zoonotic pathogens. Agustín Estrada-Peña, Jose De La Fuente, 2015-02-24 Ticks are noticeable by the high diversity of pathogens they can transmit most of them with implications in human and animal health Ticks are arachnids meaning that they do not share the biological and ecological features of the mosquitoes and other parasitic Diptera The natural foci of tick borne pathogens may be as large as a continent or be restricted to small portions of a country without apparently too many similar features The life cycle of the ticks involved three developing instars The precise relationships of ticks and their hosts

the specific seasonal pattern of activity of ticks and the still poorly known molecular relationships between ticks and the pathogens they can transmit make these vectors a specially fecund field of research. Importantly, extensive studies on the biological and ecological relationships of ticks and abiotic climate and vegetation conditions have revealed the fine tuning of the ticks and the pathogens they transmit together with the biological effects of host and the driving features by the climate. The studies on tick transmitted pathogens have been on the rise in the last years. There is a growing interest in understanding the somewhat complex relationships between the landscape, the climate, the vectors and the pathogens because the concerns of spread probably driven by subtle changes in climate and man made alterations of the landscape. Studies on Lyme borreliosis are addressing the interesting issue of the relationships between the climate, the tick activity patterns and the selection of strains according to the reservoir availability. Furthermore, the expanding field of habitat suitability modeling has been applied with different degrees of success to evaluate and quantify the risk of disease transmission. In such exponentially growing field, revisionary books are clearly welcome additions to the bibliographical tools of researchers. It is however necessary the compilation of works devoted to explore the tip of the iceberg in the field of research. In this Research Topic we wish to summarize and review the studies on ecology, molecular biology and tick host pathogens interactions provided to resolve the important issues of ticks and pathogens. We want not only the results obtained by newly developed molecular tools but rigorous reviews of the most recent advances in these issues. This Topic will cover aspects of both human and animal health with special interest on zoonoses. Aspects of the biology of the ticks as affecting the transmission of pathogens are of special interest in this Topic. Studies on ticks of the poorly known family Argasidae as related to their involvement on pathogen transmission are especially welcome. We also wish to describe the perspective of the field in the future. Finally, the presentation of ongoing original works is greatly encouraged.
