*Swinglines* Fernando Benadon, 2024-06-07 The way rhythm is taught in Western classrooms and music lessons is rooted in a centuries old European approach that favors metric levels within a grand symmetrical grid Swinglines encourages readers to experience rhythms even gridded ones as freewheeling affairs irrespective of the metric hierarchy It shows that rhythms traditionally framed as deviations and non isochronous have their own identities They are coherent products of precise musical thought and action Rather than situating them in the neither here nor there author Fernando Benadon takes a more inclusive view one where isochrony and metric grids are shown as particular cases within the universe of musical time      **Theology**, 2004-02-07      **Beating Ana**,      The Beats in Mexico David Stephen Calonne, 2022-04-15 Mexico features prominently in the literature and personal legends of the Beat writers from its depiction as an extension of the American frontier in Jack Kerouac's *On the Road* to its role as a refuge for writers with criminal pasts like William S Burroughs Yet the story of Beat literature and Mexico takes us beyond the movement's superstars to consider the important roles played by lesser known female Beat writers The first book length study of why the Beats were so fascinated by Mexico and how they represented its culture in their work this volume examines such canonical figures as Kerouac Burroughs Ginsberg Lamantia McClure and Ferlinghetti It also devotes individual chapters to women such as Margaret Randall Bonnie Bremser and Joanne Kyger who each made Mexico a central setting of their work and interrogated the misogyny they encountered in both American and Mexican culture *The Beats in Mexico* not only considers individual Beat writers but also places them within a larger history of countercultural figures from D H Lawrence to Antonin Artaud to Jim Morrison who mythologized Mexico as the land of the Aztecs and Maya where shamanism and psychotropic drugs could take you on a trip

far beyond the limits of the American imagination

**The Evolution of Rhythm Cognition: Timing in Music and Speech** Andrea Ravignani, Henkjan Honing, Sonja A. Kotz, 2018-07-24 Human speech and music share a number of similarities and differences One of the closest similarities is their temporal nature as both i develop over time ii form sequences of temporal intervals possibly differing in duration and acoustical marking by different spectral properties which are perceived as a rhythm and iii generate metrical expectations Human brains are particularly efficient in perceiving producing and processing fine rhythmic information in music and speech However a number of critical questions remain to be answered Where does this human sensitivity for rhythm arise How did rhythm cognition develop in human evolution How did environmental rhythms affect the evolution of brain rhythms Which rhythm specific neural circuits are shared between speech and music or even with other domains Evolutionary processes long time scales often prevent direct observation understanding the psychology of rhythm and its evolution requires a close fitting integration of different perspectives First empirical observations of music and speech in the field are contrasted and generate testable hypotheses Experiments exploring linguistic and musical rhythm are performed across sensory modalities ages and animal species to address questions about domain specificity development and an evolutionary path of rhythm Finally experimental insights are integrated via synthetic modeling generating testable predictions about brain oscillations underlying rhythm cognition and its evolution Our understanding of the cognitive neurobiological and evolutionary bases of rhythm is rapidly increasing However researchers in different fields often work on parallel potentially converging strands with little mutual awareness This research topic builds a bridge across several disciplines focusing on the cognitive neuroscience of rhythm as an evolutionary process It includes contributions encompassing although not limited to 1 developmental and comparative studies of rhythm e g critical acquisition periods innateness 2 evidence of rhythmic behavior in other species both spontaneous and in controlled experiments 3 comparisons of rhythm processing in music and speech e g behavioral experiments systems neuroscience perspectives on music speech networks 4 evidence on rhythm processing across modalities and domains 5 studies on rhythm in interaction and context social affective etc 6 mathematical and computational e g connectionist symbolic models of rhythmicity as an evolved behavior
