Alternative Approaches to Human Blood Resources in Clinical Practice Cees Smit Sibinga,P.C. Das,J.C. Fratanoni,1998-09-30 Currently blood is a volatile issue The safety of blood and the quantification of transfusion risks have been dominant themes that have stimulated the development of alternative approaches in this rapidly developing area In clinical medicine conventional blood and its components are used in supportive therapies dependent on the choice of apparent uncritical trigger factors A compounding factor is depth of prospective clinical trials for evidence Such trials in critical care areas would be of enormous value not only in recording adverse effects and under transfusion but also indicating the value of decision analysis and cost effectiveness in transfusion practice Alternative approaches include the use of cytokines growth factors humanised monoclonal antibodies recombinant plasma factors and buffy coat derived natural human interferons These are being increasingly implemented in the clinic Solutions for oxygen transport are being developed and fibrinogen coated microcapsules are being investigated for thrombocytopenia In surgical patients various crystalloid and colloid combinations are explored as volume replacements To avoid allogeneic transfusions beneficial blood saving methods include various strategies such as autologous deposits normovolemic haemodilution and various agents including aprotinin tranexamic acid desmopressin and erythropoietin but their use in hospital shows considerable variations That umbilical cord blood could be a significant source of allogeneic stem cells in related and unrelated transplantation is illustrated by the

increasing number of cord blood banks in Europe and elsewhere Future blood resources are likely to face several challenges immediate challenges relate to increased regulatory and political oversights intermediate solutions would offer some improvements in public health and alleviate public fear but probably not address the economic challenges thrust upon the medical care system As we approach the year 2000 the major concerns about transfusion medicine remain its logistics safety and effectiveness This theme is presented in the proceedings of the 22nd International Symposium on Blood Transfusion developed in 21 up to date topics collected and discussed in four sections This book will be of timely value to students professionals and all others interested or involved in the field of transfusion medicine whether clinical or related

Mengel, 2013-11-11 As we move into the 21st century it is becoming increasingly difficult to offer appropriate introductory clinical experiences for medical students Many schools offer clinical experiences in the first year of medical school when the learner has little background in the traditions and origins of the doctor patient interaction Others begin this process in the second year after a professional language base has been established but concise educational materials are scarce that integrate the meaning of the privileged clinical encounter with the process and content of interviewing and examining patients In the tertiary hospitals where most medical schools are based the educators must provide an orientation to the clinical encounter an intensely personal experience in the midst of glittering technological marvels that easily distract both the novice physician and the wizened teacher Understanding the context and historical basis for the privilege of interviewing and examining another person about intimate matters relating to health and disease is essential to this process Considering these factors this textbook is written

to assist medical educators and medical students involved in early clinical training As the demand for high tech medicine has accelerated so has the public concern over the loss of high touch or compassionate humane interactions with physicians Physicians are perceived as more concerned with readouts from machines and fiberoptic views of the patient than with understanding and caring about the people we have labeled as patients
