Approaching The Ancient Artifact:

Approaching the Ancient Artifact Amalia Avramidou, Denise Demetriou, 2014-08-25 This volume consists of forty contributions written by an internationally renowned selection of scholars. The authors adopt an interdisciplinary methodology examining both literary and archaeological sources and a comparative perspective that transgresses national, chronological, and cultural boundaries in order to investigate the nature of the links between text and image. This multifaceted approach to the study of ancient artifacts enables the authors to treat art and artistic production as activities that do not merely mirror social or cultural relationships but rather, and more significantly, as activities that create social and cultural relationships. The essays in this book are motivated by their authors' belief that there is no simple direct link between art and myths, art and text, or art and ritual, and that art should not be relegated to the role of a by-product of a literate culture. Instead, the contextual and symbolic analyses of artifacts and representations offered in this volume elucidate how art actively shaped myth, how it changed texts, how it transformed ritual, and how it altered the course of local, regional, and Mediterranean histories.

Vessels Claudia Brittenham, 2019 What is a vessel? As objects made for human interaction and handling, both containing and bounded by space, vessels can take many forms and be constructed of a wide variety of materials. However, they are all unified in signifying a potential for practical functioning, whether or not a particular object is in fact used in this way in its particular context. In this second volume in the *Visual Conversations in Art Archaeology* series and the first in the Center for Global Ancient Art sub-series, four essays by leading scholars tackle the category of vessels in ancient Greece, late antique Rome, pre-Columbian Mesoamerica, and ancient China. By considering the material properties of the object as container, the interactions between user and vessel, and the power of the vessel as both a conceptual category and material metaphor, they argue that many vessels and assemblages of vessels were in their own time sites of considerable intellectual power. Smart and sophisticated commentaries on the very categories that they embody, in collecting these individual case studies together, the volume offers an art historical and cross-cultural study of vessels from ancient societies, drawing illuminating comparisons and interpretations between traditions. In keeping with the aims of the series, it serves as a model for a new kind of comparative art history, one which emphasizes material culture and is attentive to questions of evidence and method, yet remains historically grounded and contextually sensitive.

West, 2013-11-27 Mathematics is playing an ever more important role in the physical and biological sciences provoking a blurring of boundaries between scientific disciplines and a resurgence of interest in the modern as well as the clas sical techniques of applied mathematics This renewal of interest both in research and teaching has led to the establishment of the series Texts in Applied Mathematics TAM The development of new courses is a natural consequence of a high level of excitement on the research frontier as newer techniques such as numerical and symbolic computer systems dynamical systems and chaos mix with and reinforce the traditional methods of applied mathematics Thus the purpose of this textbook series is to meet the current and future needs of these advances and encourage the teaching of new courses TAM will publish textbooks suitable for use in advanced undergraduate and beginning graduate courses and will complement the Applied Mathe matical Sciences AMS series which will focus on advanced textbooks and research level monographs Preface Consider a first order differential equation of form $x' = f(t, x)$ In elemen tary courses one frequently gets the impression that such equations can usually be solved i e that explicit formulas for the solutions in terms of powers exponentials trigonometric functions and the like can usually be found Nothing could be further from the truth **Religion in the Art of Archaic and Classical Greece** Tyler Jo Smith, 2021-06-18 An examination of the combined subjects of ancient Greek art and religion dealing with festivals performance rites of passage and the archaeology of death to name a few examples to explore the visual material and textual dimensions of ancient Greek religion **A Mythological Approach to Exploring the Origins of Chinese Civilization** Shuxian Ye, 2022-08-26 Is the lion the symbol of China Or should it be the

empirical research findings in teaching and learning mathematics in bilingual plurilingual education by using active methodologies specifically gamification and game based learning and teaching Covering a wide range of topics such as safety bilingual education and multimodal mathematics this major reference work is ideal for policymakers researchers academicians practitioners scholars instructors and students **Reconstructing Satyr Drama** Andreas P.

Antonopoulos, Menelaos M. Christopoulos, George W. M. Harrison, 2021-07-05 The origins of satyr drama and particularly the reliability of the account in Aristotle remains contested and several of this volume's contributions try to make sense of the early relationship of satyr drama to dithyramb and attempt to place satyr drama in the pre Classical performance space and traditions What is not contested is the relationship of satyr drama to tragedy as a required cap to the Attic trilogy Here however how Aeschylus Sophocles and Euripides to whom one complete play and the preponderance of the surviving fragments belong envisioned the relationship of satyr drama to tragedy in plot structure setting stage action and language is a complex subject tackled by several contributors The playful satyr chorus and the drunken senility of Silenos have always suggested some links to comedy and later to Atellan farce and phlyax Those links are best examined through language passages in later Greek and Roman writers and in art The purpose of this volume is probe as many themes and connections of satyr drama with other literary genres as well as other art forms putting satyr drama on stage from the sixth century BC through the second century AD The editors and contributors suggest solutions to some of the controversies but the volume shows as much that the field of study is vibrant and deserves fuller attention Literary Approaches to the Bible Douglas

Mangum, Douglas Estes, 2018-03-14 The study of the Bible has long included a literary aspect with great attention paid not only to what was written but also to how it was expressed The detailed analysis of biblical books and passages as written texts has benefited from the study of literature in classical philology ancient rhetoric and modern literary criticism This volume of the Lexham Methods Series introduces the various ways the study of literature has been used in biblical studies Most literary approaches emphasize the study of the text alone its structure its message and its use of literary devices rather than its social or historical background The methods described in Literary Approaches to the Bible are focused on different ways of analyzing the text within its literary context Some of the techniques have been around for centuries but the theories of literary critics from the early 20th century to today had a profound impact on biblical interpretation In this book you will learn about those literary approaches how they were adapted for biblical studies and what their strengths and weaknesses are **New Approaches to Old Stones** Yorke M. Rowan, Jennie R. Ebeling, 2016-04-08 Ground stone artefacts were widely

used in food production in prehistory However the archaeological community has widely neglected the dataset of ground stone artefacts until now New Approaches to Old Stones offers a theoretical and methodological analysis of the archaeological data pertaining to ground stone tools The essays draw on a range of case studies from the Levant Egypt Crete Anatolia Mexico and North America to examine ground stone technologies From medieval Islamic stone cooking vessels and

late Minoan stone vases to the use of stone in ritual and as a symbol of luxury New Approaches to Old Stones offers a radical reassessment of the impact of ground stone artefacts on technological change production and exchange

Scholarship and Controversy Stephen Halliwell, Christopher Stray, 2023-03-09 The essays collected in this volume were written to mark the centenary of the birth of Sir Kenneth Dover one of the twentieth century's most influential classical scholars Between them they explore the two major sides of his career his groundbreaking scholarship on Greek language literature and history and the more public facing roles he assumed in universities and at the British Academy which brought him into the national spotlight not without some notoriety in his later years The contributors consider the various facets of Dover's life and work from a range of perspectives which reflect the burgeoning field of the history of scholarship Some contributors were students and colleagues of Dover's at different stages of his career while others are themselves leading experts in areas of Classics to which he devoted his energies Chapters on his academic publications and on the controversies he faced in the public realm are not bland celebrations of his legacy but offer critical assessments of his motivations and achievements cumulatively demonstrating that there is much to be learned not just about Dover himself but also about the fields he helped to shape

The Geohistorical Approach Silvia Elena Piovan, 2020-05-14 This book gives a comprehensive view of the strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences The geohistorical approach can be synthetically defined as a multi and interdisciplinary approach that uses techniques and perspectives mainly from geography history and natural sciences to examine topics that inform the space time knowledge of environment territory and landscape The boundary between the application of physical and human science methods is large and hazy This volume exists at this boundary and offers an approach that utilizes both historical data from both physical and human records and GIScience e.g. GIS cartography GPS remote sensing to investigate the evolution of the environment territory and landscape through both space and time The first objective of this volume is to define the term geohistorical approach An entire chapter focuses on a review of the main disciplines that connect geography and history a review of the terms environment territory and landscape as objects of study of this approach and the definition and importance of the geohistorical approach The second goal is to describe the methods used in the geohistorical approach Eight chapters present the key methods also using examples of applications from the international context offering an awareness of the potentials limitations and accuracy of each method with particular focus on the integration of methods The third goal is to provide case studies to demonstrate the use and integration of geohistorical methods from both original material and published research A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain Italy providing an example of the integration of almost all methods described in the book

Calculus for the Life Sciences: A Modeling Approach James L. Cornette, Ralph A. Ackerman, 2019-05-25 Calculus for the Life Sciences is an entire reimagining of the standard calculus sequence with the needs of life science students as the fundamental organizing principle Those

needs according to the National Academy of Science include the mathematical concepts of change modeling equilibria and stability structure of a system interactions among components data and measurement visualization and algorithms This book addresses in a deep and significant way every concept on that list The book begins with a primer on modeling in the biological realm and biological modeling is the theme and frame for the entire book The authors build models of bacterial growth light penetration through a column of water and dynamics of a colony of mold in the first few pages In each case there is actual data that needs fitting In the case of the mold colony that data is a set of photographs of the colony growing on a ruled sheet of graph paper and the students need to make their own approximations Fundamental questions about the nature of mathematical modeling trying to approximate a real world phenomenon with an equation are all laid out for the students to wrestle with The authors have produced a beautifully written introduction to the uses of mathematics in the life sciences The exposition is crystalline the problems are overwhelmingly from biology and interesting and rich and the emphasis on modeling is pervasive An instructor s manual for this title is available electronically to those instructors who have adopted the textbook for classroom use Please send email to textbooks@ams.org for more information Online question content and interactive step by step tutorials are available for this title in WebAssign WebAssign is a leading provider of online instructional tools for both faculty and students
