Politics and Climate Change: A History Andy May, 2022-09-04 These are stories of the political corruption of science Politicians work to forge a consensus they use persuasion intimidation and avoid or suppress debate Debating an issue leads to education it shows the question is more complex than it appears it makes the public consider all sides Education leads to caution not action The politician wants a decision he wants action so no debate Once the consensus is formed the public votes laws are passed regulations issued the minority concedes and conflict is avoided Science is not a belief It exists to challenge the consensus view It is how one person can show the overwhelming majority is mistaken Scientists do not vote they debate They gather facts make observations and analyze the data and try to show the consensus opinion is wrong Politicians and scientists don't mix They are like fire and water opposites But what about when no one trusts the politician and he must have a scientist for back up What happens when the government becomes the sole source of research money We address the attempt by politicians to control scientific research and research outcomes They do this by selectively funding projects that look for potential disasters ideally global disasters People love disaster stories journalists love disaster stories scientists love to be quoted in newspapers and on television If you frighten people enough they will give up their rights for security increasing government power So it is not surprising that as government has taken over funding scientific research scientists have migrated from research that helps people to researching possible catastrophes no matter how remote the possibility Science has devolved from improving human lives to developing plots for disaster movies

Reclaiming the Atmospheric Commons Leigh Raymond, 2016-09-16 How the Regional Greenhouse Gas Initiative created a new paradigm in climate policy by requiring polluters to pay for their emissions for the first time In 2008 a group of states in the northeast United States launched an emissions trading program the Regional Greenhouse Gas Initiative RGGI With RGGI these states Connecticut Delaware Maine Maryland Massachusetts New Hampshire New Jersey New York Rhode Island and Vermont achieved what had been considered politically impossible they forced polluters to pay the public for their emissions The states accomplished this by conducting auctions of emissions allowances by 2014 they had raised more than 2.2 billion in revenues In this first in depth examination of RGGI Leigh Raymond describes this revolutionary and influential policy model and explains the practical and theoretical implications for climate policy Other cap and trade schemes had been criticized for providing private profits rather than public benefits allowing private firms to make money by buying and selling valuable rights to pollute RGGI by contrast directed virtually all emissions auction revenues to programs benefiting the public at large By reframing the issue in terms of public benefits environmental advocates emphasized the public ownership of the atmospheric commons and private corporations responsibility to pay for their use of it Raymond argues that this kind of normative reframing is significant not only for environmental policy making but also for theories of the policy process helping to explain and predict sudden policy change

How Data Happened Chris Wiggins, Matthew L. Jones, 2023-03-21 Fascinating Jill Lepore The New Yorker A sweeping history of data and its technical political and ethical impact on our world From facial recognition capable of checking people into flights or identifying undocumented residents to automated decision systems that inform who gets loans and who receives bail each of us moves through a world determined by data empowered algorithms But these technologies didn't just appear they are part of a history that goes back centuries from the census enshrined in the US Constitution to the birth of eugenics in Victorian Britain to the development of Google search Expanding on the popular course they created at Columbia University Chris Wiggins and Matthew L. Jones illuminate the ways in which data has long been used as a tool and a weapon in arguing for what is true as well as a means of rearranging or defending power They explore how data was created and curated as well as how new mathematical and computational techniques developed to contend with that data serve to shape people ideas society military operations and economies Although technology and mathematics are at its heart the story of data ultimately concerns an unstable game among states corporations and people How were new technical and scientific capabilities developed who supported advanced or funded these capabilities or transitions and how did they change who could do what from what and to whom Wiggins and Jones focus on these questions as they trace data's historical arc and look to the future By understanding the trajectory of data where it has been and where it might yet go Wiggins and Jones argue that we can understand how to bend it to ends that we collectively choose with intentionality and purpose

Reflections on Programming Systems

Liesbeth De Mol, Giuseppe Primiero, 2019-01-10 This book presents a historical and philosophical analysis of programming systems intended as large computational systems like for instance operating systems programmed to control processes The introduction to the volume emphasizes the contemporary need of providing a foundational analysis of such systems rooted in a broader historical and philosophical discussion The different chapters are grouped around three major themes The first concerns the early history of large systems developed against the background of issues related to the growing semantic gap between hardware and code The second revisits the fundamental issue of complexity of large systems dealt with by the use of formal methods and the development of grand designs like Unix Finally a third part considers several issues related to programming systems in the real world including chapters on aesthetical ethical and political issues This book will interest researchers from a diversity of backgrounds It will appeal to historians philosophers as well as logicians and computer scientists who want to engage with topics relevant to the history and philosophy of programming and more specifically the role of programming systems in the foundations of computing *Sustainable Peace in Northeast Asia* Yong-Shik

Lee, 2023-09-05 *Sustainable Peace in Northeast Asia* examines the causes of lasting and complex tensions in the region from underlying political historical military and economic perspectives discusses their historical development and political economic implications for the world and explores possible solutions to build lasting peace The book is unique in that it approaches the topic from the historical perspective of each constituent country in the region Major global powers such as the United States and Russia have also closely engaged in the political and economic affairs of this region through a network of alliances diplomacy trade and investment The book also discusses the influence of these external powers over the crisis their political and economic objectives in the region their strategies and the dynamics that their engagement has created Both South Korea and North Korea have sought reunification of the Korean peninsula which will have a substantial impact on the region The book examines its justification feasibility and effects for the region The book discusses the role of Mongolia in the context of the power dynamics in Northeast Asia A relatively small country in terms of its population Mongolia has rarely been examined in this context *Sustainable Peace in Northeast Asia* makes a fresh assessment of its potential role

Breaking Point Rebecca Schwartz Greene, 2023-01-03 WINNER SOCIETY FOR MILITARY HISTORY DISTINGUISHED BOOK AWARDS FIRST BOOK This book informs the public for the first time about the impact of American psychiatry on soldiers during World War II *Breaking Point* is the first in depth history of American psychiatry in World War II Drawn from unpublished primary documents oral histories and the author's personal interviews and correspondence over years with key psychiatric and military policymakers it begins with Franklin Roosevelt's endorsement of a universal Selective Service psychiatric examination followed by Army and Navy pre and post induction examinations Ultimately 2.5 million men and women were rejected or discharged from military service on neuropsychiatric grounds Never before or since has the United States engaged in such a program In designing Selective Service Medical Circular No. 1 psychiatrist Harry Stack Sullivan

assumed psychiatrists could predict who might break down or falter in military service or even in civilian life thereafter While many American and European psychiatrists questioned this belief and huge numbers of American psychiatric casualties soon raised questions about screening's validity psychiatric and military leaders persisted in 1942 and 1943 in endorsing ever tougher screening and little else Soon families complained of fathers and teens being drafted instead of being identified as psychiatric 4Fs and Blacks and Native Americans among others complained of bias A frustrated General George S Patton famously slapped two malingering neuropsychiatric patients in Sicily a sentiment shared by Marshall and Eisenhower though they favored a tamer style Yet psychiatric rejections evacuations and discharges mounted While psychiatrist Roy Grinker and a few others treated soldiers close to the front in Tunisia in early 1943 this was the exception But as demand for manpower soared and psychiatrists finally went to the field and saw that combat itself not predisposition precipitated breakdown leading military psychiatrists switched their emphasis from screening to prevention and treatment But this switch was too little too late and slowed by a year long series of Inspector General investigations even while numbers of psychiatric casualties soared Ironically despite and even partly because of psychiatrists wartime performance plus the emotional toll of war postwar America soon witnessed a dramatic growth in numbers popularity and influence of the profession culminating in the National Mental Health Act 1946 But veterans with PTSD not recognized until 1980 were largely neglected
