Aquaporins Aquaporins:

Aquaporins Eric Beitz, 2008-12-19 The aquaporin field has matured at an exceptionally fast pace and we are at the verge to develop serious strategies to therapeutically modulate aquaporin function directly or via regulatory networks Key prerequisites are available today i a considerable and growing number of aquaporin crystal structures for the rational design of inhibitory molecules ii elaborate molecular dynamics simulation techniques for theoretical analyses of selectivity mechanisms and docking experiments iii comprehensive data on aquaporin immunohistochemistry iv aquaporin knockout animals for physiological studies and v assay systems for compound library screenings The structure of this volume on aquaporins follows the points laid out above and thus covers the developments from basic research to potential pharmacological use Situated between pharmacology textbooks and recent scientific papers this book provides a timely overview for readers from the fundamental as well as the applied disciplines

Aquaporins Baoxue Yang, 2023-01-30 This book provides a state of the art report on our current understanding of aquaporins and the future direction of the field Aquaporins AQPs are a group of water channel proteins that are specifically permeable to water and other small molecules such as glycerol and urea To date thirteen water channel proteins AQP0 AQP12 have been cloned and the mechanisms and physiological functions of water transport across biological membranes have long been the subject of interest Recent advances in the molecular biology and physiology of water transport have yielded new insights into how and why water moves across cell membranes and studies on aquaporin knockout mouse models suggest that aquaporins are involved in the development of some diseases and they may be useful targets of research into selective inhibitor drugs By focusing on the advances made over the last 30 years in the biophysics genetics protein structure molecular biology physiology pathophysiology and pharmacology of aquaporins in mammalian cell membranes this book provides novel insights into further mechanisms and the physiological significance of water and some small molecule transport in mammals in order to stimulate further research in new directions In the second version fourteen chapters will be updated base on the most recent research articles Ten new chapters will be added

Plant Aquaporins François Chaumont, Stephen D. Tyerman, 2017-02-07 Aquaporins are channel proteins that facilitate the diffusion of water and small uncharged solutes across cellular membranes Plant aquaporins form a large family of highly divergent proteins that are involved in many different physiological processes This book will summarize the recent advances regarding plant aquaporins their phylogeny structure substrate specificity mechanisms of regulation and roles in various important physiological processes related to the control of water flow and small solute distribution at the cell tissue and plant level in an ever changing environment

Aquaporin Regulation Gerald Litwack, 2020-02-13 Aquaporin Regulation Volume 112 the latest release in the Vitamins and Hormones series highlights new advances in the field with this new volume presenting interesting chapters highlighting Perspectives on the evolution of aquaporin superfamily Structure and dynamics of aquaporin 1 Selectivity and Transport in

Role for Aquaporins in the Biology of Encephalitozoon Spp Katherine Wasson, 2005

Sustainable Agriculture Eric Lichtfouse, Mireille Navarrete, Philippe Debaeke, Souchere Véronique, Caroline Alberola, 2009-11-11 Sustainability rests on the principle that we must meet the needs of the present without compromising the ability of future generations to meet their own needs Starving people in poor nations obesity in rich nations increasing food prices on going climate changes increasing fuel and transportation costs flaws of the global market worldwide pesticide pollution pest adaptation and resistance loss of soil fertility and organic carbon soil erosion decreasing biodiversity desertification and so on Despite unprecedented advances in sciences allowing to visit planets and disclose subatomic particles serious terrestrial issues about food show clearly that conventional agriculture is not suited any longer to feed humans and to preserve ecosystems Sustainable agriculture is an alternative for solving fundamental and applied issues related to food production in an ecological way While conventional agriculture is driven almost solely by productivity and profit sustainable agriculture integrates biological chemical physical ecological economic and social sciences in a comprehensive way to develop new farming practices that are safe and do not degrade our environment In that respect sustainable agriculture is not a classical and narrow science Instead of solving problems using the classical painkiller approach that treats only negative impacts sustainable agriculture treats

problem sources As most actual society issues are now intertwined global and fast developing sustainable agriculture will bring solutions to build a safer world This book gathers review articles that analyze current agricultural issues and knowledge then propose alternative solutions It will therefore help all scientists decision makers professors farmers and politicians who wish to build a safe agriculture energy and food system for future generations Membrane Biology and Bioenergetics Mr. Rohit Manglik,2024-06-24 Studies membrane structure transport mechanisms and bioenergetics focusing on ATP synthesis and cellular energy processes in biology **Aquaporins: Dynamic Role and Regulation** Rupesh K. Deshmukh, Henry T. Nguyen, Richard R. Belanger, 2017-10-10 Aquaporins AQP a class of integral membrane proteins form channels facilitating movement of water and many other solutes In solute transport systems of all living organisms including plants animals and fungi AQP play a vital role Plants contain a much higher number of AQP genes compared to animals the likely consequence of genome duplication events and higher ploidy levels As a result of duplication and subsequent diversification plant AQP have evolved several subfamilies with very diverse functions Plant AQP are highly selective for specific solutes because of their unique structural features For instance ar R selectivity filters and NPA domains have been found to be key elements in governing solute permeability through the AQP channels Combination of conserved motifs and specific amino acids influencing pore morphology appears to regulate the permeability of specific solutes such as water urea CO₂ H₂O₂ boric acid silicic acid and many more The discovery of novel AQP has been accelerated over the last few years with the increasing availability of genomic and transcriptomic data The expanding number of well characterised AQP provides opportunities to understand factors influencing water transport nutritional uptake and elemental balance Homology based search tools and phylogenetic analyses offer efficient strategies for AQP identification Subsequent characterization can be based on different approaches involving proteomics genomics and transcriptomic tools The combination of these technological advances make it possible to efficiently study the inter dependency of AQP regulation through phosphorylation and reversible phosphorylation networking with other transporters structural features pH gating systems trafficking and degradation Several studies have supported the role of AQP in differential phenotypic responses to abiotic and biotic stress in plants Crop improvement programs aiming for the development of cultivars with higher tolerance against stresses like drought flooding salinity and many biotic diseases can explore and exploit the finely tuned AQP regulated transport system For instance a promising approach in crop breeding programs is the utilization of genetic variation in AQP for the development of stress tolerant cultivars Similarly transgenic and mutagenesis approaches provide an opportunity to better understand the AQP transport system with subsequent applications for the development of climate smart drought tolerant cultivars The contributions to this Frontiers in Plant Science Research Topic have highlighted the evolution and phylogenetic distribution of AQP in several plant species Numerous aspects of regulation that seek to explain AQP mediated transport system have been addressed These contributions will help to improve our understanding of AQP and their role in important

physiological aspects and will bring AQP research closer to practical applications **The Physiology of Inflammation -**

The Final Common Pathway to Disease Alexandrina Ferreira Mendes, Maria Teresa Cruz, Oreste Gualillo, 2019-02-20

Chronic diseases are increasingly recognized as involving low grade inflammation that is a self perpetuating tissue response to stress caused by exogenous or endogenous triggers that progressively evokes danger associated molecular pattern release ultimately driving tissue damage and loss of function This response is frequently unapparent clinically thus the designation low grade This eBook comprises nineteen reviews and original articles that provide the most updated knowledge on the causes and roles of this inflammatory response in a variety of diseases and conditions The editorial that precedes these articles not only summarizes each one but provides a broader interpretation of the role of inflammation in health and a variety of disease conditions the underlying mechanisms and the targets more promising for therapy Finally it also highlights the most relevant and emerging research topics that are already shaping future directions for the development of more fine tuned and innovative therapies **Basic and Clinical Pharmacology for Medical Graduates** ,2023-11-24

Lo, 2012-03-07 The common idea for many people is that forests are just a collection of trees However they are much more than that They are a complex functional system of interacting and often interdependent biological physical and chemical components the biological part of which has evolved to perpetuate itself This complexity produces combinations of climate soils trees and plant species unique to each site resulting in hundreds of different forest types around the world Logically trees are an important component for the research in forest ecosystems but the wide variety of other life forms and abiotic components in most forests means that other elements such as wildlife or soil nutrients should also be the focal point in ecological studies and management plans to be carried out in forest ecosystems In this book the readers can find the latest research related to forest ecosystems but with a different twist The research described here is not just on trees and is focused on the other components structures and functions that are usually overshadowed by the focus on trees but are equally important to maintain the diversity function and services provided by forests The first section of this book explores

the structure and biodiversity of forest ecosystems whereas the second section reviews the research done on ecosystem structure and functioning The third and last section explores the issues related to forest management as an ecosystem level activity all of them from the perspective of the other parts of a forest *Aquaporins and Hexose Transporters in a Wine Strain of Saccharomyces Cerevisiae* Jonathan Earl Karpel,2006 **Skin Moisturization** Anthony V.
