An Error-dependent Model of Instrument-scanning Behavior in Commercial Airline Pilots D. H. Jones, 1985 A new flexible model of pilot instrument scanning behavior is presented which assumes that the pilot uses a set of deterministic scanning patterns on the pilot s perception of error in the state of the aircraft and the pilot s knowledge of the interactive nature of the aircraft s systems Statistical analyses revealed that a three stage Markov process composed of the pilot s three predicted lookpoints LP occurring 1 30 2 30 and 3 30 of a second prior to each LP accurately modelled the scanning behavior of 14 commercial airline pilots while flying steep turn maneuvers in a Boeing 737 flight simulator The modelled scanning data for each pilot were not statistically different from the observed scanning data in comparisons of mean dwell time entropy and entropy rate These findings represent the first direct evidence that pilots are using deterministic scanning patterns during instrument flight The results are interpreted as direct support for the error dependent model and suggestions are made for further research that could allow for identification of the specific scanning patterns suggested by the model
