pandemic **Resources in Education** ,1998-10 **Trends in Teaching Experimentation in the Life Sciences** Nancy J. Pelaez,Stephanie M. Gardner,Trevor R. Anderson,2022-05-11 This book is a guide for educators on how to develop and evaluate evidence based strategies for teaching biological experimentation to thereby improve existing and develop new curricula It unveils the flawed assumptions made at the classroom department and institutional level about what students are learning and what help they might need to develop competence in biological experimentation Specific case studies illustrate a comprehensive list of key scientific competencies that unpack what it means to be a competent experimental life scientist It includes explicit evidence based guidelines for educators regarding the teaching learning and assessment of biological research competencies The book also provides practical teacher guides and exemplars of assignments and assessments It contains a complete analysis of the variety of tools developed thus far to assess learning in this domain This book contributes to the growth of public understanding of biological issues including scientific literacy and the crucial importance of evidence based decision making around public policy It will be beneficial to life science instructors biology education researchers and science administrators who aim to improve teaching in life science departments Chapters 6 12 14 and 22 are available open access under a Creative Commons Attribution 4 0 International License via link [springer.com](https://www.springer.com) Biology Louis Richard Meeth,1981 *Molecular Mechanisms of Cilia Related Diseases* Joao Goncalves, Sara Carvalhal,Anne-Marie Tassin , Bruno Carmona,2024-05-29 Eukaryotic cilia are evolutionarily conserved microtubule based structures that protrude from the cell surface In vertebrates multiple motile and primary immotile cilia fulfill sensory and motility functions that are critical for embryonic development and the homeostasis of adult tissues Cilia malfunction has been shown to cause a growing number of diseases presenting phenotypes such as brain and skeletal developmental problems intellectual disability blindness infertility obesity and kidney cysts Despite their clinical relevance we are still far from fully understanding the basic biology of these multiple cilia types For example we do not know the molecular compositions of all types of cilia nor how cilia structural and functional diversity is generated Also we are still identifying the genetic causes of ciliopathies and the impact of mutations on ciliary protein function cilia biogenesis maintenance ciliary functions and disease development Understanding all these aspects concerning vertebrate cilia will greatly contribute to the design of innovative therapeutic approaches for cilia related disorders Understanding the basic biology of vertebrate cilia is critical for the understanding of cilia related disorders However there are still many open questions about these organelles For example we do not know the proteomes and protein interaction networks specific of each cilium type Also the function of ciliary proteins is often studied mostly in vitro and in the context of primary cilia This limits our possibility to answer questions like why does a certain disease mutation affect only certain types of cilia in specific tissues Therefore this Research Topic aims to address these issues and focus on the latest findings on the basic biology of vertebrate cilia such as their molecular composition and biogenesis pathways and also on advances on our understanding of the molecular mechanisms of ciliopathies The goal of this Research Topic is to

cover novel research focused on furthering our understanding on the molecular mechanisms underlying the development of cilia associated diseases Areas to be covered in this Research Topic may include but are not limited to Identification of novel cilia related diseases Genetic causes of ciliopathies Molecular mechanisms of disease and development of therapeutic approaches Molecular composition of vertebrate cilia Molecular mechanisms of vertebrate cilia biogenesis and multiple functions Original research articles as well as review articles are welcomed
