Soil Colloids Fernando V. Molina, 2016-04-19 Within the field of soil science soil chemistry encompasses the different chemical processes that take place including mineral weathering humification of organic plant residues and ionic reactions involving natural and foreign metal ions that play significant roles in soil Chemical reactions occur both in the soil solution and at the soil part

The Properties of Energetic Materials Mohammad Hossein Keshavarz, Thomas M. Klapötke, 2017-11-20 For a chemist who is concerned with the synthesis of new energetic compounds it is essential to be able to assess physical and thermodynamic properties as well as the sensitivity of possible new energetic compounds before synthesis is attempted Various approaches have been developed to predict important aspects of the physical and thermodynamic properties of energetic materials including but not limited to crystal density heat of formation melting point enthalpy of fusion and enthalpy of sublimation of an organic energetic compound Since an organic energetic material consists of metastable molecules capable of undergoing very rapid and highly exothermic reactions many methods have been developed to estimate the sensitivity of an energetic compound with respect to detonation causing external stimuli such as heat friction impact shock and electrostatic discharge This book introduces these methods and demonstrates those methods which can be easily applied

Functionally Relevant Macromolecular Interactions of Disordered Proteins Istvan Simon, 2021-01-20 Disordered proteins are relatively recent newcomers in protein science They were first described in detail by Wright and Dyson in their J Mol Biol paper in 1999 First it was generally thought for more than a decade that disordered proteins or disordered parts of proteins have different amino acid compositions than folded proteins and various prediction methods were developed based on this principle These methods were suitable for distinguishing between the disordered unstructured and structured proteins known at that time In addition they could predict the site where a folded protein binds to the disordered part of a protein shaping the latter into a well defined 3D structure Recently however evidence has emerged for a new type of disordered protein family whose members can undergo coupled folding and binding without the involvement of any folded proteins Instead they interact with each other stabilizing their structure via mutual synergistic folding and surprisingly they exhibit the same residue composition as the folded protein Increasingly more examples have been found where disordered proteins

interact with non protein macromolecules adding to the already large variety of protein protein interactions There is also a very new phenomenon when proteins are involved in phase separation which can represent a weak but functionally important macromolecular interaction These phenomena are presented and discussed in the chapters of this book **Chemical**

Product Design E. L. Cussler,G. D. Moggridge,2011-05-12 The chemical industry is changing going beyond commodity chemicals to a palette of higher value added products This groundbreaking book now revised and expanded documents this change and shows how to meet the challenges implied Presenting a four step design process needs ideas selection manufacture the authors supply readers with a simple design template that can be applied to a wide variety of products Four new chapters on commodities devices molecules drugs and microstructures show how this template can be applied to products including oxygen for emphysema patients pharmaceuticals like taxol dietary supplements like lutein and beverages which are more satisfying For different groups of products the authors supply both strategies for design and summaries of relevant science Economic analysis is expanded emphasizing the importance of speed to market selling ideas to investors and an expectation of limited time in the market Extra examples homework problems and a solutions manual are available
