Army Technical Manual Tm 5 855 1:

Modern Protective Structures Theodor Krauthammer, 2008-02-01 In today's world reasonably predictable military operations have been replaced by low intensity conflicts less predictable terrorist activities carried out by determined individuals or small groups that possess a wide range of backgrounds and capabilities. Because of the threats posed by this evolving type of warfare civil engineers and emergency personnel face new challenges in designing facilities to protect lives and property and in conducting effective rescue operations and forensic investigations. Addressing these needs *Modern Protective Structures* develops realistic guidelines for the analysis, design, assessment, retrofit, and research of protected facilities. After introducing a comprehensive risk management approach, the author provides a general background on explosive devices and their capabilities as well as explosive effects and the processes that generate them. He then discusses the effects of conventional and nuclear explosions. The book subsequently considers the significant design differences between conventional and nuclear loads and between existing design procedures and state of the art information from recent research. It also summarizes existing blast resistant design approaches and describes the dynamic responses of structural systems to blasts, shocks, and impacts. Additional coverage includes the behavior of specific structural connections, the traditional concept of P-I diagrams and progressive collapse. The book concludes with a systematic and balanced protective design approach. Tackling the analytical design assessment and hazard mitigation issues associated with short duration dynamic loads, this book examines how impulsive loads affect various types of buildings and facilities. It provides the necessary material to help ensure the safety of persons, assets, and projects.

Research Hong Hao,Zhong-Xian Li,2012-08-17 The International Association of Protective Structures IAPS was launched on
 1 October 2010 in Manchester UK during the first International Conference of Protective Structures The primary purpose of
 IAPS is to bring researchers and engineers working in the area of protective structures together and to promote research
 and development work for better life and structure protection against shock and impact loads More information can be found
 at <http://www.protectivestructures.org/contact.html> Advances in Protective Structures Research is the first publication in a
 series of planned publications by IAPS It contains 13 chapters prepared by active and prominent researchers around the
 world in the area of protective structures It covers the dynamic material model and material properties structural response
 analysis structural reliability analysis impact loads and ground shock The contents of the book reflect well the current
 research achievements and practice in structural protection against blast and impact loads They represent the advanced
 international research status in theoretical derivations numerical simulations and laboratory and field tests for structure

Dynamics: Engineering Models And Methods Gabi Ben-dor,Tov Elperin,Anatoly Dubinsky,2013-06-07 This important
 monograph is the first comprehensive compendium of engineering models used in high speed penetration mechanics The
 book consists of two parts The first part more than a quarter of the book s content is in fact a handbook giving a very detailed
 summary of the engineering models used for the analysis of high speed penetration of rigid projectiles into various media
 concrete metals geological media The second part of the book demonstrates the possibilities and efficiency of using
 approximate models for investigating traditional and nontraditional problems of penetration mechanics Different chapters in
 the books are devoted to different classes of problems and can be read independently Each chapter is self contained which
 includes a comprehensive literature survey of the topic and carries a list of used notations The bibliography includes more
 than 700 references This monograph is a reliable and indispensable reference guide for anyone interested in using
 engineering models in high speed penetration mechanics *Public Transportation Security* ,2002 These volumes focus on

the concerns that transit agencies are addressing when developing programs in response to the terrorist attacks of September 11 2001 and the anthrax attacks that followed Future volumes of the report will be issued as they are completed
