Personalized Orthopedics Osiris Canciglieri Junior,Miroslav D. Trajanovic,2022-05-25 This book covers the most important topics in the field of personalized orthopedics It starts with the 3D geometry of the bones focusing on the problem of reverse engineering of the bones It also shows the application of a 3D geometric model of bone for the design of personalized implants and prostheses This book covers the application of additive technologies in personalized orthopedics as well as prediction simulation and optimization in personalized orthopedics Its content provides the necessary knowledge for the transition from classical to personalized orthopedics The authors present an original method for reverse bone engineering the Method of Anatomical Features MAF This method is unique as it enables the reconstruction of the original geometry and topology of the bone even when only data on its part are available The application of this method is shown on the examples of human long bones mandible and hip bone reconstruction This book contains a review of several real cases of personalized implants It gives several examples of prostheses for the design of which a 3D model of bones was used as well as other patient data on the basis of which personalized prostheses were designed

Low Back Pain and Sciatica Luigi Tesio,2025-01-16 Chronic benign back pain with or without sciatica is a descriptive diagnosis hiding the mechanisms leading to this symptom The literature still refers to it as a non specific disease Not surprisingly both conservative and invasive treatments are inconsistent and highly subjective The book aims to highlight the main pathogenetic mechanisms leading to pain based on a thorough analysis of the lumbar spine anatomy and mechanics including its vascular content and a selection of published evidence converging towards an original integrated model The result is a downgrading of back pain from a non specific disease to a symptom and clarifying the underlying causes The book presents an original pathogenetic model named CoVIn Compressive Venous Inflammatory The cornerstones of the model are

a the compression of nerve endings within the narrow spinal canal from disc herniation or arthritic spurs b local inflammation caused by discal material and or local phlebitis and most importantly c venous congestion of the Batson epidural plexus The model explains the diversity of the clinical pictures e g pain at rest vs pain during spinal loading pain unrelated to the severity of MRI or CT imaging changes of pain spontaneous or caused by treatments with no changes in imaging and others Consistent with the model a few physiotherapy treatments are proposed to widen the spinal canal and decongest local veins These are flexor lumbar exercises water exercises and first choice Active Lumbar Traction former Autotractor Treatments targeting pain become a second choice approach Surgery is shown to be rational only after conservative treatments fail Other rare causes of back pain unrelated to the CoVin model are overviewed and discussed The book will interest Physical Medicine and Rehabilitation Physicians Physiotherapists Orthopedic and Trauma Surgeons Neurosurgeons Rheumatologists Neurologists and Family physicians
