

Robot evolution: Artificial intelligence by artificial evolution

EVOSPHERE

The long-term vision of robot evolution foresees a radically new robotic technology where robots can reproduce, evolve, and learn

Embodied Intelligence

Building intelligent machines is a longstanding grand challenge in artificial intelligence (AI). Traditionally, in the 20th century, AI was concerned with thinking machines, e.g., for chess- playing or medical diagnosis. The focus nowadays is broader: intelligent behaviour is not limited to thinking but also includes acting. Thus, the AI challenge of the 21st century is to make intelligent machines with agency – robots for short– operating in a physical environment rather than just making calculations. The number of possible applications, operational environments, and tasks to be performed by robots is countless. However, while designing and optimizing robots is a hard task, a methodology or set of tools to conduct research and to explore the design space of bodies is still lacking.

The Art of Artificial Evolution Juan J. Romero, Penousal Machado, 2007-11-13 Art is the Queen of all sciences communicating knowledge to all the generations of the world Leonardo da Vinci Artistic behavior is one of the most valued qualities of the human mind Although artistic manifestations vary from culture to culture dedication to artistic tasks is common to all In other words artistic behavior is a universal trait of the human species The current Western definition of art is relatively new However a dedication to artistic endeavors such as the embellishment of tools body ornamentation or gathering of unusual arguably aesthetic objects can be traced back to the origins of humanity That is art is ever present in human history and prehistory Art and science share a long and enduring relationship The best known example of the exploration of this relationship is probably the work of Leonardo da Vinci Somewhere in the 19th century art and science grew apart but the cross transfer of concepts between the two domains continued to exist Currently albeit the need for specialization there is a growing interest in the exploration of the connections between art and science Focusing on computer science it is interesting to note that early pioneers of this discipline such as Ada Byron and Alan Turing showed an interest in using computational devices for art making purposes Oddly in spite of this early interest and the ubiquity of art it has received relatively little attention from the computer science community in general and more surprisingly from the artificial intelligence community

Artificial Evolution Evelyne Lutton, Pierrick Legrand, Pierre Parrend, Nicolas Monmarché, Marc Schoenauer, 2018-03-22 This book constitutes the thoroughly refereed post conference proceedings of the 13th International Conference on Artificial Evolution EA 2017 held in Paris France in October 2017 The 16 revised papers were carefully reviewed and selected from 33 submissions The papers cover a wide range of topics in the field of artificial evolution such as evolutionary computation evolutionary optimization co evolution artificial life population dynamics theory algorithmics and modeling implementations application of evolutionary paradigms to the real world industry biosciences other biologically inspired paradigms swarm artificial ants artificial immune systems cultural algorithms memetic algorithms multi objective optimisation constraint handling parallel algorithms dynamic optimization machine learning and hybridization with other soft computing techniques

Artificial Evolution Pierre Collet, Cyril Fonlupt, Jin-Kao Hao, Evelyne Lutton, Marc Schoenauer, 2003-08-01 The Evolution Artificial cycle of conferences was originally initiated as a forum for the French speaking evolutionary computation community Previous EA meetings were held in Toulouse EA 94 Brest EA 95 LNCS 1063 Nîmes EA 97 LNCS 1363 Dunkerque EA 99 LNCS 1829 and finally EA 2001 was hosted by the Université de Bourgogne in the small town of Le Creusot in an area of France renowned for its excellent wines However the EA conferences have been receiving more and more papers from the international community this conference can be considered fully international with 39 submissions from non francophonic countries on all five continents out of a total of 68 Out of these 68 papers only 28 were presented orally 41% due to the formula of the conference single session with presentations of 30 minutes that all

participants seem to appreciate a lot The Organizing Committee wishes to thank the members of the International Program Committee for their hard work mainly due to the large number of submissions and for the service they rendered to the community by ensuring the high scientific content of the papers presented Actually the overall quality of the papers presented was very high and all 28 presentations are included in this volume grouped in 8 sections which more or less reflect the organization of the oral session 1 Invited Paper P Bentley gave a great talk on his classification of interdisciplinary collaborations and showed us some of his work with musicians and biologists Artificial Evolution Stéphane Bonnevey, Pierrick Legrand, Nicolas Monmarché, Evelyne Lutton, Marc Schoenauer, 2016-03-22 This book constitutes the thoroughly refereed post conference proceedings of the 12th International Conference on Artificial Evolution EA 2015 held in Lyon France in October 2015 The 18 revised papers were carefully reviewed and selected from 31 submissions The focus of the conference is on following topics Evolutionary Computation Evolutionary Optimization Co evolution Artificial Life Population Dynamics Theory Algorithmics and Modeling Implementations Application of Evolutionary Paradigms to the Real World Dynamic Optimization Machine Learning and hybridization with other soft computing techniques **Artificial Evolution** Nicolas Monmarché, El-Ghazali Talbi, Pierre Collet, Marc Schoenauer, Evelyne Lutton, 2008-05-06 This post conference proceedings volume covers all aspects of artificial evolution including genetic programming swarm intelligence combinatorial and multi objective optimization as well as theory and applications **Artificial Evolution** Cyril Fonlupt, 2000 This book constitutes the thoroughly refereed post conference proceedings of the 4th European Conference on Artificial Evolution AE 99 held in Dunkerque France in November 1999 The 20 revised full papers presented together with one invited paper were carefully selected during two rounds of reviewing from initially more than 40 papers submitted The book is divided in topical sections on genetic operators and theoretical models applications agents and cooperation and heuristics and outlook **Artificial Evolution** Jean-Marc Alliot, Evelyne Lutton, Edmund Ronald, 2014-01-15 **Artificial Evolution** Pierre Liardet, Pierre Collet, Cyril Fonlupt, Evelyne Lutton, Marc Schoenauer, 2004-05-14 This book constitutes the thoroughly refereed post proceedings of the 6th International Conference on Artificial Evolution EA 2003 held in Marseilles France in October 2003 The 32 revised full papers presented were carefully selected and improved during two rounds of reviewing and revision The papers are organized in topical sections on theoretical issues algorithmic issues applications implementation issues genetic programming coevolution and agent systems artificial life and cellular automata **From Artificial Evolution to Artificial Life** Taylor Timothy John, 1999 Artificial Evolution Pierre Collet, Nicolas Monmarché, Pierrick Legrand, Marc Schoenauer, Evelyne Lutton, 2010-06-27 Annotation This book constitutes the proceedings of the 9th International Conference on Artificial Evolution held in Strasbourg France in October 2009 **Artificial Evolution** Jin-Kao Hao, 1998-02-18 The volume presents a survey of the state of the art in artificial evolution covering theoretical issues methodologies and applications in various areas including genetic algorithm operators and evolvable hardware and robotics

million years But in just the past 200 years we've hacked the process so that even the slowest and stupidest among us can move faster than a cheetah fly higher than an eagle and perform miracles of science that would have dazzled Einstein But instead of elevating humanity to unparalleled enlightenment technology has given us a sense of unparalleled entitlement We act as though each new gain in comfort convenience and security not only makes our lives better but also makes us better It is a dangerous delusion Based on a combination of research and personal experience including resuscitating a vintage rotary phone flying around the world on the Concorde and fishing in a stream of industrial waste called Stink Run author Rob Sneddon builds a case that progress is a runaway train and the engineer is too busy texting to notice *Artificial Evolution*

Advances in Artificial Life Dario Floreano, Jean-Daniel Nicoud, Francesco Mondada, 1999-09-01 No matter what your perspective is what your goals are or how experienced you are Artificial Life research is always a learning experience The variety of phenomena that the people who gathered in Lausanne reported and discussed for the fifth time since 1991 at the European Conference on Artificial Life ECAL has not been programmed crafted or assembled by analytic design It has evolved emerged or appeared spontaneously from a process of artificial evolution self organisation or development Artificial Life is a field where biological and artificial sciences meet and blend together where the dynamics of biological life are reproduced in the memory of computers where machines evolve behave and communicate like living organisms where complex life like entities are synthesised from electronic chromosomes and artificial chemistries The impact of Artificial Life in science philosophy and technology is tremendous Over the years the synthetic approach has established itself as a powerful method for investigating several complex phenomena of life From a philosophical standpoint the notion of life and of intelligence is continuously reformulated in relation to the dynamics of the system under observation and to the embedding environment no longer a privilege of carbon based entities with brains and eyes At the same time the possibility of engineering machines and software with life like properties such as evolvability self repair and self maintenance is gradually becoming reality bringing new perspectives in engineering and applications *Evolution, Complexity and*

Artificial Life Stefano Cagnoni, Marco Mirolli, Marco Villani, 2013-12-21 Evolution and complexity characterize both biological and artificial life by direct modeling of biological processes and the creation of populations of interacting entities from which complex behaviors can emerge and evolve This edited book includes invited chapters from leading scientists in the fields of artificial life complex systems and evolutionary computing The contributions identify both fundamental theoretical issues and state of the art real world applications The book is intended for researchers and graduate students in the related domains
