Warikandwa, Tapiwa Victor, Nhemachena, Artwell, 2019-02-06 The emergent so called Fourth Industrial Revolution is regarded by some as a panacea for bringing about development to Africans This book dismisses this flawed reasoning Surfacing how investors are actually looting and plundering Africa how the industrial internet of things the gig economies digital economies and cryptocurrencies breach African political and economic sovereignty the book pioneers what can be called anticipatory economics which anticipate the future of economies It is argued that the future of Africans does not necessarily require degrowth postgrowth postdevelopment postcapitalism or sharing solidarity economies it requires attention to age old questions about African ownership and control of their resources Investors have to invest in ensuring that Africans own and control their resources Further it is pointed out that the historical imperial structural creation of forced labour is increasingly morphing into what we call the structural creation of forced leisure which is no less lethal for Africans Because both the structural creation of forced labour and the structural creation of forced leisure are undergirded by transnational neo imperial plunder theft robbery looting and dispossession of Africans this book goes beyond the simplistic arguments that Euro America developed due to the industrial revolutions *Career Guidance for Social Justice* Tristram Hooley, Ronald Sultana, Rie Thomsen, 2017-11-22 This edited collection examines the intersections between career guidance

Artificial Intelligence Jerry Kaplan,2016 Over the coming decades Artificial Intelligence will profoundly impact the way we live work wage war play seek a mate educate our young and care for our elderly It is likely to greatly increase our aggregate wealth but it will also upend our labor markets reshuffle our social order and strain our private and public institutions Eventually it may alter how we see our place in the universe as machines pursue goals independent of their creators and outperform us in domains previously believed to be the sole dominion of humans Whether we regard them as conscious or unwitting revere them as a new form of life or dismiss them as mere clever appliances is beside the point They are likely to play an increasingly critical and intimate role in many aspects of our lives The emergence of systems capable of independent reasoning and action raises serious questions about just whose interests they are permitted to serve and what limits our society should place on their creation and use Deep ethical questions that have bedeviled philosophers for ages will suddenly arrive on the steps of our courthouses Can a machine be held accountable for its actions Should intelligent systems enjoy independent rights and responsibilities or are they simple property Who should be held responsible when a self driving car kills a pedestrian Can your personal robot hold your place in line or be compelled to testify against you If it turns out to be possible to upload your mind into a machine is that still you The answers may surprise you
