Postmortal Society Michael Hviid Jacobsen, 2017-03-31 Throughout history mankind has struggled to reconcile itself with the inescapability of its own mortality This book explores the themes of immortality and survivalism in contemporary culture shedding light on the varied and ingenious ways in which humans and human societies aspire to confront and deal with death or even seek to outlive it as it were Bringing together theoretical and empirical work from internationally acclaimed scholars across a range of disciplines *Postmortal Society* offers studies of the strategies adopted and means available in modern society for trying to cheat death or prolong life the status of the dead in the modern Western world the effects of beliefs that address the terror of death in other areas of life the immortalisation of celebrities the veneration of the dead in virtual worlds symbolic immortality through work the implications of understanding immortality in chemical neuronal terms and the apparent paradox of our greater reverence for the dead in increasingly secular capitalist societies A fascinating collection of studies that explore humanity's attempts to deal with its own mortality in the modern age this book will appeal to sociologists anthropologists philosophers and scholars of cultural studies with interests in death and dying

[Death within the Text](#) Adriana Teodorescu, 2019-03-13 The book tackles the challenging theme of death as seen through the lens of literature and its connections with history the visual arts anthropology philosophy and other fields in humanities It searches for answers to three questions what can we know about death how is death socialised and how and for which purposes is death aesthetically shaped Unlike many other publications the volume does not endorse the fallacy of over simplifying death by seeing it either in an exclusively positive light or by reducing it to a purely literary figure Using literature's potential to stimulate critical thinking many contemporary stereotypical configurations of death and dying are debunked and many hitherto unforeseen ways in which death functions as a complex trigger of meaning making are revealed The book proves that death is an inexhaustible source of meanings which should be understood as peremptorily plural discontinuous problematic competitive and often conflictual It offers original contributions to the field of death studies and also to literary and cultural studies

Age and Ageing in Contemporary Speculative and Science Fiction Sarah Falcus, Kate de Medeiros, Maricel Oró-Piqueras, 2023-02-09 Focusing on the

contemporary period this book brings together critical age studies and contemporary science fiction to establish the centrality of age and ageing in dystopian speculative and science fiction imaginaries Analysing texts from Europe North America and South Asia as well as television programmes and films the contributions range from essays which establish genre based trends in the representation of age and ageing to very focused studies of particular texts and concerns As a whole the volume probes the relationship between speculative science fiction and our understanding of what it is to be a human in time the time of our own lives and the times of both the past and the future Our Grandchildren Redesigned Michael Bess, 2016-09-06 A panoramic overview of biotechnologies that can endlessly boost human capabilities and the drastic changes these superhuman traits could trigger Biotechnology is moving fast In the coming decades advanced pharmaceuticals bioelectronics and genetic interventions will be used not only to heal the sick but to boost human physical and mental performance to unprecedented levels People will have access to pills that make them stronger and faster informatic devices will interface seamlessly with the human brain and epigenetic modification may allow people to reshape their own physical and mental identities at will Until recently such major technological watersheds like the development of metal tools or the industrialization of manufacturing came about incrementally over centuries or longer People and social systems had time to adapt they gradually developed new values norms and habits to accommodate the transformed material conditions But contemporary society is dangerously unprepared for the dramatic changes it is about to experience down this road on which it is already advancing at an accelerating pace The results will no doubt be mixed People will live longer healthier lives will fine tune their own thought processes and will generate staggeringly complex and subtle forms of knowledge and insight But these technologies also threaten to widen the rift between rich and poor to generate new forms of social and economic division and to force people to engage in constant cycles of upgrades and boosts merely to keep up Individuals who boost their traits beyond a certain threshold may acquire such extreme capabilities that they will no longer be recognized as unambiguously human In this important and timely book prize winning historian Michael Bess provides a clear nontechnical overview of cutting edge biotechnology and paints a vivid portrait of a near future society in which bioenhancement has become a part of everyday life He surveys the ethical questions raised by the enhancement enterprise and explores the space for human agency in dealing with the challenges that these technologies will present Headed your way over the coming decades new biotechnologies that can powerfully alter your body and mind The possibilities are tantalizing Rejuvenation therapies offering much longer lives 160 and even beyond in full vigor and mental acuity Cognitive enhancement through chemical or bioelectronic means the rough equivalent of doubling or tripling IQ scores Epigenetic tools for altering some of your genetically influenced traits at any point in your lifetime body shape athletic ability intelligence personality Bioelectronic devices for modulating your own brain processes including your pleasure centers a potentially non stop high Direct control of machines by thought and perhaps direct communication with other people brain to brain a new

dimension of sharing and intimacy But some of the potential consequences are also alarming A growing rift between the biologically enhanced and those who can't afford such modifications A constant cycle of upgrades and boosts as the bar of normal rises ever higher Humans 95 Humans XP Humans 8 The fragmentation of humankind into rival bioenhancement clusters A gradually blurring boundary between person and product Extreme forms of self modification with some individuals no longer recognized as unambiguously human

The Secularization of Medicine Nathan Carlin, Director of the McGovern Center for Humanities and Ethics Samuel Karff Chair Nathan Carlin, 2025-08-29 While it is true that medicine and religion once had overt connections that have since declined The Secularization of Medicine argues that religion as a social force in medicine has not been extinguished Instead religious material or ideas have migrated to non religious or secular spaces and have been absorbed by the surrounding culture Medicine is not as secular as we might imagine it to be and this has implications for the well being of physicians

Death Aaron Aquilina, 2023-05-18 Through examination of the death penalty in literature Aaron Aquilina contests Heidegger's concept of being towards death and proposes a new understanding of the political and philosophical subject. Dickens, Nabokov, Hugo, Sophocles and many others explore capital punishment in their works from *Antigone* to *Invitation to a Beheading*. Using these varied case studies Aquilina demonstrates how they all highlight two aspects of the experience. First they uncover a particular state of being or more precisely non-being that comes with a death sentence and second they reveal how this state exists beyond death row as sovereignty and alterity are by no means confined to a prison cell. In contrast to Heidegger's being towards death which individualizes the subject only I can die my own death supposedly this book argues that when condemned to death the self and death collide putting under erasure the category of subjectivity itself. Be it death row or not when the supposed futurity of death is brought into the here and now we encounter what Aquilina calls relational death. Living on with death severs the subject's relation to itself, the other and political sociality as a whole rendering the human less a named and recognizable being than an anonymous living corpse, a human thing. In a sustained engagement with Blanchot, Levinas, Hegel, Agamben and Derrida *The Ontology of Death* articulates a new theory of the subject beyond political subjectivity defined by sovereignty and beyond the Heideggerian notion of ontological selfhood.

Earthly Immortalities Peter Moore, 2019-06-15 In this thought provoking book Peter Moore examines the often overlooked issues concerning human mortality, the fragile ways in which the dead can be said to live on in earthly terms through their children, their work, the memories of others, their possessions and even their bodies. Such earthly immortalities raise a host of fascinating questions about our attitudes toward life and toward the world we leave behind us when we die. To what extent does the meaning we find in our lives depend upon the assumption there will always be a new generation to continue the human adventure? What would it be like if science were able to extend life indefinitely and is this something already enshrined in the doctrine of reincarnation? Can we solve our anxieties about mortality by learning that life is worth living precisely because we do not live forever? In a generous and eloquent account these and more are the questions *Earthly Immortalities* seeks to answer.

Truly Human Enhancement Nicholas Agar, 2013-12-13 A nuanced discussion of human enhancement that argues for enhancement that does not significantly exceed what is currently possible for human beings. The transformative potential of genetic and cybernetic technologies to enhance human capabilities is most often either rejected on moral and prudential grounds or hailed as the future salvation of humanity. In this book Nicholas Agar offers a more nuanced view making a case for moderate human enhancement improvements to attributes and abilities that do not significantly exceed what is currently possible for human beings. He argues against radical human enhancement or improvements that greatly exceed current human capabilities. Agar explores notions of transformative change and motives for human enhancement, distinguishes between the instrumental and intrinsic value of enhancements, argues that too much enhancement undermines human identity, considers the possibility of cognitively enhanced scientists and argues against

radical life extension Making the case for moderate enhancement Agar argues that many objections to enhancement are better understood as directed at the degree of enhancement rather than enhancement itself Moderate human enhancement meets the requirement of truly human enhancement By radically enhancing human cognitive capabilities by contrast we may inadvertently create beings post persons with moral status higher than that of persons If we create beings more entitled to benefits and protections against harms than persons Agar writes this will be bad news for the unenhanced Moderate human enhancement offers a more appealing vision of the future and of our relationship to technology **Death in Contemporary**
