**Origins, Imitation, Conventions** James S. Ackerman,2024-03-19 Twelve studies by eminent art historian James S Ackerman This collection contains studies written by art historian James Ackerman over the past decade Whereas Ackerman's earlier work assumed a development of the arts as they responded to social economic political and cultural change his recent work reflects the poststructural critique of the presumption of progress that characterized Renaissance and modernist history and criticism In this book he explores the tension between the authority of the past which may act not only as a restraint but as a challenge and stimulus and the potentially liberating gift of invention He examines the ways in which artists and writers on art have related to ancestors and to established modes of representation as well as to contemporary experiences The origins studied here include the earliest art history and criticism the beginnings of architectural drawing in the Middle Ages and Renaissance Leonardo Da Vinci's sketches for churches the first in the Renaissance to propose supporting domes on sculpted walls and piers and the first architectural photographs Imitation refers to artistic achievements that in part depended on the imitation of forms established in practices outside the fine arts such as ancient Roman rhetoric and print media Conventions like language facilitate communication between the artist and viewer but are both more universal understood across cultures and more fixed resisting variation that might diminish their clarity The three categories are closely linked throughout the book as most acts of representation partake to some degree of all three

Merrett,1990      **Intelligent Tutoring Systems** Claude Frasson,Gilles Gauthier,1992-05-27 This volume of the Encyclopaedia offers a systematic introduction and a comprehensive survey of the theory of complex spaces It covers topics like semi normal complex spaces cohomology the Levi problem  $q$  convexity and  $q$  concavity It is the first survey of this kind The authors are internationally known outstanding experts who developed substantial parts of the field The book contains seven chapters and an introduction written by Remmert describing the history of the subject The book will be very useful to graduate students and researchers in complex analysis algebraic geometry and differential geometry Another group of readers will consist of mathematical physicists who apply results from these fields
